Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other qeographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit, Prices Division,

Statistics Canada, Ottawa, K1A 016 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montréal	(283-5725)	Edmonton	(495-3027)

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolinque et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Sous-section de l'information et de l'analyse courante, Division des prix,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9606) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montréal	(283-5725)	Edmonton	(495-3027)

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
 - nil or zero.
- -- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 016.

This publication was prepared under the direction of:

- Barbara J. Slater, Director, Prices Division
- . J. Arthur Ridgeway, Chief, Consumer Prices Section
- Harold Harnarine, Head,
 Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
 - néant ou zéro.
- -- nombres infimes.

YMARE!!

- p nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 016.

HIGHLIGHTS

Consumer Price Behaviour

First Quarter, 1988

In seasonally adjusted terms, the All-items Consumer Price Index (CPI) for Canada rose by 0.9% between December 1987 and March 1988 (first quarter). This change was slightly lower than the rise of 1.0%, noted between September and December 1987 (fourth quarter). A large part of the seasonally-adjusted increase in the latest quarter was concentrated in the month of March.

In unadjusted terms, the CPI advanced by 1.1% in the latest quarter compared to an increase of 0.9%, registered in the fourth quarter 1987. The averages of the year-to-year increases for the three months of the fourth quarter of 1987 and the first quarter of 1988 were respectively 4.2% and 4.1%, again indicating relatively stable rates of inflation.

Major Contributors to the First Quarter Change

In unadjusted terms, the All-items index advanced by 1.1% in the first quarter 1988. This increase was comprised of advances of 0.6% in the Food index and 1.3% in the All-items excluding Food index.

By far, the largest proportion (40%) of the latest increase in the CPI resulted from a rise of 1.1% in the Housing index. The Clothing index (up 2.5%) and the Tobacco Products and Alcoholic Beverages index (up 2.9%) each contributed about 18% to the latest increase, while advances in the Food index of 0.6% and in the Recreation, Reading and Education index of 1.4% each contributed slightly more than 10%. The Transportation index fell by 0.1%.

The Housing index rose by 1.1% in the latest quarter, as significant increases were observed in rented and owned accommodation charges. In the case of owned accommodation, most of the increase was concentrated in higher mortgage interest costs and new house prices, with the latter concentrated in larger urban centres of Ontario and Québec. The Household Operation index advanced by 2.4%, as higher long-distance telephone charges, postal rates and child care expenses were reported. The index for Water, Fuel and Electricity also rose by 1.7%. In addition, higher prices were noted for selected household furniture, textiles and equipment.

The Tobacco Products and Alcoholic Beverages index advanced by 2.9%, as a result of increases of 1.6% in the Tobacco Products index and 3.7% in the Alcoholic Beverages index. In this period, prices of alcoholic beverages purchased from stores rose noticeably faster than the prices of such beverages purchased in licensed premises. This was traceable to the January 1st increase in the Federal excise taxes, to higher brewery charges and to changes in the exchange rate (particularly with respect to imported wines).

A rise of 2.5% in the Clothing index was largely assignable to increases of 2.4% in the Women's Wear index and 2.8% in the Men's Wear index. The former rose largely in response to higher prices for coats and dresses, while the increase in the latter was the result of higher prices for coats, jackets, suits and dress shirts.

FAITS SAILLANTS

Comportement des prix à la consommation

Premier trimestre de 1988

Après désaisonnalisation, l'indice d'ensemble des prix à la consommation (IPC) pour le Canada a augmenté de 0.9% entre décembre 1987 et mars 1988 (premier trimestre). Cette hausse est légèrement inférieure à l'augmentation de 1.0% observée pour la période allant de septembre à décembre 1987 (quatrième trimestre). Pour le premier trimestre, une grande partie de la hausse désaisonnalisée a été enregistrée en mars.

Avant désaisonnalisation, l'IPC a progressé de 1.1% comparativement à un accroissement de 0.9% au quatrième trimestre de 1987. Les majorations moyennes d'une année à l'autre pour le quatrième trimestre de 1987 et le premier trimestre de 1988 ont été respectivement de 4.2% et de 4.1%. On peut en conclure que le taux d'inflation est relativement stable.

Principales causes de la variation du premier trimestre

Avant désaisonnalisation, l'indice d'ensemble s'est accru de 1.1% au premier trimestre de 1988. Cette hausse comprend une progression de 0.6% de l'indice des aliments et de 1.3% de l'indice d'ensemble sans les aliments.

La plus qrande partie (40%) de la dernière variation de l'IPC s'explique par un accroissement de 1.1% de l'indice de l'habitation. L'indice de l'habitlement (en hausse de 2.5%) et l'indice des produits du tabac et des boissons alcoolisées (en hausse de 2.9%) ont contribué chacun dans une proportion de 18% à cette variation tandis que, pour l'indice des aliments (en hausse de 0.6%) et celui des loisirs, de la lecture et de la formation (en hausse de 1.4%), cette proportion a dépassé légèrement 10%. L'indice des transports a régressé de 0.1%.

L'indice du logement s'est élevé de 1.1% au cours du dernier trimestre, des augmentations importantes ayant été relevées pour les frais de logement en propriété et en location. En ce qui concerne le logement en propriété, l'accroissement s'explique en majeure partie par une majoration des intérêts hypothécaires et une hausse du prix des maisons neuves, laquelle a été davantage observée dans les grands centres urbains de l'Ontario et du Québec. L'indice des dépenses de ménage s'est accru de 2.4%, les frais d'appels interurbains, les tarifs postaux et les frais pour les soins d'enfants ayant augmenté. Par ailleurs, l'indice de l'eau, du combustible et de l'électricité a progressé de 1.7%. De plus, des prix plus élevés ont été observés pour certains articles d'ameublement, articles ménagers en matière textile et articles d'équipement ménager.

L'indice des produits du tabac et des boissons alcoolisées s'est relevé de 2.9%, des augmentations de 1.6% et de 3.7% ayant été observées respectivement pour l'indice des produits du tabac et celui des boissons alcoolisées. Au cours du trimestre, les prix des boissons alcoolisées achetées dans des magasins ont progressé beaucoup plus rapidement que ceux des boissons alcoolisées servies dans des débits de boisson. Les trois facteurs suivants expliquent ces hausses : augmentation de la taxe d'accise fédérale le 1^{er} janvier, progression des frais demandés par les brasseries et variations du taux de change (particulièrement en ce qui concerne les vins importés).

La progression de 2.5% de l'indice de l'habillement est grandement attribuable à des hausses de 2.4% de l'indice des vêtements pour femmes et de 2.8% de celui des vêtements pour hommes. Le premier s'est accru principalement en raison de prix plus élevés demandés pour les manteaux et les robes, quant au second, la hausse s'explique par un renchérissement des manteaux, des vestes, des complets et des chemises habillées.

The 1.4% increase in the Recreation, Reading and Education index was due principally to a rise of the same magnitude in the Recreation index. Higher prices for cinema shows, cablevision services and travel tour packages were the main contributors to the latest increase in recreational charges. The Reading index rose by 1.9%, as higher newspaper subscription rates were noted.

The Food index advanced by 0.6%, as the index for Food Purchased from Stores rose by 0.4%, while that for Food Purchased from Restaurants advanced by 1.3%. Significant upward pressure on the index for Food Purchased from Stores resulted from higher prices for poultry, dairy products, fresh fruit, concentrated fruit juices and soft drinks. Moderate pressures also came from higher prices for beef, fish and selected bakery products. A considerable proportion of the total upward impact was offset by a decline of 15.5% in the Fresh Vegetables index.

An increase of 3.6% in the prices of medicinal and pharmaceutical products was largely responsible for forcing up the Health and Personal Care index by 1.1%. Some moderate upward pressure on this index also originated from higher prices for selected personal care supplies.

The Transportation index fell by a slight 0.1%, resulting from noticeable offsetting price movements. Most of the negative effects resulted from lower gasoline prices (continuing impact of "price wars") and air fares. Most of the upward thrust came from a rise of 7.4% in the Automobile Insurance Premium index, supplemented by higher prices for new cars and increased local passenger fares.

L'accroissement de 1.4% de l'indice des loisirs, de la lecture et de la formation a été principalement occasionné par une majoration d'une importance similaire de l'indice des loisirs, laquelle s'explique par une hausse des prix des places de cinéma, des services de télédistribution et des voyages organisés. L'indice de la lecture a crû de 1.9%, un renchérissement des abonnements aux journaux ayant été observé.

L'indice des aliments a progressé de 0.6% : l'indice des aliments achetés au magasin s'est élevé de 0.4% tandis que celui des aliments achetés au restaurant s'est accru de 1.3%. La hausse de l'indice des aliments achetés au magasin s'explique principalement par un accroissement des prix de la volaille, des produits laitiers, des fruits frais, des jus de fruit concentrés et des boissons gazeuses. Le renchérissement du boeuf, du poisson et de certains produits de boulangerie a aussi exercé, dans une moindre mesure toutefois, une influence à la hausse. Ces hausses ont été neutralisées en grande partie par un recul de 15.5% de l'indice des légumes frais.

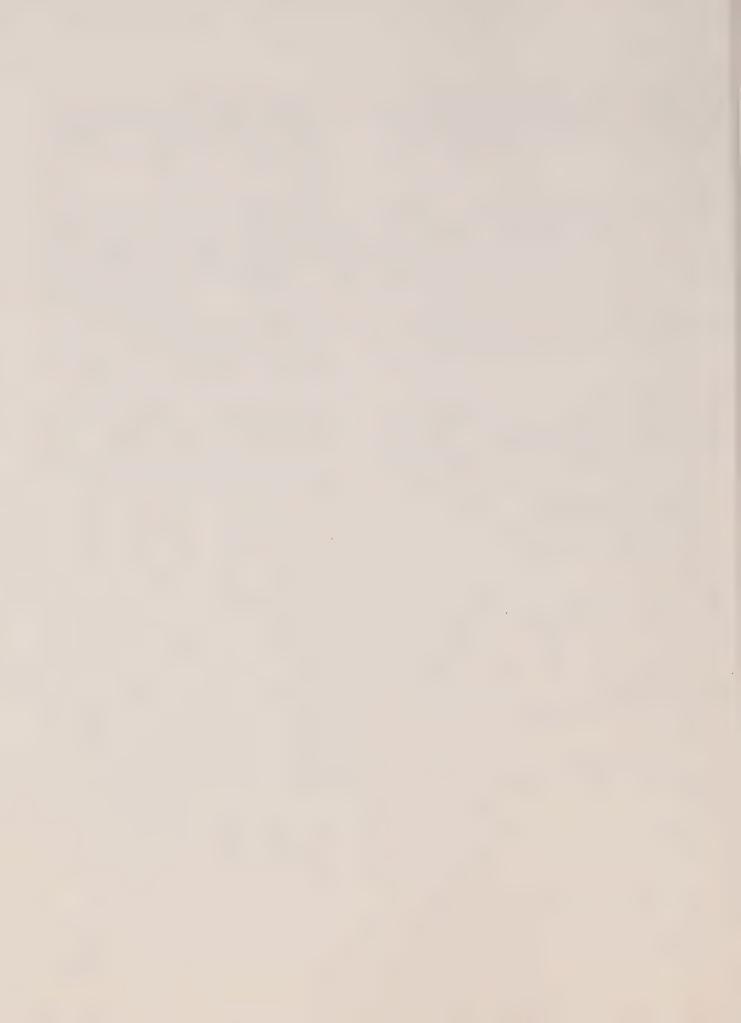

La majoration de 1.1% de l'indice de la santé et des soins personnels est principalement attribuable à un accroissement de 3.6% des prix des médicaments et des produits pharmaceutiques. La montée des prix de certains produits de soins personnels a aussi exercé une influence à la hausse.

L'indice des transports a accusé une baisse de 0.1% en raison d'importants mouvements de prix en sens opposé. La baisse s'explique surtout par une chute des prix de l'essence (découlant toujours des "querres des prix") et des tarifs aériens. Une influence à la hausse a été exercée par une augmentation de l'indice des primes d'assurance-automobile, mais aussi par un renchérissement des voitures neuves et des tarifs exigés des passagers par les services de transport local.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part V.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 to 6 present background information relating to place-to-place retail price comparisons.

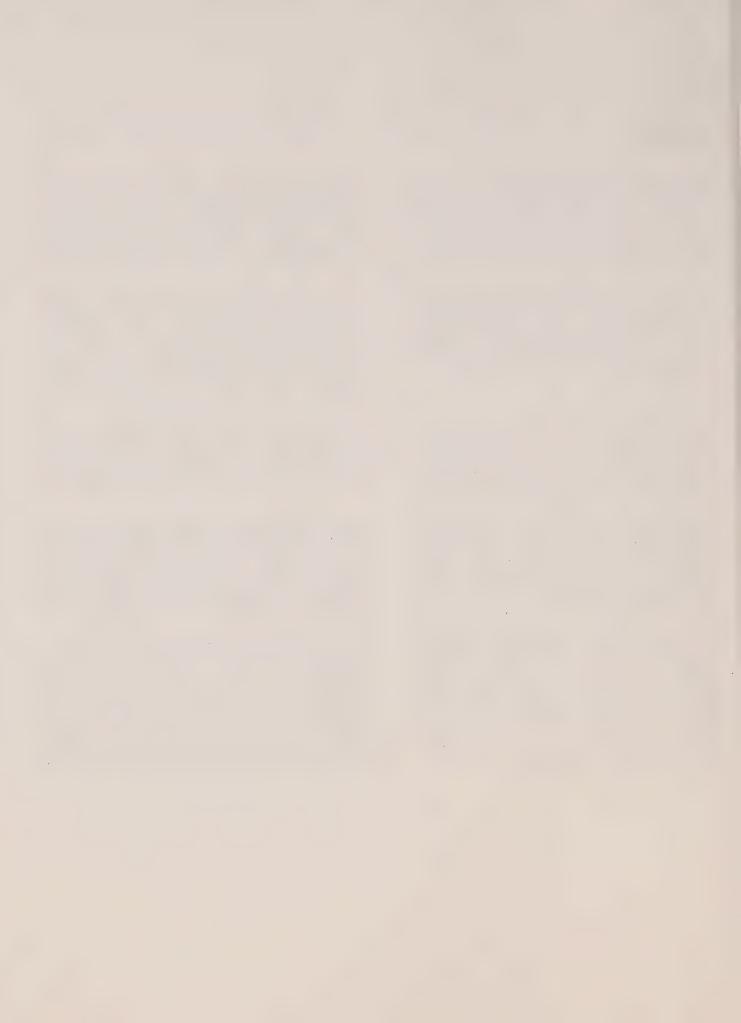

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n^0 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les £.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie V.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 à 6 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

⁽¹⁾ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principale de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiés sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

Analytical Consumer Price Index Series for Owned Accommodation

Introduction

This note describes the second updating of analytical indexes of consumer prices based on different treatments of owned accommodation. The analytical series, which have previously been published for the period from January 1982 to September 1986, are here updated to December 1987. All subsequent publications of these series will, like this one, update the analytical series to the end of the last calendar year completed.

Altogether there are seven different analytical indexes for owned accommodation, based on variants of four different concepts, including one series based on the concept used in the official Consumer Price Index (CPI). Indexes are also calculated for higher level aggregates, including the All-items CPI. All analytical series are Laspeyres indexes with a 1982 base period, including the official concept series. The analytical series based on the official concept therefore match the monthly movement of the corresponding official CPI series only from January 1985 forward, the first month for which the movement of the official CPI is based on a 1982 basket.

The next section provides brief definitions of the concepts on which the analytical series are based. For more detailed descriptions of these concepts, and a discussion of the weighting and estimation of the analytical indexes themselves, the reader should consult the original publication of these series. 1

Definition of Concepts

The official concept, upon which the owned accommodation component of the official CPI is based, is one variant of the user cost approach. An index based on the official concept measures the changes in the cost of using a fixed stock of owned dwellings. It incorporates five main components: replacement cost of that part of the dwelling that is assumed to be used up in the year in question, mortgage interest costs, property taxes, homeowner's insurance premiums and homeowner's repairs. Other homeownership costs include transaction charges (real estate commissions, legal fees, etc.), condominium charges and mortgage insurance.

An index based on the rental equivalence concept measures changes in the cost of consuming the dwelling services of a fixed stock of owner-occupied homes by imputing the change in market rents on tenant-occupied dwellings. The landlord directly pays most of the expenses of a tenant-occupied dwelling, including property taxes, dwelling insurance, mortgage interest, transaction costs and most repairs. Therefore the owned accommodation series based o a rental equivalence concept contains only an equivalent rent series and series representing tenants' repairs and tenants' insurance on personal property.

Séries analytiques d'indices de prix à la consommation pour le logement en propriété

Introduction

Dans les lignes qui suivent, le lecteur trouvera la seconde mise à jour des indices analytiques de prix à la consommation fondés sur différentes méthodes de traitement du logement en propriété. Les séries analytiques publiées ici vont jusqu'en décembre 1987, alors que les séries initiales allaient de janvier 1982 à septembre 1986. Les prochaines séries qui seront publiées constitueront, comme cela est le cas en l'occurrence, des mises à jour des séries analytiques allant jusqu'à la fin de la dernière année civile complète.

Il y a en tout sept indices analytiques distincts pour le loqement en propriété fondés sur des variantes de quatre concepts distincts, dont une série fondée sur le concept utilisé dans l'indice des prix à la consommation (IPC) officiel. Des indices sont également calculés pour des agrégats de niveau supérieur, y compris des indices au niveau de l'Ensemble. Toutes les séries analytiques, y compris celles reposant sur le concept officiel, sont des indices de Laspeyres dont la période de base est 1982. Par conséquent, les séries analytiques fondées sur le concept officiel n'affichent le même mouvement mensuel que les séries correspondantes de l'IPC officiel qu'à partir de janvier 1985, premier mois pour lequel le mouvement de l'IPC officiel a été fondé sur un panier de 1982.

La prochaine section définit brièvement les concepts ayant servi à établir les séries analytiques. Pour une description plus détaillée de ces concepts et un exposé de la pondération et de l'estimation des indices analytiques eux-mêmes, se reporter à la publication où ces séries ont paru pour la première fois. 1

Définition des concepts

Le concept officiel, sur lequel repose la composante du logement en propriété de l'IPC officiel, est une variante de la méthode du coût pour l'utilisateur. Un indice fondé sur le concept officiel mesure les changements dans le coût d'utilisation d'un stock fixe de logements en propriété. Ce concept comprend cinq composantes principales: le coût de remplacement de la partie du logement qui est censée avoir été "usée" durant l'année en question, les coûts d'intérêt hypothécaire, les impôts fonciers ainsi que les primes d'assurance et les réparations à la charge du propriétaire. Les autres coûts du logement en propriété comprennent les frais de transaction (frais de courtage, honoraires d'avocat et de notaire, etc.), les charges de copropriété et l'assurance-hypothèque.

Un indice fondé sur le concept de l'équivalence en valeur locative permet de mesurer les variations dans le coût d'utilisation des services d'un stock fixe de logements occupés par leur propriétaire, en imputant la variation des loyers économiques de logements occupés par des locataires. Le proriétaire d'un logement locatif paie directement la plupart des dépenses, y compris les impôts fonciers, l'assurance du logement, l'intérêt hypothécaire, les frais de transaction et la plupart des réparations. Par conséquent, les seules composantes de la série du logement en propriété fondée sur le concept de l'équivalence en valeur locative sont le loyer équivalent, les réparations à la charge du locataire et l'assurance du locataire sur ses effets personnels.

See the supplement in the October-December issue of Consumer Prices and Price Indexes (Catalogue 62-010)) for 1985. That supplement and this note were written by Andrew Baldwin of Central Research Section, Prices Division. Enquiries concerning these series should be addressed to him at the 13th Floor, Section D-2, Jean Talon Building, Ottawa K1A 016.

Ce supplément et la présente annexe ont été rédigés par Andrew Baldwin de la Section centrale de recherche de la Division des prix. Les demandes relatives à ces séries doivent lui être adressées au 13ième étage, section D-2 de l'Immeuble Jean-Talon, Ottawa K1A 016.

An index based on the money outlays concept measures the price-induced changes in the consumption-related cash outlays on owner-occupied homes. Imputed costs are excluded by definition, as are investment-related cash outlays. Most of the components of owned accommodation using the official concept represent cash disbursements, and are in scope under a money outlays concept, including such items as repairs, property taxes, insurance premiums and mortgage interest. The important omission from the preceding list is the replacement cost of depreciation, which is excluded as an imputed item.

In this publication, two variants of the money outlays concept are shown, one including and one excluding net equity payments. Net equity payments consist of downpayments on owner-occupied homes plus the principal portion of loan repayments when those homes are purchased on credit less sales of owned-occupied homes.

A series based on the net purchase concept measures changes in the current transaction prices for owned accommodation. Net purchases of owner-occupied dwellings consist of all purchases of new and existing owner-occupied dwellings by the target population less sales of such dwellings, that is, purchases of new dwellings by the target population from the non-target population.

Indexes based on three variants of the net purchase concept are shown here. The simplest variant excludes mortgage interest. The second variant assigns a weight to mortgage interest based on the value of negotiated interest payments on net purchases of owner-occupied homes in the basket reference period. The price index for mortgage interest, unlike the corresponding series in the official concept and money outlays aggregates, is the product of indexes for current house and land prices and current interest rates. The second variant of the net purchase concept is consistent with the approach adopted until 1985 in the U.S. CPI. The third variant includes credit payments in a different fashion from the second variant; the single home purchase component is replaced by components for downpayments and discounted mortgage payments.

Update on the Movement of the Analytical Indexes

Since the last published analytical series stopped at September 1986, this section will deal with index movements for 1986 and 1987, concentrating on the more recent year.

There are substantial differences in the movements of the owned accommodation series in these years. In both of them, the money outlays and rental equivalence series registered lower rates of price change than the series based on the official concept (hereafter "official series"). All of the net purchase indexes, by contrast, showed greater rates of increase than the official index.

This was due mainly to a jump in new house prices, which rose by double-digit figures in both 1986 and 1987. These increases have a greater impact on the net purchase series than on the official series and a greater impact on the latter, because of its replacement cost component, than on the money outlays series. Of course, they do not impact at all on the rental equivalence estimates, and in 1987, the owned accommodation index based on rental equivalence showed much the lowest increase of any analytical series. Although that index also contains components for tenant repairs and tenant insurance, it is dominated

Un indice fondé sur le concept des débours permet de mesurer les variations causées par les prix dans les débuts qu'occasionne l'utilisation de logements occupés par leur propriétaire. Les coûts imputés sont exclus par définition, de même que les débours liés à des placements. La plupart des composantes du logement en propriété reposant sur le concept officiel, notamment les réparations, les impôts fonciers, les primes d'd'assurance et l'intéret hypothécaire, représentent des débours et sont donc dans le champ du concept des débours. Le grand absent de la liste est le coût de remplacement de la fraction dépréciée, qui est exclu puisqu'il s'agit d'un élément imputé.

Dans la présente publication, deux variantes du concept des débours sont présentées, la première incluant les remboursements nets sur le capital et la seconde excluant ces remboursements. Les remboursements nets sur le capital comprennent les paiements initiaux sur les logements occupés par leur propriétaire, plus la fraction des versements consacrée au remboursement du capital lorsque les logements sont achetés à crédit, moins les ventes de logements occupés par leur propriétaire.

Un indice fondé sur le concept des achats nets permet de mesurer les variations des prix de transaction courants pour le logement en propriété. Les achats nets de logements occupés par leur propriétaire englobent tous les achats, par la population-cible, de logements neufs et existants occupés par leur propriétaire, moins les ventes de tels logements, c'esta-dire les achats de logements neufs par la population-cible plus les achats nets de logements existants par la population-cible auprès de la population hors cible.

Des indices fondés sur trois variantes du concept des achats nets sont présentés ici. La plus simple de ces variantes exclut l'intérêt hypothécaire. La deuxième attribue un coefficient de pondération à l'intérêt hypothécaire d'après la valeur des paiements d'intérêt négociés sur les achats nets de logements occupés par leur propriétaire dans la période de référence du panier. L'indice de prix pour l'intérêt hypothécaire, contrairement aux séries correspondantes des agrégats fondés sur le concept officiel et sure celui des débours, est le produit des indices pour les prix courants des maisons et des terrains et pour les taux d'intérêt courants. La deuxième variante du concept des achats nets est conforme à la méthode utilisée jusqu'en 1985 pour l'IPC américain. La troisième variante tient compte des paiements d'intérêt tout comme la deuxième variante, mais d'une manière différente. En effet, dans la troisième variante, la composante unique de l'achat de maisons est rempacée par deux composantes, la première représentant les paiements initiaux et la seconde, les versements hypothécaires actualisés.

Mise à jour des indices analytiques

Étant donné que les dernières séries analytiques publiées allaient jusqu'en septembre 1986, cette partie traitera des mouvements des indices pendant les années 1986 et 1987 et portera surtout sur l'année la plus récente.

Au cours de ces années, on relève d'importants écarts dans les mouvements des séries d'indices pour le logement en propriété. Au cours de ces deux années, les séries des débours et de l'équivalence en valeur locative ont affiché des taux de variation des prix inférieurs aux séries reposant sur le concept officiel (ci-après appelées "séries officielles"). À l'opposé, on a enregistré des taux d'augmentation supérieurs à l'indice officiel pour tous les indices des achats nets.

Cela est surtout attribuable à la montée en flèche des prix des nouvelles maisons, la hausse atteignant le niveau de deux chiffres en 1986 et en 1987. Ces augmentations ont une influence plus marquée sur la série des achats nets que sur la série officielle et elles ont également des conséquences plus grandes sur cette dernière, compte tenu de sa composante du coût de remplacement, que sur la série des débours. Évidemment, elle n'influe aucunement sur les estimations de l'équivalence en valeur locative et, en 1987, l'indice du logement en propriété fondé sur l'équivalence en valeur locative est, de tous les indices analytiques, celui dont l'augmentation est la plus modeste. Bien que les composantes

by its equivalent rent component, which largely dictates its movements. Rents went up by less than 4% in both 1986 and 1987, and the equivalent rent series shows lower rates of increase than the rent CPI, rising by about 3% in each year. The lower rates of increase of the equivalent rent series are largely due to that series giving smaller basket shares than the rent CPI to several urban centres where there were large rent increases.

Text Table II shows the analytical series for owned accommodation at the Canada level. Text Tables III, IV and V show analytical series for shelter, housing and All-items respectively. The indexes for the latter aggregates are identical to the official aggregates, except for their owned accommodation components. Figure I provides a graph of the analytical owned accommodation series from 1982 forward.

The quarterly rate of change (measured from September to December) of the official owned accommodation series in the final quarter of 1986 is 2.9%, as opposed to a .6% rate for the corresponding rental equivalence series. Most of the increase in the official series comes from a 5% rise in the replacement cost index and a 6.1% rise in the home insurance index. House prices rose strongly in several urban centres in the fourth quarter of 1986, especially in Toronto and southwestern Ontario. In the same quarter, rents do not show large increases, and the equivalent rent index grows by an even smaller amount than the rent CPI, largely because of house rents having smaller rates of increase than apartment rents.

The money outlays series also shows lower rates of increase than the official series. The first money outlays index is only the official index, less its replacement cost component, which accounts for its 2.4% rate of increase. The money outlays index including equity payments has an even lower growth rate in the fourth quarter, at 1.6%. This is partly due to the relatively low increase in its component for mortgage equity payments (1.3%), partly to the high rate of increase (4.6%) in its sale of home component. Since the latter series has a negative weight in the money outlays index, the higher its rate of increase, the lower is that of the owned accommodation index. net purchase series have rates of price change of 4% or more in the fourth quarter, since they immediately reflect that quarter's increase in house prices, and, in the case of the second and third net purchase series, the increase in mortgage rates.

The annual rate of change (measured from December to December) of the official index in 1986 is 5.3%, which compares with a 3.0% increase in the rental equivalence index. The components contributing most to the increase in the former index are replacement costs (13.6%), property taxes (6.5%) and home insurance (13.1%). Mortgage interest, which has such an important share in the basket of the owned accommodation index, shows virtually no change from December 1985 to December 1986. The equivalent rent CPI has a 3.2% increase in 1986. This is less than the rate of increase in the rent CPI, mainly because Montreal, Quebec City and Halifax, the urban centres with the largest rent increases for 1986, all have low homeownership ratios compared to other Canadian urban centres.

The replacement cost component for Toronto has a 31.8% change in 1986, but there are also large increases for the Ontario southwest large stratum,

des réparations à la charge du locataire et de l'assurance du locataire fassent partie de cet indice, celui-ci est surtout dominé par la composante de l'équivalence en valeur locative qui, dans une large mesure, régit ses mouvements. Les loyers ont augmenté de moins de 4% en 1986 et en 1987, et la série du loyer équivalent a enregistré des taux d'augmentation inférieurs à ceux de l'IPC du loyer, en hausse d'environ 3% pour chacune de ces années. Les taux d'augmentation moins élevés de la série du loyer équivalent s'expliquent en majeure partie par le fait que, pour ce qui est de cette série, on a attribué à plusieurs centres urbains où l'on a relevé d'importantes hausses de loyer des parts du panier inférieures à celles de l'IPC du loyer.

Le tableau explicatif II illustre les séries analytiques pour le logement en propriété au niveau du Canada. Aux tableaux explicatifs III, IV et V, on retrouve respectivement les séries analytiques pour le logement, l'habitation et l'ensemble. Les indices pour ces derniers agrégats sont identiques aux agrégats officiels à l'exception toutefois des composantes du logement en propriété. Le diagramme présente un graphique des séries analytiques pour le logement en propriété pour 1982 et les années suivantes.

Le taux de variation trimestriel (mesuré de septembre à décembre) de la série officielle du logement en propriété du dernier trimestre de 1986 s'établit à 2.9%, par opposition au taux de 0.6% de la série correspondante pour l'équivalence en valeur locative. L'augmentation de la série officielle découle, en majeure partie, des hausses de 5% de l'indice du coût de remplacement et de 6.1% de l'indice des primes d'assurance. Au quatrième trimestre de 1986, les prix des maisons ont fortement augmenté dans plusieurs centres urbains, surtout à Toronto et dans le sud-ouest de l'Ontario. Pendant le même trimestre, on ne relève aucune augmentation importante au titre des loyers et la hausse de l'indice du loyer équivalent est même inférieure à celle de l'IPC du loyer surtout parce que les loyers des maisons ont moins augmenté que les loyers des appartements.

La série des débours augmente également moins rapidement que l'indice officiel. Le premier indice des débours est identique à l'indice fondé sur le concept officiel sauf qu'elle n'a pas de composante pour le coût de remplacement, ce qui explique son taux d'augmentation de 2.4%. Le taux de croissance de l'indice des débours comprenant des remboursements sur le capital se situe à un niveau inférieur de 1.6% pendant le quatrième trimestre. Cela s'explique d'une part par la hausse relativement faible de sa composante des remboursements hypothécaires sur le capital (1.3%), et, d'autre part, par l'importante augmentation (4.6%) de sa composante de la vente de maisons. Puisque cette dernière composante a un coefficient de pondération négatif, plus elle augmente, et plus la composante de l'indice du logement en propriété diminue. Pour ce qui est de la série des achats nets, les taux de variation des prix s'élèvent à 4% ou plus pendant le quatrième trimestre, reflétant ainsi directement l'augmentation trimestrielle des prix des maisons et, dans le cas de la seconde et de la troisième série des achats nets, la hausse des taux hypothécaires.

En 1986, le taux annuel de variation (mesuré de décembre à décembre) de l'indice officiel s'établit à 5.3%, comparativement à la hausse de 3.0% de l'indice de l'équivalence en valeur locative. L'augmentation du premier indice est surtout attribuable aux composantes du coût de remplacement (13.6%), des impôts fonciers (6.5%) et des primes d'assurance (13.1%). L'intérêt hypothécaire, qui est un élément très important du panier de l'indice du logement en propriété, n'a pratiquement pas varié de décembre 1985 à décembre 1986. On a enregistre en 1986 un accroissement de 3.2% de l'IPC du loyer équivalent. Cette hausse inférieure à celle de l'IPC du loyer s'explique surtout par le fait qu'on a enregistré des taux peu élevés de logement en propriété pour les centres urbains où les augmentations de loyer ont été les plus fortes en 1986, c'estatire Montréal, Québec et Halifax, comparativement aux autres centres urbains canadiens.

En 1986, la composante du coût de remplacement pour Toronto a varié de 31.8%, mais on a également relevé d'importantes augmentations dans la strate des grandes villes du sud-ouest Montreal, Quebec City and Edmonton. If the replacement cost component increases substantially for an urban centre, the official owned accommodation index will also likely do so, especially since the same index is used as a proxy for real estate commissions and in calculating the home insurance component.

The net purchase series increased by 7.5% or more in 1986. They are more sensitive to changes in house prices than the other analytical series and will generally show greater rates of increase than the other indexes when there are large positive changes in house prices. The typical chartered bank mortgage rate for a five-year term fell from 11.75% in November 1985 to 11.25% in November 1986, which explains why the first net purchase series, which excludes mortgage interest, shows a higher rate of increase than the other two, both of which take account of mortgage payments. (Interest rates and new housing prices enter the CPI with a one-month lag, so it is their November-to-November movements that are relevant to annual CPI movements.)

The money outlays series excluding equity payments shows a lower rate of increase, at 3.4%, than the official series, as one would expect, given the large 1986 increase in the replacement cost component. The money outlays series including equity payments shows an even lower rate of increase, at 2.7%, due to the substantial increases in the downpayments and equity payments series being more than offset by the 12.5% increase in the sale of home component. Since the latter component enters the index with a negative weight, the higher its rate of increase, the lower is that of the money outlays index.

The annual rate of change for the official index in 1987 is 6.0%, which compares with a 2.9% rate of change for the rental equivalence index. Contributing to the increase in the former index are replacement cost, with an 11.6% increase, property taxes (6.7%), mortgage interest (2.4%) and home insurance (11.3%). The equivalent rent index rose 3.2% in 1987, less than the 3.6% increase in the rent CPI. As in 1986, most of this difference is due to differences in the weighting of urban centres in the two indexes; the large rent increase in Montreal has less influence on the equivalent rent series than on the rent series, while the reverse is true for the low rent increases in several other urban centres, including Calgary, Regina and Saskatoon. Note that there is a seasonal rise in the rental equivalence series in the third quarter, just as there is in the rent CPI. This is due to the large number of leases that are initiated in July in Quebec urban centres; the rent increases on these leases are reflected, due to a one-month production lag, in the August CPI.

All of the net purchase series grew by more than 8% in 1987, with the second net purchase series showing the highest rate of increase of all of the analytical series, at 9.4%. Changes in house prices (house including land) are the most important factor in these large increases, but interest rates also play a role. The typical chartered bank mortgage rate for a one-year term was 9.75% in November 1986, fell to 9.0% in March 1987, and was back at 9.75% in May. In September, the rate peaked at 10.5%, but in November it was still 0.5% above its level of 12 months ago. This explains why the first net purchase series, which takes no account of credit transactions, shows a higher rate of increase in the first quarter of 1987 and a lower rate of increase in the second quarter, and has the lowest rate of increase of the three series for the year. The second net purchase series is the most sensitive to interest rates, which accounts for its high annual rate of increase.

de l'Ontario, à Montréal, à Québec et à Edmonton. Si la composante du coût de remplacement d'un centre urbain augmente de façon marquée, il est vraisemblable que l'indice officiel pour le loqement en propriété suivra la même tendance, car le même indice sert à fixer les frais de courtage et à calculer la composante des primes d'assurance.

En 1986, l'augmentation des séries des achats nets s'établit à 7.5% ou plus. Ces séries sont plus sensibles aux variations des prix des maisons que les autres séries analytiques et, généralement, elles augmentent plus rapidement que les autres indices lorsque l'on relève d'importantes variations d'une valeur positive des prix des maisons. Le taux hypothécaire moyen d'une banque à charte pour une période de 5 ans est passé de 11.75% en novembre 1985 à 11.25% en novembre 1986, ce qui explique que le taux d'augmentation de la première série des achats nets, qui ne comprend pas l'intérêt hypothécaire, soit plus élevé que les deux autres, qui tiennent compte des paiements hypothécaires. (Les taux d'intérêt et les prix des logements neufs sont intégrés à l'IPC avec un mois de retard, ce qui signifie qu'il faut tenir compte de leurs mouvements de novembre à novembre en ce qui a trait aux mouvements de l'IPC annuel.)

L'augmentation de 3.4% de la série des débours excluant les remboursements sur le capital est inférieure à celle de la série officielle, comme on peut s'y attendre compte tenu de la hausse importante de 1986 de la composante du coût de remplacement. La hausse de 2.7% de la série des débours incluant les remboursements sur le capital est encore moins élevée en raison du fait que les augmentations appréciables des séries des paiements initiaux et des paiements sur le capital sont plus que compensées par l'accroissement de 12.5% de la composante de la vente de maisons. Puisque cette dernière a un coefficient de pondération négatif, plus son taux d'augmentation sera élevé et moins élevé sera celui de l'indice des débours.

En 1987, le taux annuel de variation de l'indice officiel s'établit à 6.0%, comparativement à 2.9% pour l'indice de l'équivalence en valeur locative. L'augmentation du premier indice est attribuable aux hausses du coût de remplacement (1-1.6%), des impôts fonciers (6.7%), de l'intérêt hypothécaire (2.4%) et des primes d'assurance (11.3%). L'indice du loyer équivalent est en hausse de 3.2% en 1987, ce taux étant inférieur à l'augmentation de 3.6% de l'IPC du loyer. Comme en 1986, cet écart est attribuable en majeure partie aux divergences des coefficients de pondération des centres urbains des deux indices; la forte hausse des loyers enregistrée à Montréal influe beaucoup moins sur la série du loyer équivalent que sur celle des loyers, et le principe inverse est valable dans le cas des faibles augmentations de loyer dans d'autres centres urbains, notamment Calgary, Regina et Saskatoon. Il est à noter que la série de l'équivalence en valeur locative augmente au troisième trimestre, tout comme l'IPC du loyer. Cela s'explique par le grand nombre de baux conclus en juillet dans les centres urbains du Québec; compte tenu du retard d'un mois attribuable aux exigences de la production, les augmentations de loyer se rapportant à ces baux sont enregistrées dans l'IPC du mois d'août.

En 1987, toutes les séries des achats nets augmentent de plus de 8%, la seconde série enregistrant la hausse la plus élevée de toutes les séries analytiques (9.4%). La variation des prix des maisons (y compris le terrain) est le facteur qui joue le rôle le plus important à ce chapitre, mais les taux d'intérêt y jouent également un role. Le taux hypothécaire moyen accordé par une banque à charte pour une période d'un an s'établissant à 9.75% en novembre 1986, est tombé à 9.0% en mars 1987 et est remonté à 9.75% en mai de la même année. En septembre, le taux a atteint un sommet de 10.5% mais, novembre, il était encore supérieur de 0.5% au niveau atteint 12 mois auparavant. C'est pourquoi le taux de progession de la première série des achats nets, qui ne tient pas compte des paiements d'intérêt, est plus rapide pendant le premier trimestre de 1987, moins élevé pendant le second trimestre et il est inférieur à celui des deux autres séries pour l'année. La deuxième série des achats nets est celle qui est la plus sensible aux variations des taux d'intérêt, ce qui explique son taux de progression annuel élevé.

The money outlays series grew by more than 4% in 1987, roughly halfway between the growth rates of the official and rental equivalence series. Both money outlays series show lower or equal rates of growth by comparison with the rental equivalence series in the first three quarters of 1987. It is only in the fourth quarter that they show a higher rate of growth, largely due to the 6.7% increase in the property tax component in October, which causes a fourth quarter increase in the rate of price change for all of the analytical series, except for the one based on rental equivalence. The fourth quarter movement of the official and money outlays series, and of the second net purchase series, was also influenced by the strong 1.2% increase in the mortgage interest index, the largest quarterly increase in that series since 1984.

The rate of growth of house prices in most urban centres where those rates were high peaked in the second quarter of 1987. This is particularly evident for Toronto, whose replacement cost component grew by 10% in the second quarter of 1987, but by less than 1% in the next quarter, and remained flat in the final quarter of the year. This is why there is a substantial drop in the official and net purchase series in the third quarter of 1987. The same phenomenon has the opposite effect on the money outlays series including equity payments because of the negative weight of its sale of home component, and its rate of increase went up to 1.0% in the third quarter from 0.3% in the second quarter. The mortgage equity payments component of the same index, representing a 25-year moving average of house prices, is not very sensitive to current changes in house prices. Nevertheless, it continued to grow at an increasing rate in 1987, achieving a 6.5% rate of increase over the year as a whole, much less than the 12.0% increase of the sale of home component, but greater than the increase in the official or money outlays series for owned accommodation.

If one examines the tables for higher level aggregates, it can be seen that the differences between the different series diminish greatly as one goes to higher and higher levels of aggregation. The analytical indexes for shelter still show quite different patterns, muted variations for the most part of those found in the indexes for owned accomodation. In 1986, the official index increases by 3.3%, the rental equivalence and money outlays series by about 2%, and the net purchase series in a range from 3.7% to 4.4%. In 1987, the official series increases by 5.0%, the rental equivalence series by 3.4%, and the money outlays series by about 4%. The first and third net purchase series increases by almost 6%, while the second net purchase series increases by 6.5%.

Note that the seasonal third quarter rise in rents is seen quite clearly in the rental equivalence series for shelter, although not in the other series. Note also, that at this level and at higher levels of aggregation, the net purchase series including interest is typically the "cuckoo in the nest", showing a greater discrepancy in its movement from the official index than any of the other series. This is because its owned accommodation series at the same time is the most volatile of any of the analytical series and has the largest value weight of any of the net purchase series.

It is interesting to compare the movements of the analytical All-items series with those of selected industrial countries, as shown in Table 6 of this publication. The United States currently employs a rental equivalence approach to owned accommodation. The 12-month rates of change of its All-items CPI are less than those of the Canadian CPI for January to September and greater thereafter. If the comparison

En 1987, la série des débours s'accroît de plus de 4%, ce taux se situant à mi-chemin entre les taux de progression des séries officielle et de l'équivalence en valeur locative. Les taux de progression des deux séries de débours sont inférieurs ou équivalents à ceux de la série de l'équivalence en valeur locative des trois premiers trimestres de 1987. Ce n'est qu'au quatrième trimestre qu'on enregistre un taux de progression supérieur, attibuable en majeure partie à la hausse de 6.7% de la composante des impôts fonciers en octobre, qui entraîne, au quatrième trimestre, une augmentation du taux de la variation des prix de toutes les séries analytiques à l'exception de celle fondée sur l'équivalence en valeur locative. Au quatrième trimestre, la hausse importante de 1.2% de l'indice de l'intérêt hypothécaire, qui constitue la hausse trimestrielle la plus élevée de cette série depuis 1984, a influé sur les mouvements des séries officielles et des débours et de la deuxième série des achats nets.

Le taux de progression des prix des maisons dans la plupart des centres urbains a atteint un sommet pendant le deuxième trimestre de 1987. Ceci est particulièrement le cas de Toronto, où la composante du coût de remplacement a augmenté de 10% pendant le deuxième trimestre de 1987 et de moins de 1% au cours du trimestre suivant, pour rester stable au dernier trimestre de l'année. Voilà la raison pour laquelle on a enregistré une importante diminution des séries officielle et des achats nets au cours du troisième trimestre de 1987. Le même phénomène produit un effet inverse sur la série des débours incluant les remboursements sur le capital, dont le taux de progression a atteint 1.0% au troisième trimestre comparativement à 0.3% le trimestre précédent, en raison du coefficient de pondération négatif de sa composante de la vente de La composante des remboursements hypothécaires sur le capital de ce même indice, qui représente en fait une moyenne des prix des maisons variant pendant une période de 25 ans, n'est pas vraiment sensible aux variations actuelles des prix des maisons. Néanmoins, elle continue à croître de plus en plus rapidement en 1987 (6.5% pour l'ensemble de l'année), le taux étant très inférieur à la hausse de 12% de la composante de la vente de maisons mais supérieur à l'augmentation des séries officielle et des débours pour le logement en pro-

L'étude des totalisations des agrégats de haut niveau révèle que l'écart entre les diverses séries diminue rapidement au fur et à mesure qu'augmente le niveau d'agrégation des données. Les indices analytiques du logement suivent encore des tendances différentes, leurs variations étant, en majeure partie, le reflet atténué de celles des indices pour le logement en propriété. En 1986, l'indice officiel augmente de 3.3%, les indices de l'équivalence en valeur locative et des débours d'environ 2%, et la série des achats nets, de 3.7% à 4.4%. En 1987, la série officielle est en hausse de 5.0%, l'indice de l'équivalence en valeur locative, de 3.4%, et la série des débours d'environ 4%. La première et la troisième série des achats nets augmentent de presque 6% et la deuxième, de 6.5%.

Il est à noter que la hausse saisonnière des loyers du troisième trimestre influe manifestement sur la série de l'équivalence en valeur locative mais non sur l'autre indice. Il est à noter également qu'à ce niveau et à des niveaux d'aqrégation plus élevés, la série des achats nets comprenant l'intérêt est habituellement divergente, en ce sens qu'elle s'écarte plus de l'indice officiel que n'importe quelle autre série. Cela s'explique par le fait que sa composante pour le logement en propriété est la plus instable de n'importe quel des indices analytiques et possède le coefficient de pondération le plus important de n'importe quelle série des achats nets.

Il est intéressant de comparer les mouvements de la série analytique d'ensemble à ceux des séries de certains pays industrialisés, illustrés au tableau 6 de la présente publication. À l'heure actuelle, les États-Unis adoptent l'approche de l'équivalence en valeur locative pour le logement en propriété. Les taux de variation pour douze mois de son IPC d'ensemble sont inférieurs à ceux de l'IPC canadien pour les mois de janvier à septembre et, par la suite, ils

with the American CPI is based on the analytical rental equivalence series for All-items, the American series starts registering higher rates of price change as of August. The annual change of the American CPI for 1987 (4.4%) is also appreciably higher than that of the Canadian rental equivalence series (3.7%), but is almost the same as that of the official Canadian series (4.2%).

To take another example, from January to December, the 12-month rates of change of the Canadian official series are always greater than, or equal to those of the United Kingdom series. If instead, one compares the British series to the first money outlays series for All-items, a more appropriate index of comparison since the British Retail Prices Index excludes depreciation, the British rate of price change exceeds that of Canada for some months of the year. It is also only 0.2% lower than its Canadian counterpart for 1987 (i.e. for December), as opposed to a difference of 0.5%, if the comparison is based on the official index.

atteignent des niveaux supérieurs. Si l'on établit des comparaisons avec l'IPC américain en se fondant sur les séries analytiques de l'équivalence en valeur locative d'ensemble, on enregistre des taux de variation des prix plus élevés pour la série américaine à compter du mois d'août. En outre, le taux de variation annuel de l'IPC américain pour 1987 (4.4%) est considérablement plus élevé que celui de la série canadienne de l'équivalence en valeur locative (3.7%) mais s'établit sensiblement au même niveau que celui de la série canadienne (4.2%).

A titre d'autre exemple, prenons le cas des séries officielles canadiennes dont les taux de variation pour 12 mois, de janvier à décembre, sont toujours supérieurs ou égaux à ceux des séries du Royaume-Uni. Si l'on compare plutôt les séries britanniques à la première série des débours d'ensemble, qui constitue un indice de comparaison plus appropriée étant donné que le Retail Prices Index du Royaume-Uni ne tient pas compte de l'amortissement, on constate que le taux de variation des prix du Royaume-Uni est supérieur à celui du Canada pendant certains mois de l'année. En outre, il n'est inférieur que de 0.2% au taux canadien pour 1987 (c'est-à-dire pour décembre), par opposition à l'écart de 0.5% découlant d'une comparaison fondée sur l'indice officiel.

MONITORING OF CPIs FOR SPECIAL GROUPS 1987 DATA

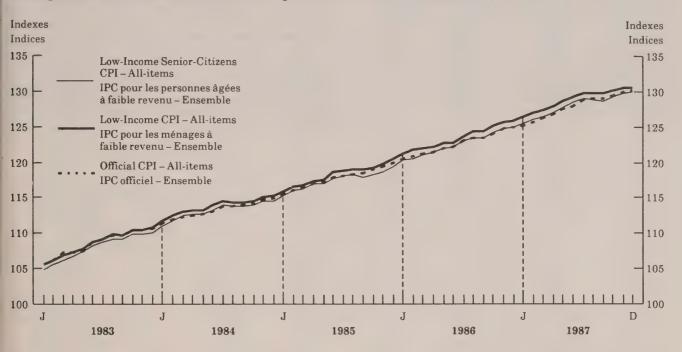

This article provides a brief update for the two special-group indexes that Statistics Canada have published for several years. Only a brief update is provided, because Statistics Canada has shown, on many occasions, that, both theoretically and empirically, sub-group indexes do not differ substantially from the Official CPI for All-items, although there can be important differences at lower levels of aggregation. This article shows empirically that those conclusions continue to be valid.

SUIVI DES IPC POUR LES GROUPES PARTICULIERS DONNÉES DE 1987

Le présent supplément contient une brève mise à jour des deux indices pour des groupes particuliers que Statistique Canada publie depuis plusieurs années. La raison pour laquelle la mise à jour est brève est que Statistique Canada a maintes fois démontré théoriquement et empiriquement que les indices pour des sous-ensembles ne diffèrent pas notablement de l'IPC officiel d'ensemble, bien qu'il existe des différences importantes aux niveaux d'agrégation inférieurs. En conséquence, le présent article démontre empiriquement que ces conclusions continuent d'être valides.

Comparison of the Low-Income Senior-Citizens CPI, Low Income CPI, and the Official CPI, for Canada (March 1982 = 100)

Comparaison de l'IPC, pour les personnes âgées à faible revenu, l'IPC pour les ménages à faible revenu, et l'IPC officiel, pour le Canada (mars 1982 = 100)

As expected, the 1987 data (contained in Text Table VI) for both the Low-Income Senior-Citizens CPI and the Low-Income CPI, showed only minor differences compared to the Official CPI and all exhibited a similar trend. This is consistent with the findings of previous analyses of sub-group indexes.

From March 1982 (the base period of the Low-Income Senior-Citizens CPI) to December 1987, the Official CPI increased by 30.1%, compared to 30.0% for the Low-Income Senior-Citizen CPI, and 30.6% for the Low-Income CPI. For each of the months of 1987, the Allitems indexes for the Low-Income CPI were higher than the Official CPI, whereas the Low-Income Senior-Citizens indexes were only higher up to July, but slightly lower, from August onwards.

In comparing the December 1987 special group-indexes to the Official CPI for the seven major components, one of the components was lower than the Official CPI, four were higher, and two showed mixed results. Food, as in 1986, was lower than the Official CPI, for both the Low-Income Senior-Citizens CPI (-1.3%) and the Low-Income CPI (-0.7%).

Comme on s'y attendait, les données de 1987 (présentées dans le tableau explicatif VI) ne font apparaître que des différences mineures par rapport à l'IPC officiel, qu'il s'agisse de l'IPC pour les personnes âgées à faible revenu ou de l'IPC pour les ménages à faible revenu. Ils ont tous affiché une tendance semblable, ce qui concorde avec les conclusions des analyses précédentes sur les indices des sous-groupes.

De mars 1982 (période de base de l'IPC pour les personnes âgées à faible revenu) à décembre 1987, l'IPC officiel a auqmenté de 30.1%, alors que l'IPC pour les personnes âgées à faible revenu progressait de 30.0% et l'IPC pour les ménages à faible revenu, de 30.6%. Pour chacun des mois de 1987, les indices d'ensemble de l'IPC pour les ménages à faible revenu ont dépassé l'IPC officiel, et les indices d'ensemble de l'IPC pour les personnes âgées à faible revenu se sont maintenus légèrement au-dessus de l'IPC officiel jusqu'en juillet, puis un peu en-dessous à partir d'août.

Si on compare les deux indices des groupes particuliers de décembre 1987 à l'IPC officiel, l'une des sept composantes est inférieure à l'IPC officiel, quatre sont supérieures et les deux indices de deux des composantes ont des résultats opposés. Par rapport à l'IPC officiel, la composante des aliments est - comme en 1986 - moins élevée dans l'IPC pour les personnes âgées à faible revenu (-1.3%) ainsi que dans l'IPC pour les ménages à faible revenu (-0.7%).

For four of the major components - Housing, Transportation, Health and Personal Care, and Tobacco Products and Alcoholic Beverages - the special group-indexes were higher than the Official CPI in December 1987. For Housing, the Low-Income Senior-Citizens CPI was 1.0% higher than the Official CPI, while the Low-Income CPI was 0.6% higher. For Transportion, the Low-Income Senior-Citizens CPI was higher than the Official CPI by 2.2% and the Low-Income CPI by 0.8%. For Health and Personal Care, the Low-Income Senior-Citizens CPI and the Low-Income CPI were higher than the Official CPI, by 1.2% and 0.9% respectively. For Tobacco Products and Alcoholic Beverages, however, as in 1986, the differences were larger, at 3.8% higher for the Low-Income CPI.

Clothing for the Low-Income Senior-Citizens CPI was higher than the Official CPI by 1.1%, but for the Low-Income CPI was lower by 0.1%. For Recreation, Reading and Education, the Low-Income Senior-Citizens CPI was lower by 1.5%, compared to the Official CPI, but the Low-Income CPI was higher by 1.7%.

Further information about methodological considerations, as well as analyses and weights, can be obtained from the supplement to the 1986 January-March issue of Consumer Prices and Prices Indexes, or by contacting the Development and Analysis Unit of Prices Division, at (613)-951-4777.

En décembre 1987, les indices des groupes particuliers surpassaient l'IPC officiel pour quatre composantes sur sept (habitation, transports, santé et soins personnels, et produits du tabac et boissons alcoolisées). Dans le cas de l'habitation, l'IPC pour les personnes âgées à faible revenu et l'IPC pour les ménages à faible revenu dépassaient l'IPC officiel de 1.0% et 0.6% respectivement. Quant aux transports, l'IPC pour les personnes âgées à faible revenu dépassait de 2.2% l'IPC officiel, et l'IPC pour les ménages à faible revenu excédait de 0.8% l'IPC officiel. En ce qui concerne la santé et les soins personnels, l'écart était de 1.2% en faveur de l'IPC pour les personnes âgées à faible revenu et de 0.9% en faveur de l'IPC pour les ménages à faible revenu. Cependant, comme en 1986, les écarts étaient plus marqués dans le cas des produits du tabac et des boissons alcoolisées, soit 3.8% de plus pour l'IPC pour les personnes âgées à faible revenu, et de 6.4% de plus pour l'IPC des ménages à faible revenu.

Au chapitre de l'habillement, l'IPC pour les personnes âgées à faible revenu était supérieur de 1.1% par rapport à l'IPC officiel, mais l'IPC des ménages à faible revenu était inférieur de 0.1%. Dans le cas des loisirs, la lecture et la formation, l'IPC pour les personnes âgées à faible revenu était de 1.5% inférieur à l'IPC officiel tandis que l'IPC pour les ménages à faible revenu excédait ce même indice de 1.7%.

D'autres renseignements portant sur des considérations d'ordre méthodologique ainsi que des analyses et des coefficients de pondération peuvent être obtenus en consultant le supplément au numéro de janvier-mars 1986 de Prix à la Consommation et indices de prix ou en communiquant avec la Sous-section du développement et de l'analyse de la Division des prix, au numéro (613)-951-4777.

⁽¹⁾ Use of this factor as a multiplier will yield 1981=100 indexes, for those users who require them on this time base.
(1) Les utilisateurs qui ont besoin d'indices sur la base 1981=100 pourront les obtenir en utilisant ce facteur comme multiplicateur.

CPI "REGULATED PRICES"

This article on CPI "Regulated" Prices updates indexes and information for the period July 1986 to December "Regulated" Prices principally include commodities whose prices are reviewed by a government agency and commodities that have a portion of their prices set by legislation. Using this criteria, CPI "Regulated" Price indexes are derived by sorting the different commodity indexes from the CPI into a "regulated" or a "non-regulated" category. Text Table VII of this article contains the resulting indexes for the "Regulated" and "Non-Regulated" groupings, as well as several special aggregates. For the period under review, a moderate deceleration was noted, particularly in 1987, in the movement of the "Regulated" group-This deceleration in the movement of the ing. "Regulated" grouping was mainly caused by a moderation in the price increases for Tobacco Products and Alcoholic Beverages, and Public Transportation (especially air fares). On the other hand, the movement of the "Non-Regulated" grouping accelerated for the period, particularly in late 1987. The result of these shifts was that between 1986 and 1987, the year-to-year movement was slightly lower for the "Regulated" than for the "Non-Regulated" grouping. This period marks the first year since 1979 that the year-to-year movement for "Regulated" has lagged that for "Non-Regulated".

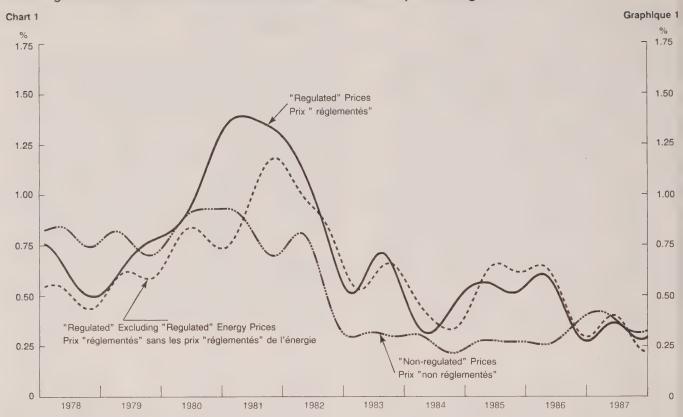

"PRIX RÉGLEMENTÉS" DE L'IPC

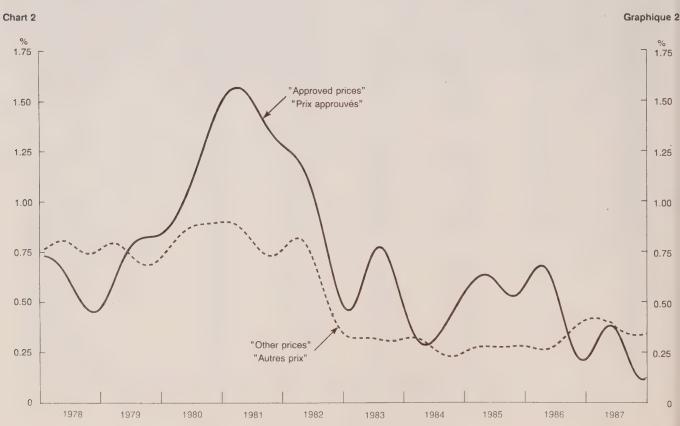

L'objet du présent article est de mettre à jour les indices et les renseignements pour la période allant de juillet 1986 à décembre 1987. La catégorie des prix "réglementés" comprend surtout les produits dont les prix sont révisés par un organisme gouvernemental et les produits dont les prix sont fixées en partie par des textes législatifs. À partir de ces critères, on calcule les indices des prix "réglementés" de l'IPC en sélectionnant les divers indices des produits de l'IPC selon qu'ils appartiennent ou non à la catégorie "réglementée". indices ainsi obtenus, de même que plusieurs agrégats spéciaux figurent au tableau explicatif VII. Pour la période en guestion, on relève une légère diminution, particulièrement en 1987, dans la catégorie des produits "réglementés". Cette diminution est attribuable surtout aux augmentations moins rapides des prix des produits du tabac et des boissons alcoolisées, et des transports publics (en particulier des billets d'avion). D'autre part, on note une hausse des produits de la catégorie "non réglementée" pendant cette période, particulièrement à la fin de l'année 1987. Dans l'ensemble, on peut dire que le mouvement des prix des produits de la catégorie "réglementée" a été légèrement plus stable que celui de la catégorie "non réglementée", entre 1986 et 1987. C'est la première fois depuis 1979, que le mouvement d'une année à l'autre des prix de la catégorie "réqlementée" est inférieur à celui des prix de la catégorie "non réglementée".

Indexes and information on CPI "Regulated" Prices were first issued in a study released as a supplement to the July to September 1986 issue of Consumer Prices and Price Indexes. The original study contained indexes and information relating to CPI "Regulated" prices for the period April 1973 to June 1986. Further information concerning methodology, etc. may be obtained by contacting the Development and Analysis Unit of Prices Division, at (613)-951-4777.

Des indices et des renseignements sur les prix "réqlementés" de l'IPC ont été publiés pour la première fois dans une étude qui complétait le numéro de juillet-septembre 1986 de <u>Prix à la consommation et indices des prix.</u> L'étude en question renfermait des indices et des renseignements ayant trait aux prix "réglementés" de l'IPC pour la période allant d'avril 1973 à juin 1986. Pour obtenir plus de renseignements au sujet de la méthodologie, etc., communiquer avec la Sous-section du développement et de l'analyse de la Division des prix, au (613)-951-4777.

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the movement of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1984 to January 1985 price change, the weights used in the Consumer Price Index are those pertaining to 1982 expenditure patterns. Data used for establishing these patterns were obtained through the 1982 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1982 revealed 81 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 81 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le mouvement des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

A compter de janvier 1985, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1982. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1982. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1982, 81 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 81 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 70% of the total 1982 current consumption expenditures reported in the 81 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 63 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1982 par les 81 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 63 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve sont utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1978 family expenditure patterns were used to compile the CPI from April 1982 to December 1984. In January 1985 the 1978 weights were replaced by those derived from the expenditure patterns of 1982. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1978 a servi au calcul de l'IPC à partir d'avril 1982 jusqu'à décembre 1984. En janvier 1985, les pondérations de 1978 ont été remplacées par d'autres dérivées de la composition des dépenses de 1982. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1978 and 1982 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1978 et de 1982 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components Composantes principales	Weights 1978 Pondérations 1978	Weights 1982 Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments	21.11	20.02
Housing - Habitation	35.37	38.14
Clothing - Habillement	9.55	8.37
Transportation - Transports	16.26	15.75
Health and personal care - Santé et soins personnels	3.71	4.02
Recreation, reading and education - Loisirs, lecture et formation Tobacco products and alcoholic beverages - Produits du tabac et	8.61	8.25
boissons alcoolisées	5.39	5.45

⁽¹⁾ Figures may not add up due to rounding.

The weights shown in Text Table II represent expenditures in 1978 (1978 quantities valued in 1978 prices) and in 1982 (1982 quantities valued in 1982 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario, K1A OT6 (Telephone: (613) 951-9606).

The indexes based on 1982 weights were linked or connected in December 1984 to the appropriate indexes based on 1978 weights which had been in use since April 1982.

Les pondérations du tableau explicatif II représentent les dépenses en 1978 (quantités et prix de 1978) et en 1982 (quantités et prix de 1982). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation Division des prix, Statistique Canada Ottawa (Ontario) K1A OT6 (Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1982 ont été enchaînés ou raccordés en décembre 1984 aux indices correspondants fondés sur les pondérations de 1978, en usage depuis avril 1982.

⁽¹⁾ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefors, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", Retail Prices and Living Costs - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. For further details see The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures, Catalogue 62-553 (Occasional).

Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest 'updating of expenditure weights is applicable strictly to the present revised official series.

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", Prix de détail et coût de la vie-Bulletin de service (nº 62-005 au catalogue), vol. 4, nº 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. Pour plus de renseignements, voir le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, nº 62-553 au catalogue (hors-série).

Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en

1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres were not included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres are included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommoda-As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in The Consumer Price Index, Reference Paper, Updating Based on 1982 Expenditures, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in two volumes: Family Food Expenditure, 1982, Catalogue 62-554; and Family Expenditure in Canada, 1982, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the Consumer Price Index, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A OT6 (613-951-9606 or 613-951-9607).

se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains n'étaient pas compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres sont maintenant pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est Les données sur les loyers utilisées calculé. sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, (hors-série), nº 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans deux volumes distincts: Dépenses alimentaires des familles au Canada, 1982, nº 62-554 au catalogue; et Dépenses des familles au Canada, 1982, nº 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel L'indice des prix à la consommation, nº 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-9607).

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 (100 cents X 100.0 114.6 cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

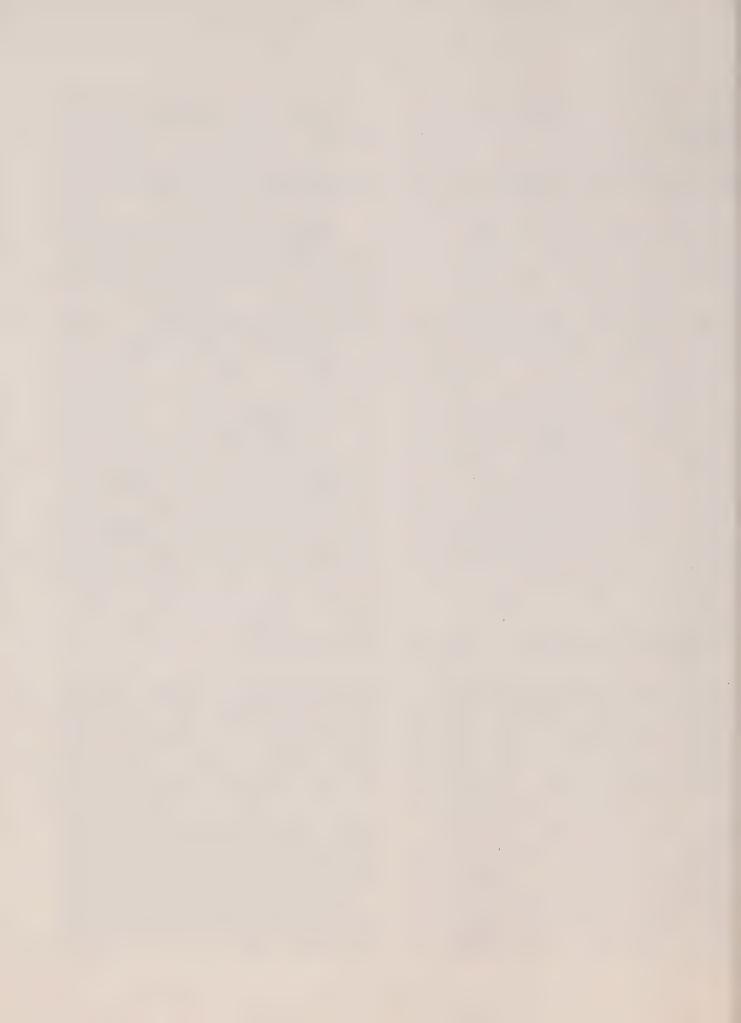

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents (100 cents X $\frac{100.0}{114.6}$ 87.3 cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activitié économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la quessubject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is now performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjust-Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. The difficulty arises with the most recent (1982) basket as we only have three years of data based on this basket. The length of this series is due to the accelerated introduction of the 1982 basket. To create a longer time series, we have chained backwards from 1982 to 1978 unlinked data from the 1978 basket. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

The seasonally adjusted price movements published in our publications are based on the series using the 1982 basket chained back to 1978. These data are based on indexes with a time base of 1982 = 100 and are not consistent with the published raw data prior to January 1985.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est maintenant effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Cette difficulté se pose à l'égard du dernier panier (1982), car nous ne disposons que de trois années de données s'y rapportant. durée de cette série s'explique par l'introduction accélérée du panier de 1982. Dans le but de créer une série plus longue, nous avons enchaîné rétrospectivement, de 1982 à 1978, les données non enchaînées du panier de 1978. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distortions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Les mouvements désaisonnalisés des prix qui paraissent dans nos publications se fondent sur les séries qui utilisent le panier de 1982 enchaîné rétrospectivement jusqu'à 1978. Ces données s'appuient sur les indices dont la période de base est 1982 = 100, et elles ne sont pas conformes aux données brutes publiées avant janvier 1985.

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time, which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 These cities are: St. John's, cities. Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey is provided in the immediately following pages.

<u>City Average Retail Prices - Item Specifica-</u> tions

Detailed Specification

Beef

Round steak. Cut from the inside part of the round in the hip section, fresh, Canada A or B brand, 1 kg.

Sirloin steak. Cut from section of hind quarter next to short loin, bone-in or bone-out, fresh, Canada A or B brand, 1 kg.

Prime rib roast. Standing, bone-in, short cut, any ribs within the first five of standard seven, fresh, Canada A or B brand, 1 kg.

Blade roast (blade out). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Blade roast (blade in). Cut from fore quarter next to rib section, fresh, Canada A or B brand, 1 kg.

Stewing beef. Boneless stewing beef, fresh, Canada A or B brand, 1 kg.

Ground beef, regular. Ground beef, with 24% to 30% fat content, fresh, 1 kg.

Pork

Pork, centre cut chops. Cut from centre of loin, fresh, bone-in, trimmed, excluding "fast fry", "brown and serve", "rib chops", mixed cut and frozen chops, 1 kg.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Les pages qui suivent, présentent une description des quelques 60 articles contenus dans l'enquête des prix moyens.

Prix de Détail Moyens par Ville - Spécifications des Articles

Spécification détaillée

Boeuf

Bifteck dans la ronde. Coupé dans la partie de la ronde, située à l'intérieur de la cuisse de l'animal, frais, marque Canada A ou B, 1 kg.

Bifteck de surlonge. Morceaux coupés dans la partie du quartier de derrière voisine du bout de longe, non désossé ou désossé, frais, marque Canada A ou B, 1 kg.

Rôti de côtes de choix. Nature, non désossé, coupe courte, toutes les côtes parmi les cinq premières sur les sept côtes normales, frais, marque Canada À ou B, 1 kq.

Rôti de palette (désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Rôti de palette (non désossé). Rôti de la partie du quartier de devant des côtes, frais, marque Canada A ou B, 1 kg.

Boeuf à ragoût. Désossé, boeuf à ragoût, frais, marque Canada A ou B, 1 kg.

Boeuf haché régulier. Boeuf haché, matières grasses: 24% à 30%, frais, 1 kg.

Porc

Porc, côtelettes, partie du centre. Coupe provenant du centre de la longe, fraîches, non désossées, parées, sauf les côtelettes "à cuisson rapide", "faire dorer et servir", "côtelettes de côtes", coupes diverses et la viande congelée, 1 kg. Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, Boneless Butt, 1 kg.

Pork, butt roast. Cut from the upper part of shoulder, fresh, skin removed, thin layer of surface fat left on, Boston Butt, 1 kg.

Bacon. Generally available manufacturers' brands (store brands excluded), smoked, side bacon, sliced, rind off, vacuum packaged, packers first line, 500 q.

Other Meat

Wieners. Generally available manufacturers' brands (store brands excluded). Made from beef and pork, ground, skinless, smoked and cooked, vacuum packaged, first grade, 450 g.

Poultry

Chicken. Eviscerated, fresh or frozen, broiler or fryer, whole, 1 to 2 kg, Grade A, price per kg.

Fish

Cod fillets. Generally available manufacturers' brands (store brands excluded), frozen, 454 g package.

Salmon. Generally available manufacturers' brands (store brands excluded). British Columbia, sockeye salmon, first grade, stamped "Canada", 213 g tin.

Dairy Products

Milk. Fresh fluid whole dairy milk, pasteurized, may be homogenized or contain vitamin D. Disposable carton of 1 L.

Milk 2%. Fresh 2% M.F. partly skimmed milk, pasteurized and may contain vitamins "A" and "D". Disposable carton of 1 L.

Butter. Lowest price available in store for first grade, creamery butter, salted, parchment or foil wrapped, 454 g.

Cheese. Generally available manufacturers' brands (store brands excluded), process cheese food square slices, with skim milk powder and/or whey powder added, plain without seasoning or condiments, individually wrapped, 250 q.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, rôti désossé, 1 kg.

Porc, rôti de porc. Rôti coupé dans la partie supérieure de l'épaule, frais, couenne enlevée, recouvert d'une mince couche de gras, "Boston Butt", 1 kq.

Bacon. Marques des fabriquants largement distribuées (sauf les marques des magasins), bacon de flanc, fumé, en tranche, couenne enlevée, emballé sous vide, fabricants de première qualité, 500 q.

Autre viande

Saucisses de Francfort. Marques des fabricants largement distribuées (sauf les marques des magasins). Faites de boeuf et de porc haché, sans peau, fumées et prêtes à servir, emballées sous vide, première qualité, 450 q.

Volaille

Poulet. Vidé, frais ou congelé, à griller ou à frire, entier, de 1 à 2 kg, catégorie A, vendu au kg.

Poisson

Filets de morue. Marques des fabricants largement distribuées (sauf les marques des magasins), congelés, paquet de 454 q.

Saumon. Marques des fabricants largement distribuées (sauf les marques des magasins). Saumon de Colombie-Britannique, sockeye, de première qualité, étiqueté "Canada", boîte de 213 g.

Produits laitiers

Lait. Lait de laiterie frais, liquide, entier, pasteurisé, peut être homogénéisé ou additionné de vitamine D. Contenant de 1 L (en carton), non consigné.

Lait 2%. Lait frais, partiellement écrémé, 2% de matières grasses de lait, pasteurisé, pouvant être additionné de vitamines A ou D. Contenant de 1 L (en carton), non consigné.

Beurre. Beurre de première qualité, le moins cher disponible dans le magasin, beurre de laiterie, salé, enveloppé dans du parchemin ou dans un emballage d'aluminium, 454 g.

Fromage. Marques des fabricants largement distribuées (sauf les marques des magasins), préparation de fromage fondu, tranches carrées avec lait écrémé en poudre et (ou) poudre de lactosérum, sans assaisonnement, ni condiment, enveloppées individuellement, 250 g.

Powdered milk. Generally available manufacturers' brands (store brands excluded), powdered skim milk, 1 kg cardboard package, may be pasteurized or vitaminized.

Evaporated milk. Generally available manufacturers' brands (store brands excluded), unsweetened, may be vitaminized, 385 mL can.

Eggs. Large eggs, Grade A, in a carton of 1 dozen.

Bakery and Cereal Products

Bread. Store brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 g.

Bread. Manufacturers' brands, pan style standard loaf, sliced and wrapped, prepared from white wheat flour, vitamin enriched, 675 q.

Soda crackers. Generally available manufacturers' brand (store brands excluded), salted, unsalted or saltines, 450 g.

Macaroni. Generally available manufacturers' brands (store brands excluded) dry, tubular shape, straight or elbow (ready-cut) macaroni. May be vitaminized, 500 g package.

Flour, 2.5 kg. Generally available manufacturers' brands (store brands excluded) of white all purpose or bread flour, vitaminized may be pre-sifted. Excluding instantized, pastry and other special types.

Corn flakes. Generally available manufacturers' brands (store brands excluded), corn flakes, 675 g package.

Fruit

Bananas. First grade, price per kg.

Grapefruit. United States, white, may be seedless, size 48's, if not available 40's or 56's, good quality, price per kq.

Oranges. California, medium size (138 or 113) price per kg.

Orange juice. Generally available manufacturers' brands (store brands excluded), unsweetened or 5% sugar added, 1.36 L.

Lait en poudre. Marques des fabriquants largement distribuées (sauf les marques des magasins), lait écrémé en poudre, contenant en carton de 1 kg, peut être pasteurisé ou vitaminé.

Lait évaporé. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré, peut être additionné de vitamines, boîte de 385 mL.

Oeufs. Oeufs de grosse taille, catégorie A, en boîte de 12.

Céréales et produits de boulangerie

Pain. Marques des magasins, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 g.

Pain. Marques des fabricants, pain blanc ordinaire, format courant en tranches et emballé, fait à partir de farine de blé blanche, enrichi de vitamines, 675 q.

Biscuits soda. Marques des fabricants largement distribuées (sauf les marques des magasins), salés, non salés ou "saltines", paquet de 450 g.

Macaroni. Marques des fabricants largement distribuées (sauf les marques des magasins), macaroni, forme tubulaire, droit ou courbé (coupé). Peut-être vitaminé, paquet de 500 g.

Farine, 2.5 kg. Marques des fabricants largement distribuées (sauf les marques des magasins) blanche tout usage ou farine à pain, additionnée de vitamines peut être prétamisée. Exclure la farine instantanée, la farine à pâtisserie et les autres types spéciaux de farine.

Flocons de maïs. Marques des fabricants largement distribuées (sauf les marques des magasins), maïs en flocons, paquet de 675 q.

Fruits

Bananes. Première qualité, vendues au kg.

Pamplemousses. Des États-Unis, à chair blanche, grosseur 48; autrement, grosseur 40 ou 56, bonne qualité, prix au kg.

Oranges. De Californie, grosseur moyenne (138 ou 113) prix au kg.

Jus d'orange. Marques des fabricants largement distribuées (sauf les marques des magasins), non sucré ou additionné de 5% de sucre, boîte de 1.36 L.

Vegetables

Cabbage. Fresh, domestic or imported, green cabbage, good quality, price per kg of an average size head.

Carrots. Tops completely removed, good quality, in plastic or cellophane packages price per kq.

Celery. Celery stalks, green, fresh, may be trimmed or clipped, price per kg.

Lettuce. Fresh head, green, good quality, average size head, price per kg.

Mushrooms. Cultivated, fresh, domestic or imported, Canada No. 1, 400 g.

Onions. Cooking onions, common white, yellow or red, dry, good quality, in plastic or cellophane packages price per kg.

Potatoes. Table potatoes, white, Canada No. 1, 4.54 kg.

French fried potatoes. Generally available manufacturers' brands (store brands excluded), frozen, straight or regular cut, grade A or fancy, 1 kg poly bag.

Beans. Generally available manufacturers' brands (store brands excluded) of cooked beans with pork and tomato sauce, 398 mL.

Tomatoes, canned. Generally available manufacturers' brands (store brands excluded), of canned field tomatoes, choice grade, 796 mL.

Tomato juice. Generally available manufacturers' brands (store brands excluded), juice of fresh tomatoes, may contain salt, sugar or dextrose, fancy grade, 1.36 L.

Sugar and Sweets

Sugar. White, granulated, cane or beet sugar, bag of $2\ kg$.

Beverages

Coffee, roasted. Generally availale manufacturers' brands (store brands excluded), roasted whole beans, regular or all purpose ground coffee, good quality, 369 g bag.

Coffee, instant. Generally available manufacturers' brands (store brands excluded), dried coffee, extract soluble, pure or may have added dextrin, dextrose or maltose, 227 g.

Légumes

Choux. Frais, variété canadienne ou importée, choux vert, bonne qualité, prix au kg d'un chou de grosseur moyenne.

Carottes. Queues complètement enlevées, bonne qualité, paquet de matière plastique ou de cellophane, vendues au kg.

Céleri. Pieds de céleri, verts, frais, peuvent être taillés, prix au kg.

Laitue. Fraîche, verte, bonne qualité, taille moyenne, prix au kg.

Champignons. Cultivés, frais, domestiques ou importés, catégorie Canada nº 1, 400 g.

Oignons. Oignons à cuire, ordinaires, blancs, jaunes ou rouges, secs, bonne qualité, en paquet de matière plastique ou de cellophane, vendus au kg.

Pommes de terre. Pommes de terre de table, à chair blanche, catégorie Canada n^0 1, sac de 4.54 kg.

Pommes de terre frites. Marques des fabricants largement distribuées (sauf les marques des magasins), congelées, coupe ordinaire ou droite, catégorie A ou de fantaisie, sac de 1 kg en matière plastique.

Fèves au lard. Marques des fabricants largement distribuées (sauf les marques des magasins), de fèves au lard cuites avec du porc et de la sauce tomate, boîte de 398 mL.

Tomates, en conserve. Marques des fabricants largement distribuées (sauf les marques des magasins), de tomates en conserve de plein champ, catégorie de choix, boîte de 796 mL.

Jus de tomates. Marques des fabricants largement distribuées (sauf les marques des magasins) de jus de tomates fraîches; peut contenir du sel, du sucre ou du dextrose, catégorie de fantaisie, 1.36 L.

Sucre et produits sucrés

Sucre. Blanc, cristallisé, de canne ou de betterave, sac de 2 kg.

Boissons

Café torréfié. Marques des fabricants largement distribuées (sauf les marques des magasins), torréfié, en grains entiers, ordinaire ou moulu "tout usage", bonne qualité, sac de 369 g.

Café instantané. Marques des fabricants largement distribuées (sauf les marques des magasins), séché, extrait, soluble, pur ou peut être additionné de dextrine, de dextrose ou de maltose, pot de 227 q.

Tea bags. Generally available manufacturers' brands (store brands excluded), orange pekoe tea bags, package of 72 two-cup paper bags (227 q).

Fats

Shortening. Generally available manufacturers' brands (store brands excluded), processed from blends of edible vegetable oils and animal fats or 100% vegetable oils. May be partly hydrogenated, carton of 454 q.

Miscellaneous Groceries

Tomato ketchup. Generally available manufacturers' brands (store brands excluded), made from juice of ripe tomatoes, sugar, vinegar and seasonings, 1 L bottle.

Soup. Generally available manufacturers' brands (store brands excluded) of vegetable soup, 284 mL.

Infants' food. Generally available manufacturers' brands (store brands excluded) of baby food, strained or vegetable mixture, glass jar or can of 128 mL.

Peanut butter. Generally available manufacturers' brands (store brands excluded), made from roasted peanuts; may be labelled smooth or creamy, 500 q.

Jelly powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 85 g.

Soft drinks. Generally available manufacturers' brands (store brands excluded), cola flavour. Returnable bottle type, excluding deposits. One bottle of 750 mL.

Supplies and Personal Care Items

Synthetic detergent powder. Generally available manufacturers' brands (store brands excluded), all purpose, granulated or powdered, 6 L.

Facial tissue. Generally available manufacturers' brands (store brands excluded), package of 200 double tissues, approximately 20.6 cm x 23.9 cm.

Bathroom tissue. Generally available manufacturers' brands (store brands excluded) of white or pastel shades, medium quality, perforated, two ply sheets. Units of four, about 600 to 650 sheets per roll, approx. 10.16 cm x 12.7 cm, wrapped in poly.

Thé en sachets. Marques des fabricants largement distribuées (sauf les marques des magasins), thé en sachets "orange Pekoe" paquet de 72 sachets de papier pour deux tasses chacun (227 g).

Matières grasses

Graisse végétale. Marques des fabricants largement distribuées (sauf les marques des magasins), fabriquée à partir de mélanges d'huiles végétales comestibles et de graisses animales ou d'huile végétale à 100%. Peut être partiellement hydrogénée, carton de 454 g.

Articles divers d'épicerie

Ketchup aux tomates. Marques des fabricants largement distribuées (sauf les marques des magasins), fait de jus de tomates mûres, de sucre, de vinaigre et d'assaisonnements, bouteille de 1 L.

Soupe. Marques des fabricants largement distribuées (sauf les marques des magasins) de soupe aux légumes, boîte de 284 ml.

Nourriture pour bébés. Marques des fabricants largement distribuées (sauf les marques des magasins), de nourriture pour bébés, égouttée ou en purées, pots de verre ou boîte de 128 mL.

Beurre d'arachides. Marques des fabricants largement distribuées (sauf les marques des magasins), fait à partir d'arachides torréfiées; l'étiquette peut porter la mention "crémeux", 500 q.

Poudre à gelée. Marques des fabricants largement distribuées (sauf les marques des magasins), de poudre à gelée pour dessert à saveur, paquet de 85 q.

Boissons gazeuses. Marques des fabricants largement distribuées (sauf les marques des magasins), saveur de cola. Bouteille consignée, prix de la bouteille non compris. Une bouteille de 750 mL.

Fournitures et articles de soins personnels

Détersif synthétique en poudre. Marques des fabricants largement distribuées (sauf les marques des magasins), tout usage, cristallisé ou en poudre, boîte de 6 L.

Papier mouchoir. Marques des fabricants largement distribuées (sauf les marques des magasins), paquet de 200 mouchoirs double épaisseur, taille approximative de 20.6 cm $\times~23.9$ cm.

Papier hygiénique. Marques des fabricants largement distribuées (sauf les marques des magasins), blanc ou de couleur pastel, qualité moyenne, perforé, double épaisseur. Paquets de quatre, d'environ 600 à 650 feuilles par rouleau, 10.16 cm x 12.7 cm, enveloppés dans du polyéthylène.

Toothpaste. Generally available manufacturers' brands (store brands excluded), standard dentifrice, may have fluoride, 100 mL.

Toilet soap. Generally available manufacturers' brands (store brands excluded). Selection confined to wrapped and popular brands sold in one or multiple units (up to four bars per package. Guest or bath sizes, as well as varieties with high synthetic or perfume content, excluded. Price per bar.

Tobacco

Cigarettes. Generally available popular brands, king size, filter tip, carton of 200.

Average Retail Prices for Gasoline

Tables 15 through 20 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 21 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. prices collected include all applicable They are Federal and Provincial taxes. presented as average prices per litre. series presented in Table 21 are confined to 16 urban centres and for the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Pâte dentifrice. Marques des fabricants largement distribuées (sauf les marques des magasins), pâte dentifrice ordinaire peut contenir du fluorure, tube de 100 mL.

Savon de toilette. Marques des fabricants largement distribuées (sauf les marques des magasins). Choix limité aux marques emballées et populaires vendues en paquet d'un ou plusieurs pains (jusqu'à quatre unités). Les savons de taille pour invité ou de bain, de même que les variétés à contenu synthétique ou de parfum, sont exclus. Prix à l'unité.

Tabacs

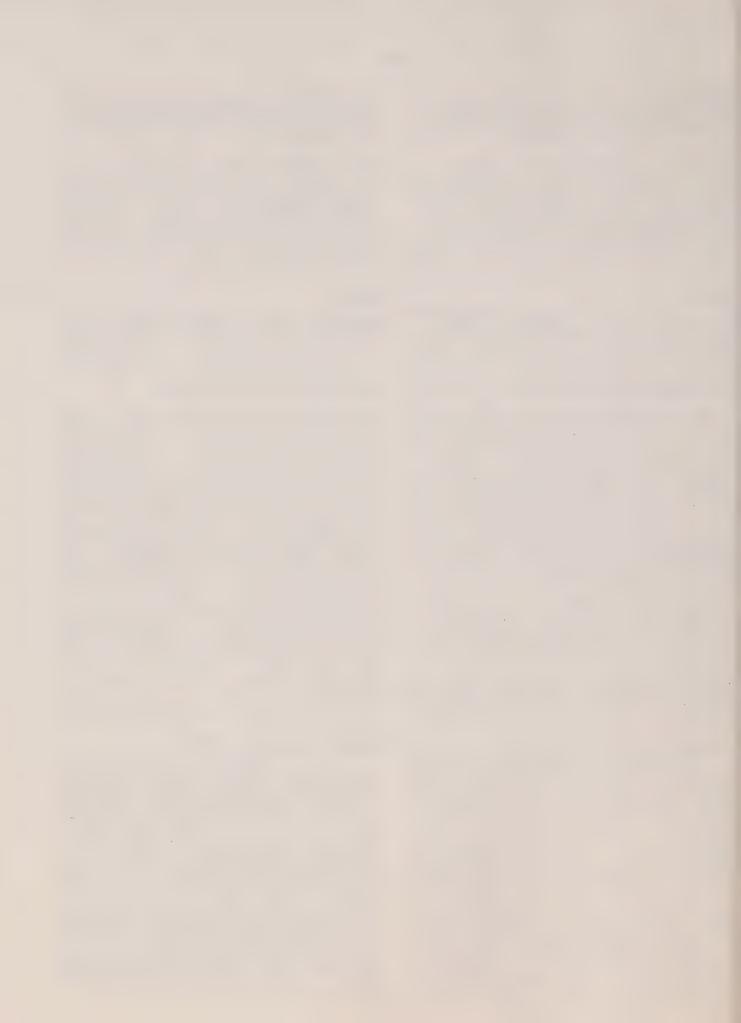

Cigarettes. Marques populaires couramment disponibles, grand format, bout filtre, carton de 200.

Prix de détail moyens de l'essence

Les tableaux 15 à 20 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 21 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centre urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 21 se l'mitent à 16 centres urbains, pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

Appendice 5

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 22 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.(1)

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's - Halifax Charlottetown - Halifax - Halifax Saint John Ottawa - Halifax Toronto - Montréal Ottawa - Toronto Toronto - Winnipeg Regina - Winnipeg Edmonton - Winnipeg - Vancouver Edmonton

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

(1) See Table 14 and Appendix 4.

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉ-RENTES VILLES DU CANADA

Le tableau 22 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville(1) pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's - Halifax Charlottetown - Halifax Saint John - Halifax - Halifax Ottawa Toronto - Montréal Ottawa - Toronto - Winnipeg Toronto - Winnipeq Regina Edmonton - Winnipea Edmonton - Vancouver

A l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en applicant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

⁽¹⁾ Voir tableau 14 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-to-city retail price relationships may be significantly affected by the timing and the relative rate of price change occuring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

Footnotes for Table 22

- (2) The weights shown are rounded 1982 weights as contained in the report The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures (Occasional), Catalogue 62-553. They are provided for illustration only; the weights actually used are combined cities weights with adjustments for price change since 1982.
- (3) Includes the following sub-groups: Condiments, spices and vinegar, sugar and sugar preparations, coffee and tea, fats and oils and other foods, food preparation materials and food preparations.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Notes pour le tableau 22

- (2) Les poids indiqués sont les poids arrondis pour 1982 figurant dans Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982 (hors-série), nº 62-553 au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1982.
- (3) Comprend les sous-groupes suivants: Condiments, épices et vinaigre, sucre et préparations à base de sucre, le café et le thé, les huiles et matières grasses et les autres aliments, ingrédients et préparations alimentaires.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless. organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transporation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are Since Canadian public servants excluded. pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créé. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en Les dépenses de logement, de considération. chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses Statistique Canada reçoit chaque mois sources. une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home Meals away from home Household maintenance and services	104 9 11
Household supplies	8
Communications	3
Domestic help (depending on location)	2-8

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

The 1986 Profiles will put you on the fast track to any Canadian community you want to study. . .

You're looking for a fast introduction to the social and demographic realities of a city, a town, a municipality or an entire province. And you don't have the time to wade through piles of statistics.

Focus in on the area of your choice with a CENSUS PRO-FILE. Each PROFILE features more than 46 items of information on the area that interests you... from population counts, to the living arrangements of its elderly.

Choose a PROFILE on any one of

- 6009 Census Subdivisions (municipalities)
- 266 Census Divisions (counties)
- 282 Federal Electoral Districts
- 25 Census Metropolitan Areas
- 114 Census Agglomerations
- · a variety of urban/rural breakdowns
- · and, more.

With 52 publications in this series, we can fast track you to any destination you want.

For more information, call us at 1-800-267-6677 and request the Census brochure (which includes ordering information), or write us at:

Publications Sales Statistics Canada Ottawa, Ontario K1A OT6 Le Canada et ses régions sont à votre portée grâce aux Profils du recensement de 1986.

Vous désirez connaître le portrait socio-démographique d'une province, d'une ville ou d'une municipalité en particulier, mais la perspective d'avoir à vous battre avec des montagnes de statistiques vous effraie?

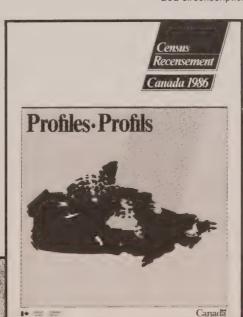

Balayez toute appréhension! Les Profils du recensement de 1986 vous épargneront temps et effort. Chaque Profil présente plus de 46 éléments différents d'information sur chacune des régions répertoriées. Des chiffres de population aux données sur les modes de vie de la population âgée, vous saurez tout.

Vous n'avez qu'à faire votre choix. Et quel choix! Les 52 publications de la série portent sur:

- 6,009 municipalités (subdivisions de recensement);
- 266 comtés (divisions de recensement);
- 282 circonscriptions électorales fédérales;
 - 25 régions métropolitaines de recensement;
 - 114 agglomérations de recensement;
 - diverses régions urbaines et rurales;
 - et plus encore .

Pour de plus amples renseignements, composez le 1-800-267-6677 et demandez notre brochure, qui vous renseignera sur les modalités de commande. Ou, si vous le préférez, écrivez à:

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit, Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolinque et le système d'extraction de Statistique Canada.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
 - nil or zero.
- -- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A OT6.

This publication was prepared under the direction of:

- Barbara J. Slater, Director, Prices Division
- J. Arthur Ridgeway, Chief, Consumer Prices Section
- Harold Harnarine, Head,
 Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
 - néant ou zéro.
- -- nombres infimes.
 - P nombres provisoires.
 - r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A OT6.

Cette publication a été rédigée sous la direction de:

HIGHLIGHTS

Consumer Price Behaviour

Second Quarter, 1988

Trends in the All-items index

In seasonally adjusted terms, the All-items Consumer Price Index (CPI) advanced by 0.9% between March and June 1988 (second quarter). This increase remained unchanged from that observed between December 1987 and March 1988 (first quarter). In monthly terms, the seasonally adjusted increases in the CPI decelerated steadily from 0.5% reported in March to 0.2% observed in June.

Unadjusted, the CPI advanced by 1.1% in the second quarter of 1988, extending the same rate of increase as reported in the first quarter. The annual rate of change, as measured by the averages of the year-to-year increases for the three months in the quarter, has indicated a slight slowing. In the last quarter of 1987, the CPI rose annually by 4.2%; in the first and second quarter of 1988, the annual increase had declined marginally to 4.1% and 4.0% respectively.

Major Contributors to the Second Quarter Change

As indicated before, the CPI unadjusted advanced by 1.1% in the second quarter. The Food index rose by 2.0%, while the All-items excluding Food index increased by 0.9%.

The largest proportion of the latest quarterly increase in the CPI resulted from the 2.0% increase in the Food index. The Tobacco Products and Alcoholic Beverages index, which advanced by 3.7%, and the Housing index, which rose by 0.7%, each contributed almost equally to the latest rise in the All-items index. A smaller impact emerged from a rise of 1.7% in the Recreation, Reading and Education index. Less noticeable contributions originated from increases of 1.1% and 1.4% respectively in the Clothing and the Health and Personal Care indexes. In the same time period, the Transportation index fell by 0.4%, as a result of considerable offsetting price movements in some of its components.

The Food index rose by 2.0% in the latest period, as the Food Purchased from Stores index advanced by 2.3%, while the index for Food Purchased from Restaurants increased by 1.3%. Most of the increases in the Food Purchased from Stores index was attributable to higher prices for Fresh Fruit (up 16.1%) and Fresh Vegetables (up 7.4%). A large part of these increases was seasonal in nature. Prices of dairy products increased by 2.2%, reflecting higher prices paid out to producers. Pork prices advanced by 9.9%, while a 1.7% rise in the prices of cereal grains and cereal products was observed.

A large proportion of the 3.7% rise in the Tobacco Products and Alcoholic Beverages index was due to an advance of 6.1% in the Tobacco Products component. Price increases for tobacco products followed provincial tax increases in Prince Edward Island, New Brunswick, Saskatchewan and British Columbia in April and in Ontario in May. Prices of alcoholic beverages increased by a slower 2.2%, as tax increases were initiated by the governments of Newfoundland and British Columbia. Increased manufacturers' costs and transportation charges, along with a depreciation in the exchange rate against some European currencies, have also been cited as contributors to the latest rise in prices.

FAITS SAILLANTS

Comportement des prix à la consommation

Deuxième trimestre de 1988

Tendances de l'indice d'ensemble

L'indice d'ensemble désaisonnalisé des prix à la consommation (IPC) a avancé de 0.9% entre mars et juin 1988 (deuxième trimestre). Ce taux d'augmentation est le même que celui observé entre décembre 1987 et mars 1988 (premier trimestre). D'un mois à l'autre, il y a eu ralentissement constant du taux de progression désaisonnalisé de l'IPC, de 0.5% en mars à 0.2% en juin.

L'IPC non désaisonnalisé a avancé de 1.1% au deuxième trimestre de 1988, soit le même taux d'augmentation qu'au premier trimestre. Le taux annuel de variation, qui représente la moyenne des augmentations d'une année à l'autre pour les trois mois du trimestre, a légèrement décéléré. Au dernier trimestre de 1987, l'IPC affichait un taux annuel d'augmentation de 4.2%; aux premier et deuxième trimestres de 1988, ce taux avait quelque peu fléchi, s'établissant à 4.1% et 4.0% respectivement.

Principaux facteurs de la variation au deuxième trimestre

Comme il a été dit plus haut, l'IPC non désaisonnalisé a avancé de 1.1% au deuxième trimestre. L'indice des aliments a grimpé de 2.0%, alors que l'indice d'ensemble sans les aliments augmentait de 0.9%.

La plus grande partie de la dernière augmentation trimestrielle de l'IPC découle de l'accroissement de 2.0% de l'indice des aliments. L'indice des produits du tabac et des boissons alcoolisées, qui a gagné 3.7%, et l'indice de l'habitation, qui a grimpé de 0.7%, ont contribué presque également à la dernière hausse de l'indice d'ensemble. Le gain de 1.7% de l'indice des loisirs, de la lecture et de la formation y a également contribué, mais dans une mesure moindre. L'effet d'entraînement exercé par les augmentations de 1.1% de l'indice de l'habillement et de 1.4% de l'indice de la santé et des soins personnels a été plus discret. Au cours de la même période, l'indice des transports a chuté de 0.4%, certaines de ces composantes ayant affiché des mouvements de prix considérables mais en sens opposé.

L'indice des aliments a grimpé de 2.0% au cours de la période, l'indice des aliments achetés au magasin ayant avancé de 2.3% et celui des aliments achetés au restaurant, de 1.3%. L'augmentation de l'indice des aliments achetés au magasin est attribuable dans une large mesure au relèvement des prix des fruits frais (16.1%) et des légumes frais (7.4%). Une grande partie de ces hausses avait un caractère saisonnier. Les prix des produits laitiers ont augmenté de 2.2% à la suite de l'accroissement des prix payés aux producteurs. Les prix du porc ont avancé de 9.9% et les prix des grains de céréales et des produits céréaliers ont fait un bond de 1.7%.

La montée de 3.7% de l'indice des produits du tabac et des boissons alcoolisées est due pour une bonne part à l'avance de 6.1% de la composante des produits du tabac. Les majorations des produits du tabac font suite aux hausses des taxes provinciales à l'Île-du-Prince-Édouard, au Nouveau-Brunswick, en Saskatchewan et en Colombie-Britannique en avril, et en Ontario en mai. Le taux d'augmentation des prix des boissons alcoolisées a été moins rapide, s'établissant à 2.2%, des hausses de taxes ayant été décrétées par les gouvernements de Terre-Neuve et de la Colombie-Britannique. La hausse des coûts des fabricants et des frais de transport, de même que la dépréciation du dollar canadien par rapport à certaines monnaies européennes, sont aussi au nombre des facteurs cités pour expliquer la dernière montée des prix.

The Housing index climbed by 0.7% in the quarter, explained, to a large extent, by a 1.1% rise in owned accommodation charges. This latter increase was largely due to a 3.5% increase in the prices of new homes. An increase of 0.6% in the Rented Accommodation index also contributed to the latest rise in the Housing index. At the same time, seasonally higher rates were reported for traveller accommodation. Other modest contributions came from increases in electricity rates, child care charges and the prices of selected household equipment and pet food. The rise in the Housing index was moderated by price declines observed for long-distance telephone services, piped gas and fuel oil.

A rise of 1.7% in the Recreation, Reading and Education index resulted mainly from higher prices for selected recreational vehicles and a rise in the fees and dues associated with the use of seasonal recreational facilities. Prices of photographic goods also rose, as did charges related to spectator entertainment performances. The Reading index moved up by 1.4%, as prices of newspapers rose by 2.3% in this second quarter.

The contributions made to the latest rise in the All-items index from increases of 1.1% in the Clothing index and 1.4% in the Health and Personal Care index were smaller. The Clothing index mainly reflected higher prices for women's sportswear and foundation garments and men's pants. The rise in the Health and Personal Care Index resulted mainly from higher prices for medicinal and pharmaceutical products and dental care services. Price increases in personal care supplies and services also contributed, to a slightly lesser extent, to the latest change.

The Transportation index declined by 0.4%, largely due to the powerful downward pressure of a 20.7% fall in the Air Transportation index. Air fares fell mainly due to a higher proportion of passengers flying at "seat-sale" prices and some lower seasonal rates reflected in this period. A considerable part of this downward impact was offset by increases in the rental and leasing of automobiles, gasoline prices and automobile maintenance and repair charges.

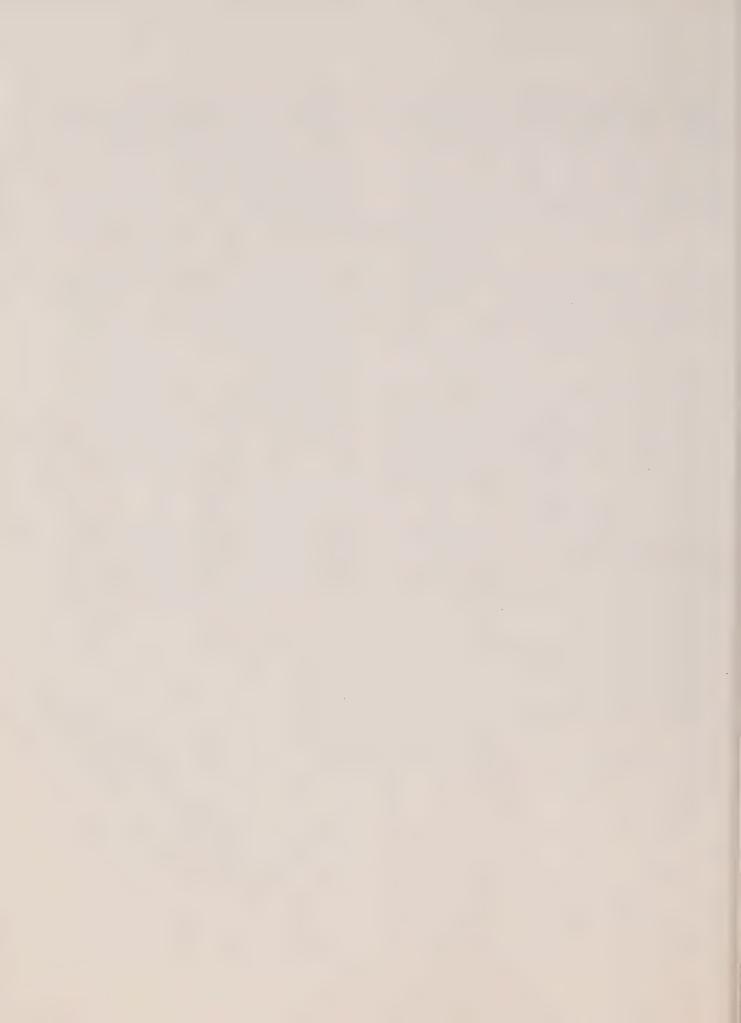

L'indice de l'habitation a grimpé de 0.7% au cours du trimestre, ce qui s'explique dans une large mesure par le gain de 1.1% des frais de logement en propriété. Cette dernière hausse découle surtout de l'augmentation de 3.5% des prix des maisons neuves. Une hausse de 0.6% de l'indice du logement en location a également contribué au dernier gain de l'indice de l'habitation. Par ailleurs, des hausses saisonnières ont été observées pour les tarifs d'hébergement de voyageurs. L'accroissement des tarifs de l'électricité, des frais de garde d'enfants et des prix de certains articles d'ameublement et aliments pour animaux de maison a aussi modestement contribué à la progression de l'indice de l'habitation. Cette progression a été ralentie par le recul des frais d'appels interurbains, des tarifs du gaz canalisé et des prix du mazout.

La montée de 1.7% de l'indice des loisirs, de la lecture et de la formation résulte surtout de l'accroissement des prix de certains véhicules de loisirs et de la hausse des frais et cotisations pour l'utilisation saisonnière d'installations de loisirs. Les prix du matériel photographique ont aussi augmenté de même que les droits d'entrée aux spectacles. L'indice de la lecture a gagné 1.4%, les prix des journaux ayant haussé de 2.3% au cours du deuxième trimestre.

L'augmentation de 1.1% de l'indice de l'habillement et la hausse de 1.4% de l'indice de la santé et des soins personnels ont eu moins d'incidence sur l'indice d'ensemble. La progression de l'indice de l'habillement traduit surtout le relèvement des prix des vêtements de sport et des vêtements de base pour femmes, ainsi que des pantalons pour hommes. Le gain de l'indice de la santé et des soins personnels résulte principalement de l'accroissement des prix des médicaments et produits pharmaceutiques et des frais dentaires. La hausse des prix des produits et services de soins personnels a également contribué, mais dans une mesure moindre, à la dernière variation de l'indice d'ensemble.

L'indice des transports a reculé de 0.4% en raison surtout de l'effet modérateur important exercé par la chute de 20.7% de l'indice du transport aérien. Les tarifs aériens ont chuté parce qu'une plus forte proportion de passagers ont bénéficié de "soldes de places" et parce qu'il y a eu baisse saisonnière de certains tarifs. Une partie importante de cet effet modérateur a été contrebalancée par l'augmentation des tarifs de location d'automobiles, des prix de l'essence et des frais d'entretien et de réparation d'automobiles.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Place-to-place comparative retail price information forms Part IV of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part V.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n^0 62-001 au catalogue.

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie IV de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie V.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

⁽¹⁾ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principale de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiés sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the movement of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part IV of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1984 to January 1985 price change, the weights used in the Consumer Price Index are those pertaining to 1982 expenditure patterns. Data used for establishing these patterns were obtained through the 1982 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1982 revealed 81 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 81 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

Appendice 1

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le mouvement des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie IV de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

A compter de janvier 1985, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1982. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1982. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1982, 81 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 81 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 70% of the total 1982 current consumption expenditures reported in the 81 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 63 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1982 par les 81 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 63 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve sont utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1978 family expenditure patterns were used to compile the CPI from April 1982 to December 1984. In January 1985 the 1978 weights were replaced by those derived from the expenditure patterns of 1982. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1978 a servi au calcul de l'IPC à partir d'avril 1982 jusqu'à décembre 1984. En janvier 1985, les pondérations de 1978 ont été remplacées par d'autres dérivées de la composition des dépenses de 1982. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE II. Comparison of 1978 and 1982 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF II. Comparaison des pondérations des dépenses de 1978 et de 1982 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1978	Weights 1982
Composantes principales	Pondérations 1978	Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments	21.11	20.02
Housing - Habitation	35.37	38.14
Clothing - Habillement	9.55	8.37
Transportation - Transports	16.26	15.75
Health and personal care - Santé et soins personnels	3.71	4.02
Recreation, reading and education - Loisirs, lecture et formation Tobacco products and alcoholic beverages - Produits du tabac et	8.61	8.25
boissons alcoolisées	5.39	5.45

⁽¹⁾ Figures may not add up due to rounding.

The weights shown in Text Table II represent expenditures in 1978 (1978 quantities valued in 1978 prices) and in 1982 (1982 quantities valued in 1982 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario, K1A OT6 (Telephone: (613) 951-9606).

The indexes based on 1982 weights were linked or connected in December 1984 to the appropriate indexes based on 1978 weights which had been in use since April 1982.

Les pondérations du tableau explicatif II représentent les dépenses en 1978 (quantités et prix de 1978) et en 1982 (quantités et prix de 1982). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation Division des prix, Statistique Canada Ottawa (Ontario) K1A OT6 (Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1982 ont été enchaînés ou raccordés en décembre 1984 aux indices correspondants fondés sur les pondérations de 1978, en usage depuis avril 1982.

⁽¹⁾ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", Retail Prices and Living Costs - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. For further details see The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures, Catalogue 62-553 (Occasional).

Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", Prix de détail et coût de la vie-Bulletin de service (nº 62-005 au catalogue), vol. 4, nº 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. Pour plus de renseignements, voir le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, nº 62-553 au catalogue (hors-série).

Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépensec des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en

1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres were not included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres are included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in The Consumer Price Index, Reference Paper, Updating Based on 1982 Expenditures, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in two volumes: Family Food Expenditure, 1982, Catalogue 62-554; and Family Expenditure in Canada, 1982, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the Consumer Price Index, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A OT6 (613-951-9606 or 613-951-9607).

se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains n'étaient pas compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres sont maintenant pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, (hors-série), nº 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans deux volumes distincts: Dépenses alimentaires des familles au Canada, 1982, nº 62-554 au catalogue; et Dépenses des familles au Canada, 1982, nº 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel L'indice des prix à la consommation, n^o 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-9607).

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 (100 cents X $\frac{100.0}{114.6}$ cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents (100 cents X 100.0 114.6 87.3 cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

Appendice 3

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activitié économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la quessubject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is now performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjust-Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. The difficulty arises with the most recent (1982) basket as we only have three years of data based on this basket. The length of this series is due to the accelerated introduction of the 1982 basket. To create a longer time series, we have chained backwards from 1982 to 1978 unlinked data from the 1978 basket. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

The seasonally adjusted price movements published in our publications are based on the series using the 1982 basket chained back to 1978. These data are based on indexes with a time base of 1982 = 100 and are not consistent with the published raw data prior to January 1985.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est maintenant effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Cette difficulté se pose à l'égard du dernier panier (1982), car nous ne disposons que de trois années de données s'y rapportant. durée de cette série s'explique par l'introduction accélérée du panier de 1982. Dans le but de créer une série plus longue, nous avons enchaîné rétrospectivement, de 1982 à 1978, les données non enchaînées du panier de 1978. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distortions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Les mouvements désaisonnalisés des prix qui paraissent dans nos publications se fondent sur les séries qui utilisent le panier de 1982 enchaîné rétrospectivement jusqu'à 1978. Ces données s'appuient sur les indices dont la période de base est 1982 = 100, et elles ne sont pas conformes aux données brutes publiées avant janvier 1985.

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 These cities are: St. John's, cities. Halifax, Sydney, Charlottetown, Moncton, John, Québec, Chicoutimi, Saint Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins succursales indépendants. (Une entreprise à multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 15 through 20 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 21 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 21 are confined to 16 urban centres and for the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 15 à 20 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 21 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centre urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 21 se limitent à 16 centres urbains, pour la période allant de janvier 1986 jusqu'au dernier mois disponible. données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless. organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transporation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créé. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

Principal commodity group	Number of items priced (if available)
Food at home	104
Meals away from home	9
Household maintenance and services	11
Household supplies	8
Communications	3
Domestic help (depending on location)	2–8

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

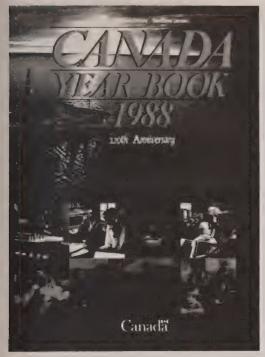

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

1986 CENSUS PROFILES

LES PROFILS DU RECENSEMENT DE 1986

YOUR TICKET YOUR ANY TO ANY COMMUNITY COMMUNITY IN CANADA

VOTRE LAISSEZ-PASSE LAISSEZ-PASSE POUR MIEUX POUR MIEUX CONNAITRE CONNAITRE LES CANADIEN

The 1986 Profiles will put you on the fast track to any Canadian community you want to study . . .

You're looking for a fast introduction to the social and demographic realities of a city, a town, a municipality or an entire province. And you don't have the time to wade through piles of statistics.

Focus in on the area of your choice with a CENSUS PRO-FILE. Each PROFILE features more than 46 items of information on the area that interests you... from population counts, to the living arrangements of its elderly.

Choose a PROFILE on any one of

- 6009 Census Subdivisions (municipalities)
- 266 Census Divisions (counties)
- 282 Federal Electoral Districts
- 25 Census Metropolitan Areas
- 114 Census Agglomerations
- · a variety of urban/rural breakdowns
- and, more.

With 52 publications in this series, we can fast track you to any destination you want.

For more information, call us at 1-800-267-6677 and request the Census brochure (which includes ordering information), or write us at:

Publications Sales Statistics Canada Ottawa, Ontario K1A 0T6 Le Canada et ses régions sont à votre portée grâce aux Profils du recensement de 1986.

Vous désirez connaître le portrait socio-démographique d'une province, d'une ville ou d'une municipalité en particulier, mais la perspective d'avoir à vous battre avec des montagnes de statistiques vous effraie?

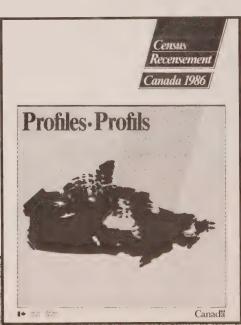

Balayez toute appréhension! Les Profils du recensement de 1986 vous épargneront temps et effort. Chaque Profil présente plus de 46 éléments différents d'information sur chacune des régions répertoriées. Des chiffres de population aux données sur les modes de vie de la population âgée, vous saurez tout.

Vous n'avez qu'à faire votre choix. Et quel choix! Les 52 publications de la série portent sur:

- 6,009 municipalités (subdivisions de recensement);
- 266 comtés (divisions de recensement);
- 282 circonscriptions électorales fédérales;
 - 25 régions métropolitaines de recensement;
 - 114 agglomérations de recensement;
 - diverses régions urbaines et rurales;
 - et plus encore . . .

Pour de plus amples renseignements, composez le 1-800-267-6677 et demandez notre brochure, qui vous renseignera sur les modalités de commande. Ou, si vous le préférez, écrivez à:

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit, Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
 - nil or zero.
- -- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A 016.

This publication was prepared under the direction of:

- . Barbara J. Slater, Director, Prices Division
- . J. Arthur Ridgeway, Chief, Consumer Prices Section
- Harold Harnarine, Head, Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
 - néant ou zéro.
- -- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A OT6.

Cette publication a été rédigée sous la direction de

- Barbara J. Slater, directeur, Division des prix

FAITS SAILLANTS

Consumer Price Behaviour

Third Quarter, 1988

Trends in the All-items index

Between June and September (third quarter) the Allitems Consumer Price Index (CPI) advanced by 1.2% seasonally adjusted. This was faster than the rise of 0.9% reported for each of the two previous quarters, ending in March and June. The seasonally adjusted monthly rates of change slowed during the third quarter, having risen 0.6% in July, then slowing to 0.4% in August and 0.2% in September.

Unadjusted, the CPI advanced by 1.0% in the third quarter of 1988, compared to increases of 1.1% registered in each of the two previous quarters. The annual rate of increase, as measured by the average of the 12-month changes for the three months in the quarter, was unchanged from the second quarter at 4.0%.

Major Contributors to the Third Quarter Change

As stated before, the CPI advanced by 1.0% unadjusted in the third quarter. The two components, Food and All-items excluding Food, each rose by 1.0% during the quarter.

Over one-half of the latest quarterly increase in the CPI was due to a 1.3% advance in the Housing index. In addition, the Food index, up 1.0%, contributed close to one-fifth of the rise. Another twelve percent of the overall advance was due to an increase of 1.4% in the Recreation, Reading and Education index. The contributions attributable to the movements in each of the other four major component indexes were considerably smaller.

The Housing index, as noted above, rose by 1.3% in the third quarter. The bulk of the rise was due to increases of 2.0% in the Rented Accommodation index and 1.4% in the Owned Accommodation index. The latter index responded to noticeable increases in home maintenance and repair charges, in mortgage interest costs and in the prices of new houses. Hotel/motel accommodation rates also rose by a sharp 7.1%, contributing heavily to the latest change in the Housing index. Some moderate effects originated from higher charges for child care services and increased prices for pet food, detergent and soap, selected furniture and household textiles. The overall rise in the Housing index was moderated to some extent by declines in long-distance telephone charges, mainly in British Columbia, Alberta and New Brunswick.

The increase of 1.0% in the Food index in the third quarter resulted from increases of 0.7% in the Food Purchased from Stores index and 1.5% in the Food Purchased from Restaurants index. Much of the rise in the Food Purchased from Stores index resulted from higher prices for chicken, prepared and ready-cooked meat, fish, dairy products, eggs, sugar and fresh fruit. Some noticeable downward pressure was exerted by lower prices for fresh vegetables, beef and soft drinks.

Another important source of influence on the third quarter rise in the All-items index came from an increase of 1.4% in the Recreation, Reading and Education index. The Recreation index advanced by 1.0%, driven by higher prices for selected recreational equipment and vehicles, photographic goods, cablevision services and motion picture viewing. The Education index advanced by 3.1%, influenced largely by a 4.5% average rise in post-secondary tuition fees which are normally reported in September of each year. The Reading index advanced by 1.5% as well.

Comportement des prix à la consommation

Troisième trimestre de 1988

Tendances de l'indice d'ensemble

De juin à septembre (troisième trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation a augmenté de 1.2%. Cette augmentation est plus accentuée que celle (0.9%) enreqistrée pour les deux trimestres précédents, qui se terminaient respectivement en mars et en juin. Les taux de variation mensuels désaisonnalisés se sont ralentis au cours du troisième trimestre après avoir augmenté de 0.6% en juillet, puis de 0.4% en août et de 0.2% en septembre.

L'indice des prix à la consommation (IPC) non désaisonnalisé s'est accru de 1.0% au troisième trimestre de 1988 comparativement à des augmentations de 1.1% enreqistrées pour les deux trimestres précédents. Le taux de progression annuel, établi à partir de la moyenne des variations sur douze mois pour les trois mois du trimestre, est demeuré inchangé en regard du deuxième trimestre (4.0%).

Principaux facteurs de la variation au deuxième trimestre

Comme on l'a vu plus haut, l'IPC non désaisonnalisé a proqressé de 1.0% au cours du troisième trimestre. L'indice des aliments et l'indice d'ensemble sans les aliments étaient tous deux en hausse de 1.0% durant le trimestre.

Plus de la moitié de l'augmentation de l'IPC au cours du dernier trimestre est attribuable à la hausse de 1.3% de l'indice de l'habitation. En outre, l'indice des aliments, en hausse de 1.0%, représente près d'un cinquième de l'augmentation; 12% de l'augmentation d'ensemble provient de la hausse de 1.4% de l'indice des loisirs, de la lecture et de la formation. Les mouvements observés dans les quatre autres grandes composantes de l'indice ont eu une influence beaucoup moins considérable.

L'indice de l'habitation, comme on l'a mentionné précédemment, s'est accru de 1.3% au troisième trimestre. Cet accroissement s'explique principalement par l'augmentation et 2.0% de l'indice du logement en location et par celle de 1.4% de l'indice du loqement en propriété. Ce dernier indice a réagi aux augmentations sensibles des frais de réparation et d'entretien, des taux d'intérêt hypothécaires et du prix des maisons neuves. Les frais d'hébergement dans les hôtels et motels ont aussi enregistré une forte hausse de 7.1%, ce qui a contribué à la récente variation de l'indice de l'habitation. Parmi les influences de moyenne importance, on retrouve l'accroissement des frais de garde d'enfants et le relèvement des prix des aliments pour les animaux, des détersifs et savons, ainsi que de certains meubles et articles ménagers en matière textile. La orogression globale de l'indice de l'habitation a toutefois été quelque peu modérée par la diminution des frais d'appels interurbains, surtout en Colombie-Britannique, en Alberta et au Nouveau-Brunswick.

La hausse de 1.0% de l'indice des aliments au troisième trimestre est la conséquence de l'augmentation de 0.7% de l'indice des aliments achetés au magasin et de celle de 1.5% de l'indice des aliments achetés au restaurant. En grande partie, la montée de l'indice des aliments achetés au magasin résulte de la majoration des prix du poulet, des viandes cuites et préparées, du poisson, des produits laitiers, des oeufs, du sucre et des fruits frais. On a toutefois observé une pression sensible à la baisse, due au recul du prix des léqumes frais, du boeuf et des boissons gazeuses.

Un autre facteur qui a joué un grand rôle dans l'augmentation de l'indice d'ensemble lors du troisième trimestre est la hausse de 1.4% de l'indice des loisirs, de la lecture et de la formation. L'accroissement de 1.0% de l'indice des loisirs s'explique par les prix plus élevés du matériel et des véhicules de loisirs, du matériel photographique, de la télédistribution et du cinéma. L'indice de la formation s'est accru de 3.1% en raison surtout de la hausse moyenne de 4.5% des frais de scolarité des études post-secondaires, frais qui sont généralement déclarés en septembre de chaque année. L'indice de lecture, quant à lui, a augmenté de 1.5%.

Increases in the remaining four major component indexes made significantly smaller contributions to the latest quarterly change in the CPI. Increases in the Health and Personal Care index (1.2%) and the Clothing index (0.5%) each contributed about five per cent to the CPI rise. In addition, the Transportation index rose by 0.2% and the Tobacco Products and Alcoholic Beverages index climbed by 0.3%, each contributing marginally to the overall rise in the CPI.

Much of the latest rise in the Health and Personal Care index was attributable to higher prices for prescribed and non-prescribed medicines, personal care supplies, dental care services and other personal care services.

The 0.5% rise in the Clothing index was due, in large measure, to increases of 0.6% in the Women's Wear index, 0.5% in the Men's Wear index and 1.2% in the Clothing Services index. Much of the rise was associated with higher prices for women's suits, dresses, skirts, blouses and footwear, as well as for men's suits and footwear. These advances were dampened somewhat by lower prices for women's coats and jackets and men's pants.

The moderate 0.2% rise in the Transportation index was the outcome of noticeable offsetting price movements. Advances were registered mainly for auto insurance premiums, automobile maintenance and repair charges, the rental and leasing of vehicles and prices of new cars. In spite of its sharp month-to-month oscillation, the Air Transportation index increased by a moderate 0.8% in the third quarter. A large part of the upward thrust in the Transportation index was offset by a drop of 2.3% in gasoline prices, as indicative of responses to falling prices of crude petroleum in international markets.

The 0.3% increase in the Tobacco Products and Alcoholic Beverages index resulted from rises of 0.6% in the Tobacco Products index and 0.2% in the Alcoholic Beverages index. The former index was influenced to a large extent by provincial tax increases on cigarettes in Manitoba and British Columbia. The latter index rose, as higher prices for alcoholic beverages served in licensed premises were observed at the same time that prices of imported wines fell.

Les augmentations des quatre autres principales composantes ont eu beaucoup moins d'influence sur la variation de l'IPC au cours du dernier trimestre. Les hausses de l'indice de santé et soins personnels (1.2%) et de l'indice de l'habillement (0.5%) ont toutes deux représenté pour environ 5% de l'accroissement de l'IPC. De plus, l'indice des transports s'est accru de 0.2% et l'indice des produits du tabac et boissons alcoolisées, de 0.3%; ces indices ont toutefois eu une influence minime sur la hausse d'ensemble de l'IPC.

La récente augmentation de l'indice de la santé et des soins personnels est attribuable en majeure partie à la hausse du prix des médicaments, avec ou sans ordonnance, des articles de soins personnels, des soins dentaires et autres services de soins personnels.

La progression de 0.5% de l'indice de l'habillement est due, dans une large mesure, aux hausses de 0.6% de l'indice des vêtements pour femmes, de 0.5% de l'indice des vêtements pour hommes et de 1.2% de l'indice des services vestimentaires. Les prix plus élevés des tailleurs, des robes, jupes, chemises et chaussures pour femmes ainsi que les prix accrus des complets et chaussures pour hommes sont principalement responsables de cette progression. Ces hausses ont toutefois été quelque peu atténuées par la diminution du prix des manteaux pour femmes et des vestes et pantalons pour hommes.

La faible hausse de 0.2% de l'indice des transports est le résultat de mouvements de prix importants mais de sens opposé. Les augmentations touchent principalement les primes d'assurance-automobile, les réparations et l'entretien des voitures, la location de véhicules et le prix des voitures neuves. Malgré une forte oscillation d'un mois à l'autre, l'indice du transport aérien n'a augmenté que de 0.8% au troisième trimestre. La poussée de l'indice des transports a été contrebalancée par un recul de 2.3% du prix de l'essence, luimême attribuable à la diminution du prix du pétrole brut sur les marchés internationaux.

L'accroissement de 0.3% de l'indice des produits du tabac et boissons alcoolisées résulte des augmentations de 0.6% de l'indice des produits du tabac et de 0.2% de l'indice des boissons alcoolisées. Le premier indice traduit dans une larqe mesure la hausse des taxes provinciales sur les ciqarettes au Manitoba et en Colombie-Britannique. L'augmentation du deuxième s'explique par la hausse du prix des boissons alcoolisées servies dans les débits de boisson malgré la diminution du prix des vins importés.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n° 62-001 au cataloque.

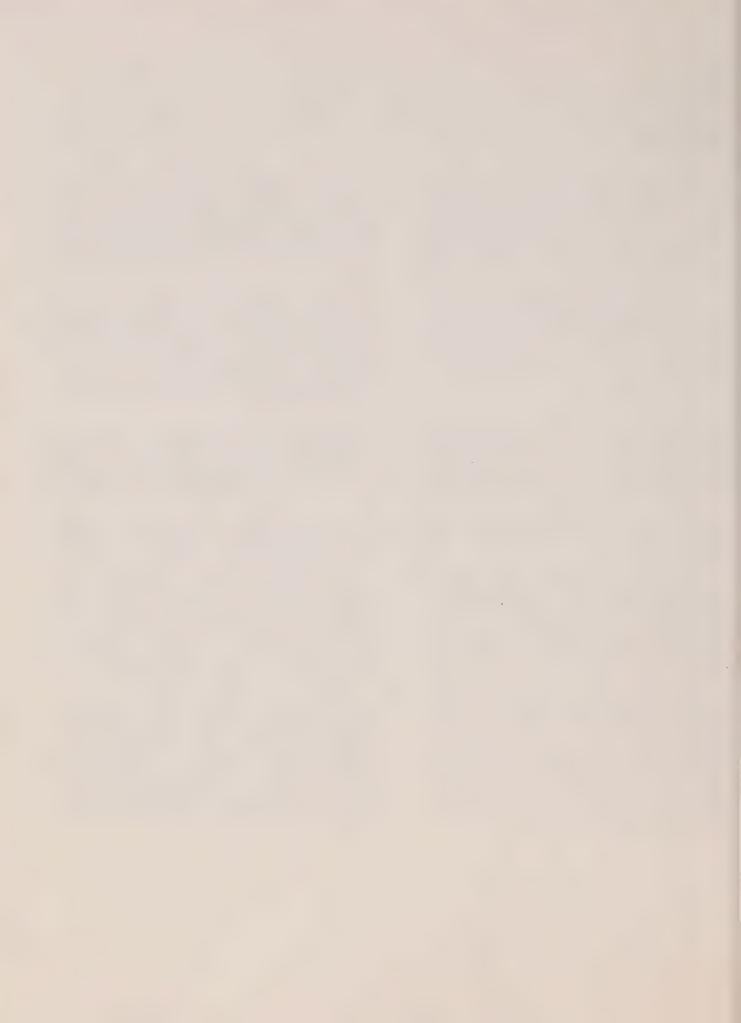

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

⁽¹⁾ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principale de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble es aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiés sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.
 Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.
 Whitehorse n'est pas inclus dans les moyennes pondérées des villes.
 Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeg, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.
 Chicoutimi (450 g).

A NOTE ON CONSUMER PRICE INDEXES FOR PROVINCIAL URBAN CENTRES

A Provincial CPI

Beginning with the present issue of this publication, Statistics Canada is publishing consumer price indexes for the ten provinces of Canada. Users have requested price indexes on a provincial basis that could be used in conjunction with other important economic and social measures available by province. These provincial CPIs do not fully meet this demand, since they are not representative of all parts of the provinces. However, for the majority of the provinces, these data will be more representative of provincial price movements than the individual city CPIs, or the combined published city CPIs. Thus, they should provide a valuable addition to the national and city CPIs already published.

The data used in the construction of the CPI for Canada relates to cities with 30,000 or more popula-This implies that the expenditure patterns and tion. the price change experiences of consumers living outside these defined cities are not directly reflected in the CPI. For this reason, the provincial CPIs cannot be regarded as price indexes representative of the whole province. However, for some purposes the published provincial CPIs may be reasonable approximations of the true provincial CPIs. The extent to which they could successfully play this role depends largely on whether such indexes are deemed to represent the price change experiences of communities within a province that are not expressly covered by such indexes. In provinces where consumer markets function efficiently and productive resources (particularly labour) are mobile, prices might be expected to respond rapidly to changes in market conditions. Under such conditions, the provincial CPIs may reflect reasonably well the overall experience of the province, including price changes in non-covered communities.

The provincial CPIs may serve as good tools for users who would prefer a regional measure rather than the Canada CPI, but find the city CPIs too narrowly based for their purposes. For provinces which have more than one published city CPI, some users have chosen to combine the published city CPIs to form their own "provincial" index. These new indexes provide for even greater coverage by also using some unpublished data in most provinces.

An example of where a provincial index might have been employed, had it been published, comes from a recent labour negotiation in Nova Scotia. In the contract between the government of Nova Scotia and the Canadian Union of Public Employees, a COLA clause was instituted with specific reference to the CPI for Halifax (see Collective Bargaining Review, March 1988, Labour Canada). Since it appears that the parties to this contract preferred a price index that would reflect measured price changes in the local economy over the Canadian CPI, a provincial measure, had it been available at that time, might have been a viable alternative to the Halifax index.

Proportion of Families living in CPI Cities

The Canadian CPI is based on the spending patterns of urban consumers living in cities of 30,000 or more population and the prices faced by these consumers. The proportion of families and unattached individuals in each province who live in cities which meet these criteria depends on the distribution of population in a given province. This proportion is greater where the population tends to be highly concentrated and smaller where urban centres tend to be less than 30,000 in \$176.

COMMENTAIRE SUR LES INDICES DE PRIX À LA CONSOMMATION POUR LES CENTRES URBAINS PROVINCIAUX

Un IPC provincial

A compter du présent numéro, Statistique Canada publiera des indices de prix à la consommation pour les dix provinces du Canada. Les utilisateurs avaient réclamé des indices de prix provinciaux pour les utiliser avec d'autres mesures économiques et sociales importantes disponibles par province. Ces IPC provinciaux ne répondent pas tout à fait aux attentes des utilisateurs puisqu'ils ne sont pas représentatifs de toutes les régions des provinces. Toutefois, pour la plupart des provinciaux que les IPC de chaque ville considérés individuellement ou en combinaison. Ils devraient donc être une addition valable aux IPC déjà publiés pour le Canada et pour les villes.

Les données servant à la construction de l'IPC pour le Canada se rapportent aux villes de 30,000 habitants ou plus. Cela signifie que l'IPC ne traduit pas directement la variation des prix ni les habitudes de dépense des consommateurs à l'extérieur de ces villes. C'est pourquoi les IPC provinciaux ne peuvent être considérés comme des indices représentatifs de chaque province dans son ensemble. Toutefois, pour certaines applications, les IPC provinciaux publiés se rapprochent raisonnablement de ce que seraient de véritables IPC provinciaux et peuvent être utilisés à leur place, dans la mesure où l'on juge qu'ils représentent le mouvement des prix dans des agglomérations qui ne sont pas expressément visées par eux. Dans les provinces où les marchés de consommation fonctionnent efficacement et où les ressources productives (en particulier la main-d'oeuvre) sont mobiles, les prix devraient normalement répondre rapidement aux changements dans les conditions du marché. Dans de telles conditions, les IPC provinciaux peuvent refléter assez bien la situation globale dans la province, y compris les changements de prix dans les agglomérations non visées.

Les IPC provinciaux peuvent bien servir les utilisateurs qui veulent utiliser une mesure régionale plutôt que l'IPC du Canada mais qui trouvent que les IPC des villes ne répondent pas à leurs besoins à cause de l'étroitesse de leur base. Dans les provinces où plus d'un IPC de ville est publié, certains utilisateurs ont voulu améliorer la couverture en combinant les IPC publiés des villes pour former leur propre indice "provincial". Les nouveaux indices offrent une couverture encore meilleure puisqu'ils incorporent, pour la plupart des provinces, certaines données non publiées.

Une négociation collective menée récemment en Nouvelle-Écosse peut servir d'exemple pour illustrer à quoi aurait pu servir un indice provincial s'il avait été publié. La convention entre le gouvernement de la Nouvelle-Écosse et le Syndicat canadien de la Fonction publique comportait une clause d'indexation rattachée explicitement à l'IPC d'Halifax (voir Revue de la négociation collective, mars 1988, Travail Canada). Puisque les parties contractantes souhaitaient semble-t-il utiliser un indice de prix mesurant les variations dans l'économie locale de préférence à l'IPC du Canada, elles auraient fort bien pu choisir une mesure provinciale, si une telle mesure avait été disponible, plutôt que l'indice d'Halifax.

$\frac{\text{Proportion des familles vivant dans les villes visées par un}}{\text{IPC}}$

L'IPC du Canada est fondé sur les habitudes de dépense des consommateurs vivant dans des villes de 30,000 habitans ou plus et sur les prix que doivent payer ces consommateurs. La proportion de familles et de personnes seules dans chaque province habitant ces villes varie d'une province à l'autre selon la répartition de la population. Cette proportion est plus élevée là où la population est fortement concentrée, et plus faible là où les centres urbains comptent souvent moins de 30,000 habitants.

Approximately 67% of all families and unattached individuals in Canada live in cities surveyed for the CPI (see Text Table II). This proportion varies significantly across provinces. In Ontario, Québec and British Columbia, the proportions are above the national average. The remaining provinces have proportions below the national average, with Alberta and Manitoba only slightly below, while in the Atlantic provinces and Saskatchewan the proportions are well below the national average.

Canada.

Environ 67% de l'ensemble des familles et des personnes seules au Canada vivent dans les villes prises en compte par l'IPC (voir tableau explicatif II). Cette proportion varie considérablement d'une province à l'autre. En Ontario, au Québec et en Colombie-Britannique, les proportions dépassent la moyenne nationale. Dans les autres provinces, elles sont inférieures à la moyenne nationale, à peine en Alberta et au Manitoba et nettement dans les provinces de l'Atlantique et en Saskatchewan.

Importance of non-published urban centres in the provincial CPIs

Statistics Canada publishes CPIs for 16 cities selected from within the ten provinces, with at least one of these cities in each province. The remaining urban centres for which indexes are not published, are grouped into strata? by city size and location. In Alberta, for example, CPIs are published for Edmonton and Calgary (each treated as an independent stratum), while Lethbridge, Medicine Hat, Red Deer and Fort McMurray are grouped as single stratum. The weights of the provincial CPI for Alberta will therefore be the sum of the weights for the three strata.

The provincial CPIs are an enhancement over the cities CPIs in terms of their expenditure coverage. The extent to which this occurs is apparent from Text Table III. In rank order, the provinces of New Brunswick, Ontario, Nova Scotia and Québec have gained most from the inclusion of the unpublished urban centre strata in their provincial CPIs. Noticeable gains are also apparent in the cases of Saskatchewan and British Columbia. The increase in the cases of Newfoundland, Alberta and Manitoba are not as large, while the index for Prince Edward Island is the same as that for Charlottetown/Summerside, since all the existing information for that province relates to the index for the cities of Charlottetown/Summerside.

Importance des centres urbains non publiés dans les IPC provinciaux

Statistique Canada publie des IPC pour 16 villes réparties dans les dix provinces, avec au moins une ville dans chaque province¹. Les autres centres urbains pour lesquels aucun indice n'est publié sont groupés en strate² selon leur taille et leur emplacement. En Alberta, par exemple, des IPC paraissent pour Edmonton et Calgary (qui représentent chacune une strate distincte), alors que les villes de Lethbridge, Medicine Hat, Red Deer et Fort McMurray sont groupées en une seule strate. Les pondérations de l'IPC provincial pour l'Alberta seront donc la somme des poids pour les trois strates.

Les IPC provinciaux représentent une amélioration par rapport aux IPC des villes sur le plan de la couverture des dépenses. Le degré de l'amélioration est mise en évidence par le tableau explicatif III. Les provinces qui ont le plus gagné de l'inclusion de leurs strates de centres urbains non publiées dans leurs IPC provinciaux sont, dans l'ordre, le Nouveau-Brunswick, l'Ontario, la Nouvelle-Écosse et le Québec. Des gains non négligeables s'observent aussi pour la Saskatchewan et la Colombie-Britannique. L'amélioration est de moindre importance dans le cas de Terre-Neuve, de l'Alberta et du Manitoba, alors que la couverture de l'indice de l'Île-du-Prince-Édouard est la même que celle de l'indice de Charlottetown/Summerside puisque tous les renseignements disponibles pour cette province étaient déjà incorporés à l'indice de ces deux villes.

¹ City CPIs are also published for Whitehorse and Yellowknife.

See Appendix II, The Consumer Price Index Reference Paper, updating based on 1982 Expenditures, Catalogue 62-553, Statistics Canada.

¹ Des IPC de ville sont aussi publiés pour Whitehorse et Yellowknife.

Voir appendice II, Document de référence de l'indice des prix à la consommation, Mise à jour fondée sur les dépenses de 1982, nº 62-553 au cataloque, Statistique Canada.

Expenditure Weights in the Provincial CPIs

The "weights" used in the compilation of the CPI at present relate to consumer expenditure patterns in 1982. Distinct expenditure patterns are separately estimated for each urban centre stratum. The total expenditure on each commodity for all strata in a province are summed to derive the provincial expenditure pattern. Text Table IV presents these expenditure patterns as proportions of the total basket expenditure for each province.

Pondérations des dépenses dans les IPC provinciaux

Les "pondérations" actuellement utilisées dans le calcul de l'IPC reposent sur les habitudes de dépense des consommateurs en 1982 et sont estimées pour chaque strate de centres urbains. Les dépenses totales consacrées à chaque produit pour l'ensemble des strates d'une province sont additionnées ce qui permet de déduire la composition des dépenses dans cette province. Le tableau explicatif IV présente ces habitudes de dépense en pourcentage de la dépense pour l'ensemble du panier pour chaque province.

TEXT TABLE IV. Expenditure Weights $(P_{,82}\times Q_{,82})$ by Major Component, Provinces and Canada.

Annual Changes in the All-items Indexes Across Provinces

Changes calculated from the annual average index levels of the All-items indexes by provinces are shown in Text Table V. Annual movements in the All-items indexes for Canada are also shown for comparison.

Price changes by year from 1980 to 1987 may be viewed as belonging to the most recent inflation cycle. In this cycle, 1981 was a high point for Canada and all the provinces. In that year, Canada registered a CPI advance of 12.5%, with increases in the All-items indexes of the provinces ranging from 11.2% in Manitoba to 14.3% in British Columbia. After that, the Allitems indexes slowed down quite noticeably. The decelerating process for two provinces continued right up to 1987, the latest complete year for which information is available.

In the case of Canada, the annual rate of change declined steadily from 1981 to 1985, then increased slightly in the latest two years. Only the Ontario CPI coincided with this timing. In Québec, Manitoba and Alberta, the lowest rates of increase were reported in 1984. In Prince Edward Island, Nova Scotia and Saskatchewan, minimum increases were posted in 1986. For Newfoundland and New Brunswick, the decelerating process was evident right up to 1987.

Since 1981, British Columbia and Prince Edward Island have had annual rates of increase below the national average in every year, while Alberta has had lower than average rates since 1983. Ontario, on the other hand, has had annual rates of increase greater than the national average in each year since 1983.

Variations annuelles dans les indices d'ensemble d'une province à l'autre

Les variations calculées d'après les niveaux annuels moyens des indices d'ensemble par province se retrouvent au tableau explicatif V. Les mouvements annuels des indices d'ensemble pour le Canada y figurent aussi à des fins de comparaison.

On peut considérer que les variations annuelles des prix de 1980 à 1987 sont celles du dernier cycle d'inflation. À l'intérieur de ce cycle, 1981 marque un sommet pour le Canada et pour toutes les provinces. Cette année-là, l'IPC pour le Canada a progressé de 12.5% et les indices d'ensemble des provinces ont affiché des hausses comprises entre 11.2% au Manitoba et 14.3% en Colombie-Britannique. Par la suite, la progression des indices d'ensemble s'est passablement ralentie. La décélération s'est poursuivie dans deux provinces jusqu'en 1987, dernière année complète pour laquelle des renseignements sont disponibles.

Dans le cas du Canada, le taux annuel de variation a constamment diminué de 1981 à 1985, puis a légèrement augmenté au cours des deux années suivantes. Seul l'IPC de l'Ontario a fait de même. Au Québec, au Manitoba et en Alberta, les plus faibles taux d'augmentation ont été signalés en 1984. À l'Île-du-Prince-Édouard, en Nouvelle-Écosse et en Saskatchewan, les hausses minimales ont été observées en 1986. Pour Terre-Neuve et le Nouveau-Brunswick, le processus de décélération s'est maintenu jusqu'en 1987.

Des taux annuels d'augmentation inférieurs à la moyenne nationale ont été affichés chaque année par la Colombie-Britannique et l'Île-du-Prince-Édouard depuis 1981, et par l'Alberta depuis 1983. En revanche, l'Ontario connaît chaque année depuis 1983 des taux annuels d'accroissement supérieurs à la moyenne nationale.

Availability of Provincial CPIs

The official start date of these series is September 1978, the date when the 1974 "weights" were introduced. With the introduction of the 1974 basket in September 1978, several significant methodological changes were introduced. For this reason, no attempt has been made to produce provincial data prior to this time. Due to space limitations, the data available in this publication are limited to the All-items CPI and its seven major components for each province from January 1985.

Additional indexes at lower levels of detail and for months back to September 1978 can be obtained for a fee from the Information and Current Analysis Unit, (613) 951-9606, Prices Division.

Disponibilité des IPC provinciaux

Ces séries débutent officiellement en septembre 1978, date de l'introduction des "pondérations" de 1974. Avec l'introduction du panier de 1974 en septembre 1978, plusieurs changements méthodologiques importants ont été adoptés. Pour cette raison, on n'a pas cherché à produire de données provinciales antérieures à cette date. Faute d'espace, les données publiées ici se limitent à l'IPC d'ensemble et à ses sept composantes principales pour chaque province à partir de janvier 1985.

Des indices mensuels additionnels à des niveaux de détail inférieurs remontant jusqu'en septembre 1978 peuvent être achetés auprès de la Sous-section de l'information de la Division des prix (613-951-9606).

For example, the proportion of the target population covered by the CPI was enhanced considerably in September 1978, when the definition of family size and incomes of families was dropped.

Par exemple, la proportion de la population cible visée par l'IPC a été élargie considérablement en septembre 1978 avec l'abandon de la définition de la taille de la famille et des revenus des familles.

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the movement of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1984 to January 1985 price change, the weights used in the Consumer Price Index are those pertaining to 1982 expenditure patterns. Data used for establishing these patterns were obtained through the 1982 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1982 revealed 81 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 81 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le mouvement des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

A compter de janvier 1985, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1982. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1982. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1982, 81 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 81 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 70% of the total 1982 current consumption expenditures reported in the 81 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 63 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods. Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1982 par les 81 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 63 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réquliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve sont utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1978 family expenditure patterns were used to compile the CPI from April 1982 to December 1984. In January 1985 the 1978 weights were replaced by those derived from the expenditure patterns of 1982. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1978 a servi au calcul de l'IPC à partir d'avril 1982 jusqu'à décembre 1984. En janvier 1985, les pondérations de 1978 ont été remplacées par d'autres dérivées de la composition des dépenses de 1982. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE VI. Comparison of 1978 and 1982 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF VI. Comparaison des pondérations des dépenses de 1978 et de 1982 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1978	Weights 1982
Composantes principales	Pondérations 1978	Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments	21.11	20.02
Housing - Habitation	35.37	38.14
Clothing - Habillement	9.55	8.37
Transportation - Transports	16.26	15.75
Health and personal care - Santé et soins personnels	3.71	4.02
Recreation, reading and education - Loisirs, lecture et formation	8.61	8.25
Tobacco products and alcoholic beverages – Produits du tabac et boissons alcoolisées	5.39	5.45

⁽¹⁾ Figures may not add up due to rounding.

The weights shown in Text Table VI represent expenditures in 1978 (1978 quantities valued in 1978 prices) and in 1982 (1982 quantities valued in 1982 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario, K1A OT6 (Telephone: (613) 951-9606).

The indexes based on 1982 weights were linked or connected in December 1984 to the appropriate indexes based on 1978 weights which had been in use since April 1982.

Les pondérations du tableau explicatif VI représentent les dépenses en 1978 (quantités et prix de 1978) et en 1982 (quantités et prix de 1982). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation Division des prix, Statistique Canada Ottawa (Ontario) K1A OT6 (Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1982 ont été enchaînés ou raccordés en décembre 1984 aux indices correspondants fondés sur les pondérations de 1978, en usage depuis avril 1982.

⁽¹⁾ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", Retail Prices and Living Costs - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. For further details see The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures, Catalogue 62-553 (Occasional).

Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", Prix de détail et coût de la vie-Bulletin de service (n^0 62-005 au catalogue), vol. 4, n^0 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. Pour plus de renseignements, voir le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, nº 62-553 au catalogue (hors-série).

Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en

1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres were not included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres are included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommoda-As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in The Consumer Price Index, Reference Paper, Updating Based on 1982 Expenditures, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in two volumes: Family Food Expenditure, 1982, Catalogue 62-554; and Family Expenditure in Canada, 1982, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the Consumer Price Index, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A OT6 (613-951-9606 or 613-951-9607).

se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres Étant donné que la composition des urbains. dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains n'étaient pas compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres sont maintenant pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est Les données sur les loyers utilisées calculé. sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, (hors-série), nº 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans deux volumes distincts: Dépenses alimentaires des familles au Canada, 1982, nº 62-554 au catalogue; et Dépenses des familles au Canada, 1982, nº 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel L'indice des prix à la consommation, nº 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-9607).

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 (100 cents X $\frac{100.0}{114.6}$ = 87.3 cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

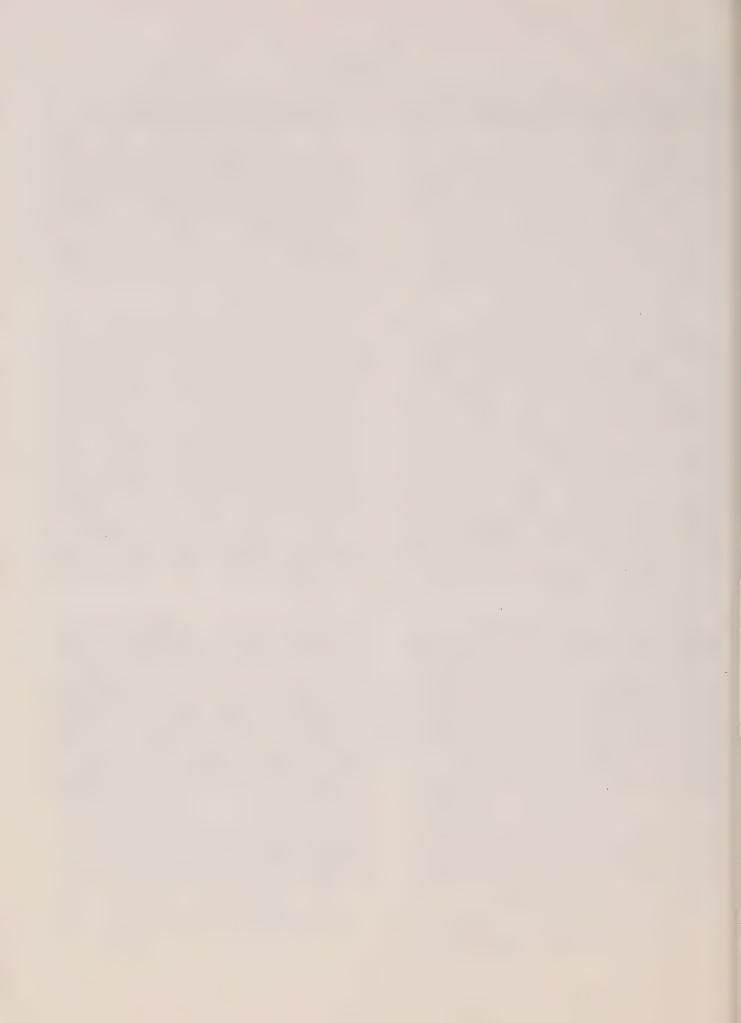

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983. les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents (100 cents X $\frac{100.0}{114.6}$ = 87.3 cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.g., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activitié économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la quessubject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket, the seasonal adjustment methodology was changed. Direct seasonal adjustment is now performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjust-Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. The difficulty arises with the most recent (1982) basket as we only have three years of data based on this basket. The length of this series is due to the accelerated introduction of the 1982 basket. To create a longer time series, we have chained backwards from 1982 to 1978 unlinked data from the 1978 basket. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

The seasonally adjusted price movements published in our publications are based on the series using the 1982 basket chained back to 1978. These data are based on indexes with a time base of 1982 = 100 and are not consistent with the published raw data prior to January 1985.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est maintenant effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avantages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec laquelle on met maintenant à jour le panier de l'IPC. Cette difficulté se pose à l'égard du dernier panier (1982), car nous ne disposons que de trois années de données s'y rapportant. durée de cette série s'explique par l'introduction accélérée du panier de 1982. Dans le but de créer une série plus longue, nous avons enchaîné rétrospectivement, de 1982 à 1978, les données non enchaînées du panier de 1978. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distortions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Les mouvements désaisonnalisés des prix qui paraissent dans nos publications se fondent sur les séries qui utilisent le panier de 1982 enchaîné rétrospectivement jusqu'à 1978. Ces données s'appuient sur les indices dont la période de base est 1982 = 100, et elles ne sont pas conformes aux données brutes publiées avant janvier 1985.

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 These cities are: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 16 through 21 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 22 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 22 are confined to 16 urban centres and for the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 16 à 21 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 22 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centre urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 22 se limitent à 16 centres urbains, pour la période allant de janvier 1986 jusqu'au dernier mois disponible. données se rapportant aux précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

CANADIAN INTER-CITY RETAIL PRICE COMPARISONS

Table 23 shows consumer price differentials prevailing amongst 11 Canadian cities situated in all 10 provinces for a selection of commodities and services at the specified point in time.

The data base of this place-to-place study of comparative retail prices was largely drawn from the large volume of price quotations collected for the production of the monthly city consumer price indexes. For the inter-city food price differentials, however, use was also made of data gathered in a special program of pricing undertaken quarterly for publication of City Average Retail Prices.(1)

In developing these spatial price relationships, efforts were made to achieve comparability by seeking to equate qualities of goods and services in the various locations and by matching types of retail outlets so far as possible. To optimize price comparability between locations, differential price measurements were initially derived separately as between the following pairs of cities:

St. John's - Halifax Charlottetown - Halifax Saint John - Halifax Ottawa - Halifax - Montréal Toronto Ottawa - Toronto - Winnipeq Toronto - Winnipea Regina Edmonton - Winnipeq - Vancouver Edmonton

Within each city pair, price quotations were matched at the item level on the basis of identical specifications, including brand names whenever possible and also with some regard for comparability of retail outlets and merchandising practises. By means of a linking procedure, the paired city item indexes were initially compared with their counterparts in a common base city; subsequently they were related to the weighted average of the combined 11 cities equalling 100. The city-to-city price relationships for individual items thus derived were then aggregated by application of the combined 11-city CPI weighting patterns updated for

COMPARAISONS ENTRE LES PRIX DE DÉTAIL DANS DIFFÉ-RENTES VILLES DU CANADA

Le tableau 23 présente les différences de prix à la consommation de 11 villes du Canada, situées dans les 10 provinces, pour un nombre choisi de biens et de services, pour la période de temps spécifiée.

Les données de cette étude comparative de prix de détail proviennent en grande partie du relevé de prix utilisé pour la production de l'indice mensuel des prix à la consommation. On a, toutefois, utilisé les données obtenues dans le cadre d'un programme trimestriel spécial de relevé des prix servant à la publication des prix de détail moyens par ville(1) pour déterminer les différences de prix de la nourriture entre les villes.

Des efforts ont été entrepris pour développer des comparaisons valables en cherchant à obtenir des qualités identiques de biens et de services dans les différents endroits et en couplant, lorsque possible, des points de vente au détail comparables, pour déterminer les relations de prix spatiales. Afin d'optimiser la comparaison des prix entre les différents endroits, les mesures différentielles de prix ont été calculées séparément pour les paires de villes suivantes:

St. John's - Halifax Charlottetown - Halifax Saint John - Halifax Ottawa - Halifax Toronto - Montréal - Toronto Ottawa Toronto - Winnipeg Regina - Winnipea Edmonton - Winnipeg - Vancouver Edmonton

À l'intérieur de chaque paire de villes, les prix ont été couplés au niveau de l'article en s'assurant que les spécifications étaient identiques, y compris les marques, lorsque c'était possible et aussi en tenant compte de la comparaison des points de vente au détail et des méthodes de vente. Grâce à la procédure de couplage, les indices couplés des villes ont d'abord été comparés au niveau de l'article et transformés sur la base d'une ville commune, ils ont ensuite été reliés à une moyenne pondérée (la combinaison de 11 villes étant égale à 100). Les relations entre les prix d'articles entre les villes ainsi déduites ont été regroupées en applicant le schéma de pondération de l'IPC des 11 villes combinées, mis à jour

⁽¹⁾ See Table 15 and Appendix 4.

⁽¹⁾ Voir tableau 15 et appendice 4.

price change to the time of the inter-city retail price comparison study. Measurements of inter-city retail price differentials are updated, as required, by application of the relative movement of item prices in each city, obtained from the relevant city CPI.

It should be noted, especially in periods of volatile price movement, that city-tocity retail price relationships may be significantly affected by the timing and the relative rate of price change occuring in each location. Furthermore, since the retail prices used in this study are those faced by consumers, they include sales and excise taxes as applicable. Thus, comparative rates of provincial sales tax in effect in the various cities at the time of price comparison, as well as changes in the rate of incidence of such taxes, can be of importance in explaining inter-city price differentials for tax-affected items or groups of items.

Footnotes for Table 23

- (2) The weights shown are rounded 1982 weights as contained in the report The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures (Occasional), Catalogue 62-553. They are provided for illustration only; the weights actually used are combined cities weights with adjustments for price change since 1982.
- (3) Includes the following sub-groups: Condiments, spices and vinegar, sugar and sugar preparations, coffee and tea, fats and oils and other foods, food preparation materials and food preparations.

par la variation de prix qui s'est effectuée jusqu'au moment de l'étude comparative des prix de détail entre les villes. Les mesures de comparaison des prix de détail entre villes sont mises à jour, lorsque nécessaire, en utilisant le mouvement des prix obtenu des IPC de chaque ville, au niveau de l'article.

Il convient de noter, surtout dans une période de fluctuation des prix, que les relations entre les prix de détail d'une ville à l'autre peuvent varier de façon significative selon la période de relevé des prix et le taux relatif de variation des prix à chaque endroit. De plus, puisque les prix de détail utilisés pour cette étude sont ceux que les consommateurs doivent payer, les taxes de vente et d'accise y sont incluses. Donc, les taux comparatifs des taxes de vente provinciale effectives dans les diverses villes au temps de la comparaison, de même que le changement dans le taux ou l'incidence de ces taxes, peuvent être importantes pour expliquer les différences de prix entre les villes, des articles ou groupes d'articles taxables.

Notes pour le tableau 23

- (2) Les poids indiqués sont les poids arrondis pour 1982 figurant dans Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982 (hors-série), nº 62-553 au catalogue. Ils ne sont présentés qu'à titre documentaire; les poids utilisés en fait sont les poids des villes combinés rajustés en fonction des variations des prix observées depuis 1982.
- (3) Comprend les sous-groupes suivants: Condiments, épices et vinaigre, sucre et préparations à base de sucre, le café et le thé, les huiles et matières grasses et les autres aliments, ingrédients et préparations alimentaires.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transporation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger; en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créé. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique

items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcooliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'agit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente une sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.

What does the average family do with \$30,000?

In 1984 the average family in Canada had a disposable income of \$30,000. Income after Tax, Distribution by Size in Canada, 1984 classi-

fies the after-tax income of Canadian families and indivi-

duals. Income data are given by size of income, region, source of income, family size, number of children, age and sex of the family head, and other characteristics.

Use this report to examine how different policies might affect different socio-economic groups. Study problems of the poor and elderly. Get an accurate reading of the purchasing power of Canadians.

Catalogue #13-210 \$20.00 in Canada \$21.00 other countries 87 pages.

Que fait une famille type avec \$30,000?

En 1984, le revenu disponible d'une famille canadienne type était de

\$30,000. La publication Revenu après impôt, répartition selon la taille du revenu au Canada, 1984 indiaue le revenu après impôt des familles et des particuliers canadiens. Les données sur le revenu sont présentées selon la taille du revenu, la région, la source de revenu, la taille de la famille, le nombre d'enfants, l'âge et le sexe du soutien de famille et d'autres caractéristiques.

Ce rapport permet de déterminer l'incidence que peuvent avoir différentes politiques sur divers groupes socio-économiques. Il permet aussi d'étudier les problèmes que rencontrent les personnes pauvres et les personnes âgées et d'obtenir des données précises sur le pouvoir d'achat des Canadiens.

The numbers that make decisions

The data that highlight national economic trends

Infomat is a digest of the most important statistics of the week. It is invaluable for business planners, policy makers and members of the media who take an interest in the Canadian economy.

Articles cite the most recent economic and social data available, describe current trends and point out significant changes. Regular features include a complete list of publications released by Statistics Canada during the reference week, a table of key economic indicators and a list of upcoming data releases. The text is concise, easyto-read and complemented by tables and charts.

Infomat, Catalogue No. 11-002E (weekly), is available for \$2.00 per copy/\$100.00 annually (in Canada); \$3.00 per copy/\$150.00 annually (elsewhere),

loutes les semaines

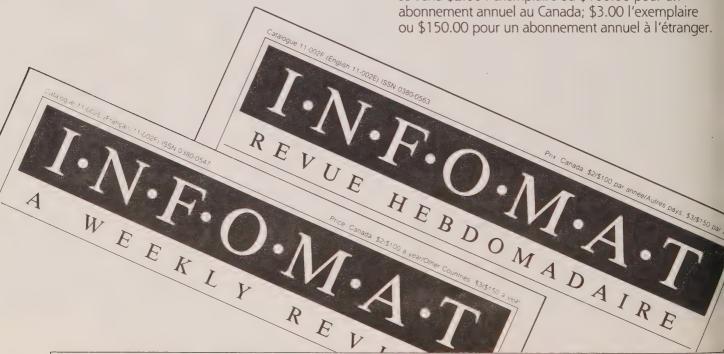

Les chiffres qui font les décisions

Les données illustrant les tendances de l'économie canadienne

Infomat est un résumé des statistiques les plus importante de la semaine. C'est un outil d'une valeur inestimable po les planificateurs du monde des affaires, les responsables de l'élaboration des politiques et les médias d'informatio s'intéressant à l'économie canadienne.

Les articles contenus dans ce bulletin citent les plus récentes données économiques et sociales disponibles, décrivent les tendances actuelles et soulignent les change ments les plus significatifs. On y retrouve des chroniques régulières, notamment une liste complète des nouvelles publications parues à Statistique Canada au cours de la semaine de référence, un tableau des principaux indicateurs économiques, ainsi qu'une liste des données à para tre. Le texte est concis, facile à lire et illustré de tableaux e de graphiques.

Infomat, n° 11-002F au catalogue (hebdomadaire), se vend \$2.00 l'exemplaire ou \$100.00 pour un

Data in Many Forms...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer printouts, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Information and Current Analysis Unit, Prices Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9606) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)

Des données sous plusieurs formes...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
 - nil or zero.
- -- amount too small to be expressed.
- P preliminary figures.
- r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE ON CANSIM

Most of the data published in this publication is also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. The Databank identification numbers, by which data may be retrieved from CANSIM, are given in the headings of the relevant series in Tables in the publication. For further information on CANSIM call (613) 951-8200 or write Electronic Data Dissemination Division, Statistics Canada, R.H. Coats Building, Ottawa, K1A OT6.

This publication was prepared under the direction of:

- Barbara J. Slater, Director, Prices Division
- . J. Arthur Ridgeway, Chief, Consumer Prices Section
- Harold Harnarine, Head, Information and Current Analysis Unit

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistics Canada:

- .. nombres indisponibles.
- ... n'ayant pas lieu de figurer.
 - néant ou zéro.
- -- nombres infimes.
- P nombres provisoires.
- r nombres rectifiés.
- x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

NOTE CONCERNANT CANSIM

La plupart des données publiées dans cette publication peuvent être obtenues sous forme lisible par machine de CANSIM (Système canadien d'information socio-économique). Les séries historiques sont généralement plus longues dans CANSIM. Les numéros d'identification de la Databank qui servent à retrouver les données de CANSIM sont inscrits à l'en-tête des séries respectives de la publication. Pour plus d'information sur CANSIM, signaler (613) 951-8200 ou écrire à, Division de la diffusion informatique des données, Statistique Canada, Immeuble R.H. Coats, Ottawa, K1A 016.

Cette publication a été rédigée sous la direction de:

- . Barbara J. Slater, directeur, Division des prix
- . J. Arthur Ridgeway, chef Section des prix à la consommation

HIGHLIGHTS

Consumer Price Behaviour

Fourth Quarter, 1988

Trends in the All-items Index

Between September and December 1988 (fourth quarter) the All-items Consumer Price Index (CPI) rose by 1.0% seasonally adjusted. This was slightly slower than the 1.2% increase observed in the previous quarter. The seasonally-adjusted monthly rates rose at a steady 0.3% in each of the three months of the fourth quarter.

In unadjusted terms, the CPI rose by 0.8% in the fourth quarter compared to a rise of 1.0% reported in the third quarter. The annual rate of increase as measured by the average of 12-month changes for the three months of the fourth quarter was 4.1%, marginally higher than the 4.0% rise noted in the previous quarter.

Major Contributors to the Fourth Quarter Change

As indicated above, the All-items index rose by 0.8% unadjusted between September and December (fourth quarter) of 1988. The latest advance was largely the outcome of a rise of 1.2% in the All-items excluding Food index, the impact of which was partially offset by a fall of 0.7% in the Food index.

With the exception of the decline in the Food index, all the remaining six major component indexes registered increases ranging from 0.2% to 1.4%. The largest part of the latest rise in the CPI was due to an increase of 1.4% in the Housing index. Advances of 1.1% in the Iransportation index and 1.2% in the Recreation, Reading and Education index each also made a major contribution to the latest overall change. Next in rank order of importance was a rise of 1.0% in the Tobacco Products and Alcoholic Beverages index.

Much of the latest rise in the Housing index was due to a 2.5% increase in the Owned Accommodation index of which approximately one-half was the result of a 5.6% increase in property taxes, which enter the CPI each October. The Owned Accommodation index was also influenced by a substantial 1.6% rise in mortgage interest cost and a 2.2% advance in the prices of new houses. The latest rise in the Housing index was also affected noticeably by a rise of 1.2% in rents. Other notable advances were reported for prices of selected household furnishings and equipment and some components (telephone charges, child care services, pet food and paper products) of household operation. Traveller accommodation charges fell by 4.1%, as seasonal winter rates came into effect.

The 1.1% rise in the Transportation index resulted from an increase of 1.6% in the Private Transportation sub-component, dampened in part by a fall of 2.1% in the Public Transportation index. Within the Private Transportation group, the dominant pressure came from an average 5.8% increase in the price of new 1989 model cars, compared to their 1988 counterparts after adjustments were made to take account of quality differences. Increases in selected vehicle maintenance and repair charges, as well as in automobile insurance premiums were also observed.

FAITS SAILLANTS

Comportement des prix à la consommation

Quatrième trimestre, 1988

Tendances de l'indice d'ensemble

Entre septembre et décembre 1988 (quatrième trimestre), l'indice d'ensemble désaisonnalisé des prix à la consommation a augmenté de 1.0%. Cette augmentation est légèrement inférieure à celle de 1.2% observée au cours du trimestre précédent. Les taux de variation mensuels désaisonnalisés ont augmenté à un taux régulier de 0.3% durant chacun des trois mois de ce quatrième trimestre.

L'indice des prix à la consommation (IPC) non désaisonnalisé s'est accru de 0.8% au quatrième trimestre, comparativement à l'augmentation de 1.0% enregistrée au troisième trimestre. Le taux de progression annuel, établi à partir de la moyenne des variations sur douze mois pour les trois mois du quatrième trimestre, s'est élevé à 4.1%, soit un taux légèrement plus élevé que celui de 4.0% enregistré au trimestre précédent.

Principaux facteurs de la variation au quatrième trimestre

Comme il a été noté plus haut, l'indice d'ensemble non désaisonnalisé a progressé de 0.8% entre septembre et décembre (quatrième trimestre) 1988. Cette plus récente augmentain résulte en bonne partie d'une augmentation de 1.2% de l'indice d'ensemble sans les aliments, dont l'effet a été partiellement compensé par une diminution de 0.7% de l'indice des aliments.

Si l'on excepte la baisse de l'indice des aliments, les six autres composantes principales ont enregistré des augmentations allant de 0.2% à 1.4%. Cette dernière augmentation de l'IPC s'explique en bonne partie par la hausse de 1.4% de l'indice de l'habitation. Les augmentations de 1.1% de l'indice des transports et de 1.2% de l'indice des loisirs, de la lecture et de la formation ont chacune contribué d'une manière importante au dernier changement de l'indice d'ensemble. L'augmentation la quatrième en importance a été enregistrée par l'indice des produits du tabac et boissons alcoolisées (1.0%).

La récente augmentation de l'indice de l'habitation est attribuable en majeure partie à la hausse de 2.5% de l'indice du logement en propriété, dont environ la moitié résulte d'une augmentation de 5.6% des impôts fonciers, qui figurent dans l'IPC à chaque mois d'octobre. L'indice du logement en propriété a également été touché par une hausse substantielle de 1.6% des coûts d'intérêt hypothécaires et une augmentation de 2.2% du prix des maisons neuves. La plus récente augmentation de l'indice de l'habitation s'explique également en bonne par-tie par la hausse de 1.2% des loyers. D'autres augmentations appréciables ont été enregistrées en œ qui touche les prix de certains meubles et équipement ménager, ainsi que de certaines composantes (frais d'appels téléphoniques, services de garde d'enfants, aliments pour animaux et produits en papier) du groupe dépenses de ménage. Les frais d'hébergement des voyageurs ont diminué de 4.1% avec l'entrée en vigueur des tarifs saisonniers d'hiver.

L'augmentation de 1.1% de l'indice des transports est la conséquence d'une hausse de 1.6% de la sous-composante des transports privés, qu'a atténuée en partie une baisse de 2.1% de l'indice des transports publics. Au sein du groupe des transports privés, la pression principale est venue d'une augmentation moyenne de 5.8% du prix des nouveaux modèles automobiles de 1989 par rapport aux modèles de 1988, après que des ajustements eurent été effectués en vue de tenir compte des différences de qualité. Des augmentations ont également été enregistrées en ce qui touche certains frais de réparation et d'entretien de voitures, ainsi que les primes d'assurance-automobile.

Some part of the overall rise in the Private Transportation index was offset by a 3.0% decline in gasoline prices (reacting to an oversupply of crude petroleum) and a seasonal fall in automobile rental charges. The fall in the Public Transportation index reflected a 5.6% decline in air fares, mainly due to an increase in the proportion of passengers travelling at "seat sale" prices.

Much of the 1.2% rise in the Recreation, Reading and Education index was attributable to a 1.4% increase in the Recreation component. Price increases of seasonal recreational equipment and in theatre tickets, followed by a moderate hike in fees and dues related to recreational activities, explained this latest increase.

The Tobacco Products and Alcoholic Beverages index climbed 1.0% in the fourth quarter. The Tobacco Products index advanced by 1.3%, compared to the much slower rise of 0.7% reported by the Alcoholic Beverages index. In both cases, the increase was concentrated in the month of November, with higher manufacturers' prices cited as the main reason.

Increases in the Health and Personal Care index (0.6%) and in the Clothing index (0.2%) contributed marginally to the latest rise in the All-items index. In the first index, increases in non-prescribed medicine (2.6%) and in eye-care goods (1.5%) were the main contributors. In the second index, price increases reported for men's wear, materials and notions and dry-cleaning services were partially moderated by a decline of 0.5% in the Women's Wear index.

The Food index fell by 0.7%, mainly in response to a 1.5% decline in the index for Food Purchased from Stores, as the index for Food Purchased from Restaurants rose by 1.3%. A substantial part of the fall in grocery store prices was due to a decline of 18.3% in the Fresh Fruit index. Lower prices were also observed for poultry, pork, coffee and soft drinks. The decline was slowed down to some extent by price increases observed for fresh vegetables, beef, prepared and ready-cooked meat, fish, fats and oils and canned soups.

L'augmentation d'ensemble de l'indice des transports privés a été compensée en partie par une baisse de 3.0% du prix de l'essence (attribuable à une offre excessive de pétrole brut) et une diminution saisonnière des frais de location d'automobiles. La baisse de l'indice des transports publics est attribuable à une diminution de 5.6% des frais de transport aérien, causée principalement par une augmentation de la proportion des soldes de places.

La hausse de 1.2% de l'indice des loisirs, de la lecture et de la formation est attribuable en majeure partie à un accroissement de 1.4% de la composante des loisirs. Celui-ci s'explique par l'augmentation du prix du matériel récréatif saisonnier et des billets de cinéma, suivie d'une majoration modérée des cotisations dans le domaine des activités récréatives.

L'indice des produits du tabac et des boissons alcoolisées a progressé de 1.0% au quatrième trimestre. L'indice des produits du tabac s'est accru de 1.3%, beaucoup plus rapidement que l'indice des boissons alcoolisées (0.7%). Dans les deux cas, l'augmentation, qui s'est faite sentir surtout en novembre, est due principalement à la majoration des prix des manufacturiers.

Les hausses de l'indice de santé et des soins personnels (0.6%) et de l'indice de l'habillement (0.2%) ont très peu contribué à l'augmentation récente de l'indice d'ensemble. Elles s'expliquent surtout, dans le premier cas, par une progression des médicaments sans ordonnance (2.6%) et des produits liés aux soins les yeux (1.5%), et, dans le deuxième cas, par une majoration du prix des vêtements pour hommes, des tissus et des articles de mercerie et des services de nettoyage à sec, partiellement neutralisée par une baisse de 0.5% de l'indice des vêtements pour femmes.

L'indice des aliments a diminué de 0.7%, principalement à cause d'une baisse de 1.5% de l'indice des aliments achetés au magasin. L'indice des aliments achetés au restaurant a quant à lui augmenté de 1.3%. Une part substantielle de la baisse des prix dans les épiceries a été attribuable à une diminution de 18.3% de l'indice des fruits frais. Des prix moins élevés ont également été enregistrés pour le poulet, le porc, le café et les boissons gazeuses. La baisse a été ralentie dans une certaine mesure par les augmentations de prix enregistrées pour les légumes frais, le boeuf, les viandes cuites et préparées, le poisson, les huiles et corps gras, et les soupes en boîte.

INTRODUCTION

This quarterly publication presents a compendium of consumer prices and price index related information of both a current and historical nature. It provides a wide range of timely and detailed statistical information and serves as a complement to the monthly publication, The Consumer Price Index, Catalogue 62-001.

Part I of this report presents a synopsis of current consumer price index movements. This is presented in the form of tabular and graphic information. Some tabular information on international prices is also presented, in particular for some Canada - U.S. comparisons.

Parts II and III provide a detailed historical summary of monthly consumer price indexes in recent years. This summary contains considerable disaggregated information, again in the perspective of both the urban Canada and the separate city contexts.

Part IV of this report contains tables for the All-items and seven major components for each province.

Place-to-place comparative retail price information forms Part V of the report. This segment presents the most recent data with regards to average city retail prices and inter-city indexes of retail price differentials. Special feature articles, which are periodically included in the publication, are presented in Part VI.

Appendices serve as sources of reference for the statistical data presented in the preceding segments of the report. Appendices 1 and 2 contain explanatory notes pertaining to consumer price index data; Appendix 3 provides reference material for seasonal adjustment methodology in the context of its application to the Consumer Price Index; Appendices 4 and 5 present background information relating to place-to-place retail price comparisons.

Cette publication présente un résumé de renseignements historiques et courants des prix à la consommation et des indices de prix. Elle fournit une gamme d'informations statistiques étendue, d'une façon détaillée, et sert de complément à la publication mensuelle, L'indice des prix à la consommation, n^0 62-001 au catalogue.

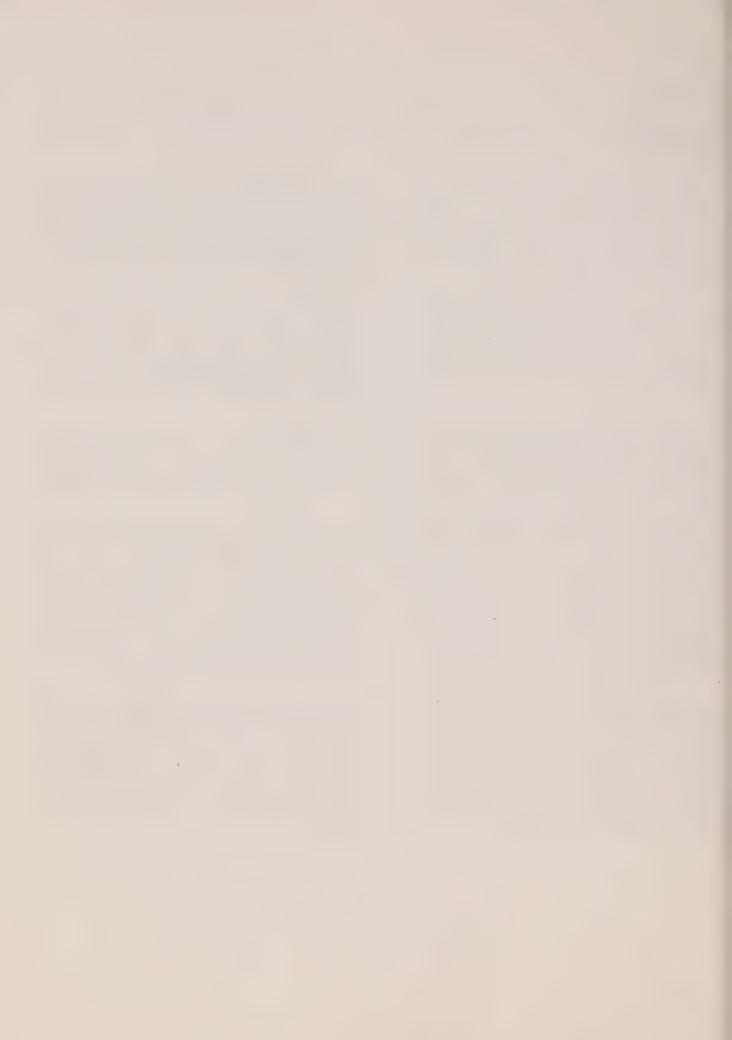

La partie I de ce rapport contient un aperçu synoptique qui présente les mouvements courants des prix à la consommation. Ces informations sont présentées sous la forme de tableaux et de graphiques. Des tableaux comportant de l'information sur les prix internationaux sont également présentés, particulièrement en ce qui regarde certaines comparaisons entre le Canada et les É.-U.

Les parties II et III fournissent un résumé historique détaillé des indices mensuels des prix à la consommation des dernières années. Ce résumé contient des renseignements pour le Canada et les villes à un niveau beaucoup plus désagrégé.

La partie IV de ce rapport contient des tableaux pour l'ensemble et les sept composantes principales pour chaque province.

Des informations sur les prix de détail comparés d'un endroit à l'autre composent la partie V de ce rapport. Cette section fournit les plus récentes données au sujet des prix de détail moyens par ville et des indices comparatifs des prix de détail entre les villes. Les articles spéciaux, qui font périodiquement partie de cette publication, se retrouvent à la partie VI.

Les appendices servent de référence aux données statistique présentées dans les parties précédentes du rapport. Les appendices 1 et 2 contiennent les notes explicatives reliées aux données de l'indice des prix à la consommation; l'appendice 3 fait référence à la méthode des ajustements saisonniers dans son application à l'indice des prix à la consommation; les appendices 4 et 5 fournissent des informations de base reliées aux comparaisons de prix d'un endroit à l'autre.

⁽¹⁾ Seasonal adjustment of the Consumer Price Index for Canada is undertaken separately for each of the seven major components of the CPI with the quarterly calculation being made before linking or chaining takes place. The resulting seven major component indexes as well as the All-items and All-items excluding Food aggregates are then "linked" or "chained" to form continuous series starting from January 1978. The seasonally adjusted monthly data are published without further revision until the year end, when revisions to any months data may be made from January 1985 forward (the start of the 1982 basket). These revisions are published with the January release.

(1) La désaisonnalisation de l'indice des prix à la consommation pour le Canada est effectuée séparément pour chacune des sept composantes principale de l'IPC. Les calculs sont faits avant de procéder à l'enchaînement. Les indices des sept composantes principales, d'ensemble et d'ensemble sans les aliments ainsi obtenus sont ensuite "enchaînés" pour déterminer les séries continues à partir de janvier 1978. Les données désaisonnalisées mensuelles sont publiés sans autre révision jusqu'à la fin de l'année où une révision peut être effectuée pour tout mois à compter de janvier 1985 (le début du panier de 1982). Ces révisions sont émis avec la publication de janvier.

Pour de plus amples renseignements et détails sur les spécifications des articles consulter l'appendice 4.
 Nous avons laissé les espaces en blanc dans ce tableau lorsque la qualité et (ou) la quantité des prix relevés ne nous a pas permis d'établir des moyennes fiables.
 Whitehorse n'est pas inclus dans les moyennes pondérées des villes.
 Les prix du bifteck de surlonge sans la partie du filet sont relevés à Thunder Bay, Winnipeq, Regina, Saskatoon, Edmonton, Calgary et Whitehorse.
 Chicoutimi (450 g).

Part VI
SPECIAL FEATURES

Partie VI
ARTICLES VEDETTES

Introduction

Over the five-year period 1984 to 1988, the All-items Consumer Price Index (CPI) for Canada rose at an average annual rate of 4.2%. The rate of increase in each year varied very little from that trend, ranging from 4.1% to 4.4%. During the same period, the components which make up the CPI had average annual rates of increase that varied quite widely. This article examines some of these differences, noting those indexes which rose faster than the average rate and those which had changes below the overall average.

Average annual rates of change for the five-year period and standard deviations around these means have been calculated for aggregate and commodity indexes. Indexes are said to have above or below average changes, if their average annual change is more than one standard deviation from the annual average for the All-items CPI. As a measure of the variation in rate of price change over the five-year period, we have calculated the coefficient of variation for each index. This measure represents the standard deviation as a percentage of the average annual change over the period. The larger the coefficient of variation, the more the annual rates of change have varied around the five-year mean rate.

ECART DES MOUVEMENTS DE L'INDICE DES PRIX À LA CONSOMMATION (1984-1988)

Introduction

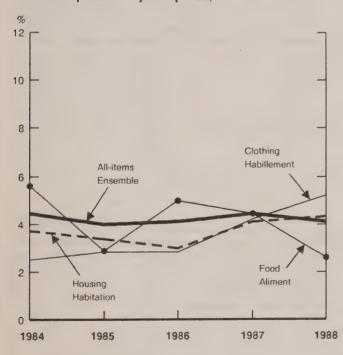

Au cours de la période de cinq ans qui s'étend de 1984 à 1988, l'indice d'ensemble des prix à la consommation (IPC) du Canada a progressé au taux annuel moyen de 4.2%. La hausse enregistrée chaque année a très peu varié, s'échelonnant entre 4.1% et 4.4%. Au cours de la même période, les taux d'augmentation annuels moyens des composantes de l'IPC ont subi des variations assez radicales. Dans le présent document on étudie certains de ces écarts, en signalant les indices qui ont progressé plus rapidement que la moyenne et ceux dont la variation était inférieure à la moyenne globale.

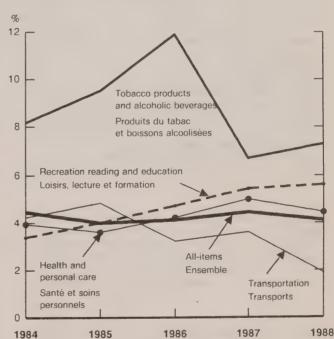

a calculé les taux de variation annuels moyens pour la période de cinq ans et les écarts-types en fonction de ces moyennes des indices agrégés et des produits. Le taux annuel des indices est considéré supérieur ou inférieur s'il diffère de plus d'un écart-type de la moyenne annuelle de l'indice d'ensemble des prix à la consommation. Pour mesurer la variation du taux de changement de prix au cours de la période de cinq ans, nous avons calculé le coefficient de variation de chaque indice. Cette mesure représente l'écart-type exprimé sous la forme d'un pourcentage de la variation annuelle moyenne au cours de cette période. Plus le coefficient de variation est élevé, plus les taux annuels de variation se sont écartés du taux moyen pour la période de cinq ans.

Graphique 1

Chart 1 Annual Rates of Change in Consumer Price Index by All-items and Major Component Indexes, 1984-1988

Taux de variation annuel de l'indice des prix à la consommation selon l'ensemble et les composantes principales, 1984-1988

Major Component Indexes

The annual rates of increase for the All-items and the seven major components are presented in Chart 1. Increases in the Tobacco Products and Alcoholic Beverages index were well above those of the All-items index throughout the 5-year period. The Recreation,

Indices des principales composantes

Le graphique 1 illustre les taux annuels d'augmentation de l'indice d'ensemble et des indices des sept composantes principales. Les hausses de l'indice des produits du tabac et des boissons alcoolisées sont beaucoup plus élevées que celles de l'indice d'ensemble tout au cours de la période de cinq Reading and Education index, as well as the Health and Personal Care index, have also posted rates of increase above the All-items index in the three most recent years. The Transportation index, by contrast, rose at rates that were well below the All-items index in the three most recent years. Clothing and Housing were consistently below the All-items increases for the first four years, but rose above the national average in the most recent year. Food has fluctuated widely, being above average in two years, below average in two and almost equal to the All-items change in the other year.

Text Table 1 contains the 5-year average of the annual rates of change and the coefficients of variation for the All-items and the seven major components. The All-items index rose by 4.2% with a standard deviation of 0.2%. According to the criterion noted in the introduction, an above average rate of increase is one of at least 4.4%, while a below average rate would be one of 4.0% or lower.

ans. L'indice des loisirs, de la lecture et de la formation, de même que celui de la santé et des soins personnels, ont affiché des taux de progression supérieurs à celui de l'indice d'ensemble au cours des trois dernières années. Par contre, les taux d'augmentation de l'indice du transport étaient bien inférieurs à ceux de l'indice d'ensemble au cours des trois dernières années. Les hausses des indices de l'habillement et de l'habitation ont constamment été inférieures à celle de l'indice d'ensemble au cours des quatre premières années mais elles ont dépassé la moyenne nationale l'an dernier. L'indice des aliments a varié considérablement, atteignant un niveau supérieur à la variation moyenne de l'indice d'ensemble pendant deux ans, inférieur à celle-ci pendant deux autres années et presque égal pendant une autre année.

Le tableau explicatif 1 renferme la moyenne de 5 ans des taux annuels de variation et les coefficients de variation pour l'indice d'ensemble et les indices des sept composantes principales. L'indice d'ensemble s'est accru de 4.2% et l'écart-type a atteint 0.2%. Conformément aux critères dont il a été question dans l'introduction, un taux d'augmentation supérieur à la moyenne doit atteindre au moins 4.4% tandis qu'un taux inférieur à la moyenne ne doit pas dépasser 4.0%.

TEXT TABLE I. Average Annual Percentage Changes, Relative Variation (1984-1988) and Weights for All-items and Major Component Indexes of the Consumer Price Index for Canada.

TABLEAU EXPLICATIF I. Taux de variation annuels moyens, variation relative (1984-1988) et pondérations pour l'ensemble et les composantes principales de l'indice des prix à la consommation pour le Canada.

	Percentage Change	Coefficient of Variation in Percentage	Weights
	Taux de variation	Coefficient de variation en pourcentage	Pondérations
All-items - Ensemble	4.2	4.45	100.0
Food - Aliments	4.1	31.89	20.0
Housing - Habitation	3.7	14.17	38.1
Clothing - Habillement	3.5	33.07	8.4
Transportation - Transports	3.5	31.05	15.8
Health and personal care – Santé et soins personnels Recreation, reading and education – Loisirs, lecture	4.2	12.58	4.0
et formation Tobacco products and alcoholic beverages -	4.6	20.10	8.3
Produits du tabac et boissons alcoolisées	8.7	23.70	5.4

Based on this criterion, the Tobacco Products and Alcoholic Beverages index and the Recreation, Reading and Education index had above average increases during this period. The Housing, Clothing and Transportation indexes had below average increases. The increases for the Food and the Health and Personal Care indexes were on average not greatly different than that of the All-items.

The coefficient of variation of 4.4% for the All-items index reflected stable rates of price change over this period. Of the seven major components, Housing and Health and Personal Care had the lowest coefficients of variation, but each was about three times as great as that for the All-items. The most volatile series were Food, Clothing and Transportation, all having coefficients of variation of over 30%. Recreation, Reading and Education and Tobacco Products and Alcoholic Beverages, the indexes with the highest average increases, had coefficients of variation just over 20%.

Si l'on se fie à ces critères, les indices des produits du tabac et des boissons alcoolisées et des loisirs, de la lecture et de la formation ont subi des augmentations supérieures à la moyenne au cours de cette période. Par contre, les augmentations des indices de l'habitation, de l'habillement et du transport se situaient en-dessous de la moyenne. Dans l'ensemble, les hausses des indices des aliments et de la santé et des soins personnels ne s'écartaient pas beaucoup de celle de l'indice d'ensemble.

Le coefficient de variation de 4.4% de l'indice d'ensemble est le reflet des taux très stables de changement de prix au cours de cette période. Parmi les sept composantes principales, les coefficients de variation les moins élevés, qui sont ceux de l'habitation et de la santé et des soins personnels, étaient individuellement environ trois fois supérieurs à celui de l'indice d'ensemble. Les séries les plus instables, c'est-à-dire celles des aliments, de l'habillement et du transport, affichaient toutes des coefficients de variation de plus de 30%. Les coefficients de variation des indices des loisirs, de la lecture et de la formation et des produits du tabac et des boissons alcoolisées, dont les augmentations moyennes étaient les plus élevées, dépassaient à peine 20%.

A breakdown of the major component indexes into their largest subgroups is contained in Text Table II. Within the Tobacco Products and Alcoholic Beverages index, both major sub-groups have risen at high annual average rates. However, the Tobacco Products index, at 12.6%, has risen almost twice as fast as the 6.6% average annual rate posted by the Alcoholic Beverages index. Recreation, Reading and Education had above average increases in two of its major sub-groups, with Reading rising 6.4% and Education increasing 5.8%.

Vous trouverez au tableau explicatif 2 la ventilation des indices des composantes principales en fonction des principaux sous-groupes. Les taux d'augmentation annuels moyens des deux sous-groupes principaux de l'indice des produits du tabac et des boissons alcoolisées sont élevés. Toutefois, l'indice des produits du tabac qui s'établit à 12.6%, a progressé presque deux fois plus rapidement que celui des boissons alcoolisées, dont le taux annuel moyen atteint 6.6%. Deux des principaux sous-groupes de l'indice des loisirs, de la lecture et de la formation ont enregistré des hausses moyennes supérieures de 6.4% pour la lecture et de 5.8% pour la formation.

TEXT TABLE II. Average Annual Percentage Changes, relative variation (1984-1988) and weights by Major Components and Sub-Groups.

TABLEAU EXPLICATIF II. Taux de variation annuels moyens, variation relative (1984-1988) et pondérations par composantes principales et sous-groupes.

	Percentage Change	Coefficient of Variation in Percentage	Weights
	Taux de variation	Coefficient de variation en pourcentage	Pondérat ions

rivate transportation - Transport privé	3.3	30.52	13.8
ublic transportation - Transport public	5.2	140.65	2.0
ealth and personal care - Santé et soins personnels	4.2	12.58	4.0
ealth care - Soins de santé	5.8	8.44	1.5
ecreation, reading and education - Loisirs, lecture et formation	4.6	10.10	8.3
decreation - Loisirs	4.2	27.30	6.3
leading - Lecture	6.4	22.36	0.8
ducation - Formation	5.8	12.38	1.1
obacco products and alcoholic beverages - Produits du tabac et boissons alcoolisées	8.7	23.70	5.5
obacco products - Produits du tabac	12.6	36.76	
clcoholic beverages - Boissons alcoolisées	6.6	20.27	3.7

Within Transportation, the Private Transportation group rose at a relatively modest pace of 3.3%, as compared to the 5.2% increase registered by the Public Transportation index. A similar difference in rates of increase was also observed for the Health and Personal Care component, where the Personal Care index rose 3.1%, while the Health Care index increased 5.8%. Four of the five sub-groups in Clothing had average increases which were lower than the All-items average and the fifth was equal to the All-items rate. Within Housing, all of the major sub-groups moved at below average increases.

Dans la catégorie du transport, le groupe du transport privé a progressé à un rythme relativement modeste de 3.3%, comparativement à la hausse de 5.2% observée pour l'indice du transport public. On a également relevé une différence similaire au niveau des taux d'augmentation de la composante de la santé et des soins personnels, l'indice des soins personnels ayant progressé de 3.1% tandis que celui de la santé s'étant accru de 5.8%. Quatre des cinq sous-groupes de l'habillement ont atteint des augmentations moyennes inférieures à celle de l'indice d'ensemble et, dans le cas du cinquième sous-groupe, l'augmentation moyenne a atteint le même niveau que celle de l'indice d'ensemble. Tous les principaux sous-groupes de la catégorie de l'habitation ont atteint des niveaux inférieurs à l'augmentation moyenne.

Special Aggregate Indexes

Commodities in the CPI basket are grouped into several special aggregates for various analytical purposes. The annual average increase for a selected set of these indexes is presented in Text Table III. A traditional breakdown is between the Food and the All-items excluding Food index. These two components rose at approximately the same rate over the five-year period, but the Food index was much more volatile. It is apparent that the rate of increase in the Energy index was a major moderating factor in the overall rate of price change during this period. However, price changes in the energy market as a whole have been rather varied. The variability was more pronounced in the Petroleum Products market where prices rose, on average, by only 0.6%, less than half the rate of the Energy index.

Indices agrégés spéciaux

Les biens et services qui font partis du panier de l'IPC sont regroupés en plusieurs agrégats spéciaux à diverses fins analytiques. Le tableau explicatif III expose les augmentations annuelles moyennes de certains de ces agrégats. On procède traditionnellement à une ventilation au niveau des aliments et de l'indice d'ensemble sans les aliments. Ces deux indices ont progressé approximativement au même rythme au cours de la période de cinq ans mais l'indice des aliments a été beaucoup plus instable. Il est évident que le taux d'augmentation de l'indice de l'énergie a été un important facteur de ralentissement du taux global de changement de prix au cours de cette période. Toutefois, les changements de prix sur le marché énergétique ont été, dans l'ensemble, plutôt variés. Cette variabilité aété plus prononcée dans le cas du marché des produits pétroliers où les prix n'ont augmenté en moyenne que de 0.6%, soit moins de la moitié du taux de l'indice de l'énergie.

TEXT TABLE III. Average Annual Percentage Changes, Relative Variation (1984-1988) and Weights by Selected Categories of the Consumer Price Index for Canada.

TABLEAU EXPLICATIF III. Taux de variation annuels moyens, variation relative (1984-1988) et pondérations par certaines catégories de l'indice des prix à la consommation pour le Canada.

	Percentage Change	Coefficient of Variation in Percentage	Weights
	Taux de variation	Coefficient de variation en pourcentage	Pondérations
All-items - Ensemble	4.2	4.45	100.0
Food - Aliments All-items excluding food - Ensemble sans les aliments	4.1 4.2	31.89 4.28	20.0 80.0
Energy - Energie All-items excluding energy - Ensemble sans l'énergie	1.4 4.4	366.34 12.44	8.2 91.8
Petroleum products - Produits pétroliers	0.6	1369.28	5.2
Food and energy - Aliments et énergie	3.3	49.69	
All-items excluding food and energy - Ensemble sans les aliments et l'énergie	4.5	14.06	71.8
Goods - Biens Durable goods - Biens durables Semi-durable goods - Biens semi-durables Non-durable goods - Biens non durables	3.9 3.7 3.3 4.2	13.55 0.86 34.43 28.48	54.7 11.8 9.8 33.1
Services - Services Shelter services - Services pour logement	4.4 4.2	12.80 20.34	45.3 22.97
Services excluding shelter services - Services sansservices pour logement	4.6	18.95	22.33

The increasing importance of the services sector of the economy makes the rates of price change for Goods and Services an interesting comparison. It can readily be seen that the Services index was a source of upward pressure on the All-items index. Within the Services index, non-shelter services had the larger than average increase, while within the Goods index, semi-durables produced a lower than average increase.

Commodities Within Major Components

In this section, the focus switches to how individual commodity indexes changed relative to the annual average for the major component of which they are a part. Each major component is examined in turn using the annual average and the standard deviation of that major component to determine above and below average changes for indexes within that component. Thus, the focus is on variations within each major component, rather than

En raison de l'importance de la croissance du secteur des services dans l'économie, il est intéressant de comparer les taux de changement de prix des biens et services. On peut constater que l'indice des services a exercé une pression à la hausse sur l'indice d'ensemble. Dans le cas de l'indice des services, les services sans le logement ont connu la plus forte augmentation moyenne, tandis que dans celui de l'indice des biens, l'augmentation moyenne la plus faible a été enregistrée par les biens semi-durables.

Produits à l'intérieur des composantes principales

Dans cette section, on étudie surtout la façon dont les indices individuels des biens et services varient par rapport à la moyenne annuelle de la composante principale dont ils font partie. On étudie chacune des composantes principales en se servant de sa moyenne annuelle et de son écart-type pour déterminer les variations supérieures ou inférieures à la moyenne des indices à l'intérieur de chaque composante. Par conséquent, on s'intéresse surtout aux variations au sein de

variations in comparison to the All-items index. The Appendix contains a list of the commodites which have been assessed as above and below average for each major component.

Food

There are about 120 commodities priced for the Food component of the CPI, each of which makes up only a small portion of the total weight for this component. Of these 120 commodities, there were 17 that had above average increases, while there were 25 with below average increase. These annual average increases ranged from a high of 17.5% for spices to a low of 1.4% for jelly powder.

Housing

In Housing, there were 19 indexes with above average increases and 15 with below average increases. Allowing for the importance of the weight of these commodities, the most important above average series were Rent (4.2%), Property Taxes (6.0%), Replacement Cost (7.5%) and Electricity (4.6%). Below average series with a large impact were Mortgage Interest Cost (1.4%), Telephone Service (0.1%), Piped Gas (0.4%) and Fuel Oil (0.9%).

Clothing

Only four of the 50 priced commodities from the Clothing component were above the annual average and only four below the average. The annual average increases ranged from 7.7% for Women's Fur Coats to 1.5% for Women's Precious Jewellery. The small number of deviating series for this component may be the result of this market being defined more narrowly than is the case of the other major component groupings.

Transportation

Eight commodities in Transportation rose more than the average, the most important being Automobile Purchase (about 30% of the weight in Transportation) which rose on average 4.7%. Other important series with above average increases were Insurance Premiums (5.7%) and Air Transportation (4.8%). By far the most important commodity with a below average rate of increase was Gasoline which averaged only 0.9% and accounts for about 25% of the Transportation weight.

Health and Personal Care

Seven series registered above average increases in Health and Personal Care, five of which were from the Health Care component. The more important of these above average series were Medicinal and Pharmaceutical Products (8.2%) and Dental Procedures (4.9%). Of those series with below average increases, seven of the eight were Personal Care series. The one Health Care series was for contact lenses which had an average annual increase of 0.1%.

Recreation, Reading and Education

In the Recreation, Reading and Education component, 12 series were above average with the largest annual average increases observed for live theatre performances (8.7%) and cablevision services (8.3%). The most notable of the 14 below average series were the four series which declined: television sets (-2.2%), radio combinations (-2.7%), video tapes (-3.1%) and electronic-equipment combinations (-0.2%).

chaque composante principale plutôt qu'aux variations comparées à l'indice d'ensemble. L'appendice renferme la liste des biens et services dont le taux de variation est supérieur ou inférieur à la moyenne pour chaque composante principale.

Aliments

La composante des aliments de l'IPC renferme environ 120 produits dont chacun représente seulement une petite portion de la pondération totale de cette composante. De ce nombre, 17 produits ont atteint des augmentations supérieures à la moyenne et 25, des augmentations inférieures à la moyenne. Les hausses moyennes annuelles se sont échelonnés de 17.5% pour les épices à 1.4% pour la poudre à gelée.

Habitation

Dans la composante de l'habitation, on compte 19 indices dont les augmentations sont supérieures à la moyenne et 15 dont les augmentations sont inférieures à la moyenne. Compte tenu de l'importance de la pondération de ces biens et services, les séries au-dessus de la moyenne les plus importantes sont celles du loyer (4.2%), des impôts fonciers (6.0%), du coût de remplacement (7.5%) et de l'électricité (4.6%). Les séries inférieures à la moyenne dont l'influence a été importante sont celles du coût d'intérêt hypothécaire (1.4%), du service téléphonique (0.1%), du gaz naturel (0.4%) et du mazout (0.9%).

Habillement

Seulement quatre des 50 produits dont on tient compte dans la composante de l'habillement ont atteint un niveau supérieur à la moyenne annuelle et seulement 4 se sont établis à un niveau inférieur à celle-ci. Les hausses annuelles moyennes se sont échelonnées de 7.7% pour les manteaux de fourrure pour femmes à 1.5% pour les bijoux précieux pour femmes. Le faible nombre de séries présentant un écart peut s'expliquer par le fait que ce marché est plus étroitement défini que celui des autres composantes principales.

Transport

Pour ce qui est du transport, on a relevé huit produits supérieurs à la moyenne, le plus important de l'achat de véhicule automobile, (environ 30% de la pondération des transports) qui s'est accru en moyenne de 4.7%. Parmi les autres séries importantes dont les augmentations sont au-dessus de la moyenne, on compte les primes d'assurance (5.7%) et le transport aérien (4.8%). Le plus important produit dont le taux d'augmentation est inférieur à la moyenne est, de loin, celui de l'essence qui n'a progressé en moyenne que de 0.9% et représente environ 25% de la pondération des transports.

Santé et soins personnels

Dans l'indice de la santé et des soins personnel, on a relevé sept séries dont les augmentations étaient supérieures à la moyenne et cinq d'entre elles faisaient partie de la composante de la santé. Parmi celles-ci, les plus importantes sont celles des médicaments et des produits pharmaceutiques (8.2%) et des services de soins dentaires (4.%). Sept des huit séries dont les augmentations sont inférieures à la moyenne font partie du groupe des soins personnels. À cet égard, la seule série rattachée à la santé est celle des lentilles cornéennes dont l'augmentation annuelle moyenne s'établit à 0.1%.

Loisirs, lecture et formation

Dans la composante des loisirs, de la lecture et de la formation, on compte 12 séries supérieures à la moyenne et les hausse annuelles moyennes les plus importantes ont été observées pour les spectacles de théâtre (8.7%) et les services de télédistribution (8.3%). Les plus remarquables des 14 séries inférieures à la moyenne sont les suivantes: téléviseurs (-2.2%), meubles-radios (-2.7%), bandes-vidéos (-3.1%) et matériel électronique (-0.2%).

Tobacco Products and Alcoholic Beverages

The annual average increases for cigarettes (12.6%) and cigars (11.9%) were both well above the annual average for the Tobacco Products and Alcoholic Beverages index. Below average components were served liquor (6.0%), wine purchased from stores (6.2%) and liquor purchased from stores (5.8%).

Average Annual Increases By City

Rates of price change vary across geographical regions, as well as across commodities. Chart 2 shows the average annual increases for the All-items indexes for each of sixteen cities for which CPIs are published. Using the same criterion as above when looking at the major component indexes, these rates of change can also be grouped into above and below average changes.

Montréal and Toronto are the only two cities in this list which have 5-year average annual rates of increase which are above the Canada average, with increases of 4.4% and 4.8% respectively. There are tencities which have lower than average rates of increase, while four cities are not different from the overall average. The cities with above and near average increases were concentrated in Quebec and Ontario, with Thunder Bay being the only city in these provinces which had a below average annual increase. All of the cities in the Atlantic Region and most in the Prairies had below average rates of change.

Produits du tabac et boissons alcoolisées

Les augmentations annuelles moyennes des cigarettes (12.6%) et des cigares (11.9%) sont bien supérieures à la moyenne annuelle de l'indice des produits du tabac et des boissons alcoolisées. Au nombre des composantes inférieures à la moyenne, on compte les spiritueux servis dans les débits (6.0%) le vin acheté dans les magasins (6.2%) et les spiritueux achetés dans les magasins (5.8%).

Hausses annuelles moyennes selon la ville

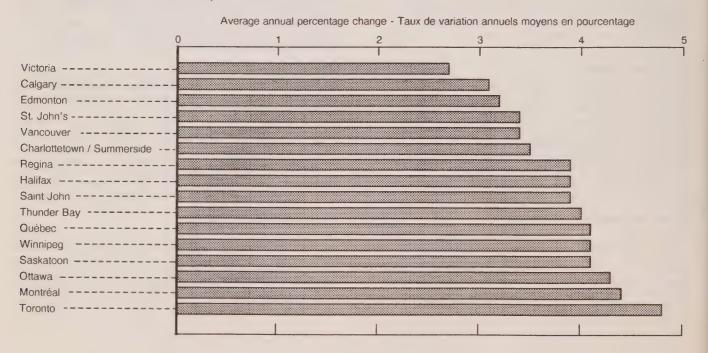

Les taux de changement de prix varient tant au niveau des régions géographiques qu'à celui des biens et services. Le graphique 2 illustre les hausses annuelles moyennes des indices d'ensemble de 16 villes pusis séparément pour lesquelles des IPC sont publiés. En se fondant sur les mêmes critères utilisés plus haut pour étudier les indices des principales composantes, on peut également regrouper ces taux de changement qui se situent au-dessus et au-dessous également de la moyenne.

Montréal et Toronto sont les deux seules villes de cette liste dont les taux annuels d'augmentation moyens sur cinq ans, qui s'établissent respectivement à 4.4% et à 4.8%, sont supérieurs à la moyenne nationale. Dix villes ont des taux d'augmentation moyens inférieurs et quatre ont des taux d'augmentation équivalents à celui de la moyenne globale. Les villes pour lesquelles on a relevé un taux d'augmentation qui dépasse la moyenne, ou qui se rapproche de celle-ci, se trouvent surtout au Québec et en Ontario, et Thunder Bay est la seule ville de ces provinces où l'on a observé une augmentation annuelle inférieure à la moyenne. Les taux d'augmentation de toutes les villes de la région de l'Atlantique et de la plupart de celles des Prairies étaient inférieurs à la moyenne.

Graphique 2

Chart 2 The Rank Order of Average Annual Rates of Increase (1984-1988) in the All-items Consumer Price Index by City

Taux d'augmentation annuels moyens (1984-1988) des indices d'ensemble de l'indice des prix à la consommation des villes, en ordre croissant

TEXT TABLE IV. Average Annual Percentage Change (1984-1988) for All-items Consumer Price Index and Major Components by Canada and Cities

TABLEAU EXPLICATIF IV. Taux de variation annuels moyens (1984-1988) de l'indice d'ensemble des prix à la consommation, et ses composantes principales pour le Canada et les villes.

	All-items	Food	Housing	Clothing	Transportation	Health and personal care	Recreation reading and education	Tobacco products and alcoholic beverages
	Ensemble	Aliments	Habitation	Habillement	Transports	soins	Loisirs lecture et formation	Produits du tabac et boissons alcoolisées
Canada	4.2	4.1	3.7	3.5	3.5	4.2	4.6	8.7
St. John's	3.4	3.1	3.0	2.8	2.9	3.9	4.4	6.2
Charlottetown/								
Summerside	3.5	3.5	2.5	2.4	2.4	4.9	4.9	9.3
Halifax	3.9	4.0	3.0	2.8	3.2	4.3	5.1	9.6
Saint John	3.9	4.3	3.4	3.1	2.6	3.6	4.7	9.1
Québec	4.1	4.7	3.6	3.7	2.7	4.7	3.6	8.8
Montréal	4.4	4.6	4.2	3.4	3.3	4.4	4.0	9.0
Ottawa	4.3	3.5	4.1	3.7	4.3	4.8	4.4	8.3
Toronto	4.8	4.3	5.0	4.0	4.2	4.7	5.0	8.1
Thunder Bay	4.0	3.6	3.3	3.0	4.5	4.1	4.7	8.1
Winnipeg	4.1	3.6	3.6	3.5	3.3	3.9	5.5	9.8
Regina	3.9	2.8	3.4	2.8	3.4	6.8	4.8	8.9
Saskatoon	4.1	3.3	3.6	3.1	3.3	8.2	4.9	8.2
Edmonton	3.2	4.1	1.5	3.2	3.0	3.3	4.5	10.0
Calgary	3.1	4.0	1.1	3.3	3.0	3.8	4.2	9.8
Vancouver *	3.4	3.5	2.2	2.8	3.8	3.1	4.9	8.8
Victoria	2.7	3.0	1.2	3.0	1.9	3.4	5.2	8.6

The average annual increases for the seven major components across these cities (Text Table IV), showed that the Tobacco Products and Alcoholic Beverages indexes in all cities rose above the average for the Canada All-items index. Clothing, on the other hand, was below average in all cities. Increases for the Recreation, Reading and Education indexes were above average in all but three cities, while the average rates of increase for the Housing indexes were below average in all but three cities. The other major component indexes showed mixed results across the cities.

Les augmentations annuelles moyennes des composantes principales de ces villes (tableau explicatif IV), ont démontré que les indices des produits du tabac et des boissons alcoolisées dans toutes ces villes étaient supérieurs à la moyenne de l'indice d'ensemble du Canada. Par ailleurs, l'habillement se situait à un niveau inférieur à la moyenne dans toutes les villes. Les augmentations des indices des loisirs, de la lecture et de la formation dépassaient la moyenne dans toutes les villes à l'exception de trois d'entre elles, tandis que les taux d'augmentation moyens des indices du logement étaient inférieurs à la moyenne dans toutes les villes, à part trois exceptions. Les indices des autres composantes principales varaient d'une ville à l'autre.

Appendice 1

THE CONSUMER PRICE INDEX

The Consumer Price Index (CPI) measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is of an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there are continually measurable market prices over time. Changes in the costs of this basket are therefore due only to "pure" price movements, i.e., price movements that are not associated with changes in the quality and/or quantity of the set of consumer goods and services in the basket.

The Consumer Price Index for each city measures price change from one time period to another within that specific city. Thus, while city CPI's show the movement of prices over time in each city, they do not indicate price level differences between cities or between cities and Canada. Such inter-city price comparisons for a selected number of items sold in grocery stores for 26 cities are available at present in Part V of this publication. Inter-spatial indexes covering approximately two thirds of the CPI basket for a selected number of cities are also available in this section.

Coverage

Beginning with the December 1984 to January 1985 price change, the weights used in the Consumer Price Index are those pertaining to 1982 expenditure patterns. Data used for establishing these patterns were obtained through the 1982 Family Expenditure Surveys. The expenditure data represents the expenditures of all private households (families and individuals) living in Canadian urban centres with a population of 30,000 or more. Population estimates for 1982 revealed 81 such urban centres. Largely due to limitations on the availability of detailed information on consumer expenditures it has become necessary to group the 81 urban centres into 34 urban centre strata. An urban centre stratum may be interpreted as a geographical unit around which the sampling framework of the CPI is constructed.

L'INDICE DES PRIX À LA CONSOMMATION

L'indice des prix à la consommation (IPC) mesure la variation dans le temps, exprimée en pourcentage, du coût à l'achat d'un "panier" constant de biens et de services, qui représente les achats faits par un groupe particulier de la population au cours d'une période donnée. Le "panier" renferme des biens et des services de quantité et de qualité invariables ou équivalentes et dont les prix sont mesurables au cours du temps. C'est ainsi que les variations de son coût résultent uniquement des mouvements "purs" de prix, c.-à-d. des mouvements de prix qui ne sont pas attribuables à des changements de qualité ou de quantité des biens et services de consommation du panier.

L'indice des prix à la consommation de chaque agglomération urbaine mesure les variations de prix entre deux périodes dans cette agglomération. Aussi les IPC des villes indiquent-ils le mouvement des prix dans le temps dans chaque agglomération, mais non les différences de niveau des prix entre les villes ou bien entre les villes et le Canada. De telles comparaisons entre les villes en ce qui concerne les niveaux de prix de certains articles vendus dans les épiceries sont présentées, pour 26 villes, à la Partie V de la présente publication. On y trouve également, pour certaines villes, des indices interspatiaux portant sur les deux tiers environ du panier de l'IPC.

Champ d'observation

À compter de janvier 1985, les pondérations utilisées pour l'indice des prix à la consommation se rapportent à la composition des dépenses de 1982. Les données qui ont servi à établir cette composition proviennent des enquêtes sur les dépenses des familles de 1982. Les données sur les dépenses représentent les dépenses de tous les ménages privés (familles et personnes seules) qui habitent les centres urbains du Canada qui comptent 30,000 habitants ou plus. D'après les estimations démographiques pour 1982, 81 centres urbains répondent à ce critère de population. En raison principalement du manque de renseignements détaillés sur les dépenses des consommateurs, il a été nécessaire de grouper les 81 centres urbains en 34 strates de centres urbains. Une strate de centres urbains peut se définir comme une unité géographique à partir de laquelle est constituée la base de sondage de l'IPC.

Separate CPI's are published for 18 of these centres which, together, accounted for approximately 70% of the total 1982 current consumption expenditures reported in the 81 centres. These 18 centres were, in part, selected in order to permit the publication of at least one CPI in each province. Some 300 commodities are priced in each of these 18 cities while in the remaining 63 urban centres, the number of commodities surveyed is fewer, with clothing and home furnishings being the notable exclusions.

Prices

The prices used in the calculation of the CPI are retail prices without regard to whether they are described as regular, special, etc. inclusive of all sales and excise taxes applicable to individual commodities. The pricing cycle starts in the latter part of each month and extends to the middle part of the following month. Although prices for most CPI items are collected on a monthly basis, some are priced less frequently, e.g., property taxes, automobile registration fees, dry cleaning services. However, such goods or services scheduled for pricing at less than monthly intervals will be priced in any month when there is evidence to suggest that significant price changes may occur prior to the next regularly scheduled pricing. Prices of food items, some of which are quite volatile from week to week are collected twice monthly, in the first and the third week of each month. This twice-a-month pricing is done in sixteen cities and goes a long way to fulfilling the needs of a more representative measure of monthly price changes for commodities whose prices tend to fluctuate in a noticeable fashion within the course of a month. The number of prices observed in a given city depends upon the importance of that city's expenditures to the total Canada expenditure and also the nature of the commodity, with those commodities displaying a high variability of price change generally requiring more observations. The selection of outlets in which prices are to be collected is judgmental (other than for rents) with the sample being designed to cover volume selling establishments.

Weights and Linking

The weights used in the calculation of the Consumer Price Index are periodically updated. This is a necessary procedure which serves to ensure that weights reflect changes in consumer expenditures thereby maintaining the relevancy of the index. As a result, different weighting systems are in effect in different time periods.

Des IPC distincts sont publiés pour 18 centres qui, ensemble, interviennent pour près de 70% du total des dépenses courantes de consommation déclarées en 1982 par les 81 centres. Les 18 centres ont été choisis, en partie, parce qu'ils permettent la publication d'un IPC au moins dans chaque province. On relève les prix de quelque 300 produits dans chacune des 18 villes; ce nombre est plus faible dans les 63 centres restants, les produits exclus étant principalement l'habillement et les articles d'ameublement.

Prix

Les prix servant au calcul de l'IPC sont les prix au détail qu'il s'agisse de prix réguliers, de prix spéciaux, etc. et englobent toutes les taxes de vente, d'accise et autres taxes imposées aux produits. Le cycle des relevés commence vers la fin de chaque mois et se termine au milieu du mois suivant. Les prix de la plupart des articles de l'IPC sont recueillis chaque mois, mais certains articles sont observés moins souvent, notamment l'impôt foncier, l'immatriculation d'automobiles, le nettoyage à sec. Cependant, dans le cas des biens et services dont l'observation est prévue à des intervalles de plus d'un mois, on en relèvera le prix dans tout mois où il apparaît qu'une variation importante se produira avant le prochain relevé prévu au calendrier. Les prix des produits alimentaires, qui affichent dans certains cas une grande instabilité d'une semaine à l'autre, sont observés deux fois chaque mois au cours de la première et de la troisième semaine du mois. Ce relevé bimensuel est réalisé dans seize villes et permet dans une large mesure de mieux suivre l'évolution mensuelle des prix pour les produits dont les prix ont tendance à fluctuer sensiblement au cours d'un mois. Le nombre de prix observés dans une ville donnée dépend de l'importance des dépenses de cette ville par rapport au total des dépenses pour le Canada ainsi que de la nature du produit, les observations étant généralement plus fréquentes pour les produits dont les prix varient beaucoup. Le choix des points de vente où les prix doivent être recueillis est fait au jugé (sauf pour les loyers) et l'échantillon a pour but de couvrir les établissements à gros volume de vente.

Pondérations et enchaînement

Les pondérations utilisées dans le calcul de l'indice des prix à la consommation sont mises à jour périodiquement. Ce procédé est nécessaire pour que les pondérations tiennent compte des changements qui s'opèrent au niveau des dépenses à la consommation et, par le fait même, pour que l'indice conserve sont utilité. En conséquence, différents schémas de pondérations sont utilisés pour des périodes de temps distinctes.

The 1978 family expenditure patterns were used to compile the CPI from April 1982 to December 1984. In January 1985 the 1978 weights were replaced by those derived from the expenditure patterns of 1982. This updating continues the policy of updating on a four-year cycle.

La composition des dépenses des familles de 1978 a servi au calcul de l'IPC à partir d'avril 1982 jusqu'à décembre 1984. En janvier 1985, les pondérations de 1978 ont été remplacées par d'autres dérivées de la composition des dépenses de 1982. Cette mise à jour poursuit la politique de Statistique Canada de mettre à jour les pondérations régulièrement à tous les quatre ans.

TEXT TABLE V. Comparison of 1978 and 1982 Expenditure Weights Used in the Consumer Price Index, by Major Component for Canada

TABLEAU EXPLICATIF V. Comparaison des pondérations des dépenses de 1978 et de 1982 utilisées pour l'indice des prix à la consommation, par composante principale pour le Canada

Major components	Weights 1978	Weights 1982
Composantes principales	Pondérations 1978	Pondérations 1982
All-items - Ensemble	100.00(1)	100.00(1)
Food - Aliments Housing - Habitation Clothing - Habillement Transportation - Transports Health and personal care - Santé et soins personnels Recreation, reading and education - Loisirs, lecture et formation Tobacco products and alcoholic beverages - Produits du tabac et	21.11 35.37 9.55 16.26 3.71 8.61	20.02 38.14 8.37 15.75 4.02 8.25

⁽¹⁾ Figures may not add up due to rounding.

The weights shown in Text Table V represent expenditures in 1978 (1978 quantities valued in 1978 prices) and in 1982 (1982 quantities valued in 1982 prices). They cannot be used to reconstruct or reaggregate indexes on a 1981 = 100 time base. The methodology required to permit such a reaggregation can be obtained on request by contacting the:

Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario, K1A OT6 (Telephone: (613) 951-9606).

The indexes based on 1982 weights were linked or connected in December 1984 to the appropriate indexes based on 1978 weights which had been in use since April 1982.

Les pondérations du tableau explicatif V représentent les dépenses en 1978 (quantités et prix de 1978) et en 1982 (quantités et prix de 1982). Elles ne peuvent servir à reconstruire ni à réagréger des indices sur la base de 1981 = 100. La méthode à suivre pour une telle reconstruction peut être obtenue sur demande auprès de la:

Section des prix à la consommation Division des prix, Statistique Canada Ottawa (Ontario) K1A OT6 (Téléphone: (613) 951-9606).

Les indices fondés sur les pondérations de 1982 ont été enchaînés ou raccordés en décembre 1984 aux indices correspondants fondés sur les pondérations de 1978, en usage depuis avril 1982.

⁽¹⁾ Les chiffres ayant été arrondis, les totaux peuvent ne pas correspondre.

This linking procedure ensures that conceptually equivalent series are made continuous over time. It should be noted that the linking method is such that aggregate indexes cannot be considered as the direct average of their respective component indexes. In exceptional cases, this may cause the level, as well as the percentage changes, of an aggregate index to fall slightly outside the range of its component indexes.

Time Base

The All-items Consumer Price Index for Canada and each index city is expressed in terms of 1981 = 100, except for certain items, as noted, where the pricing survey was introduced subsequent to that year. The 1981 = 100 time base became effective with the release of the January 1983 index. The base period for the Consumer Price Index, as well as for other Statistics Canada index series, is revised approximately every 10 years.

Rebasing the CPI is a straightforward arithmetic operation which does not change the picture of economic events. Percentage changes computed will be the same, except for small differences due to rounding, regardless of whether the 1971 = 100 or 1981 = 100 time base is used. Rebasing of the CPI does not involve changes in the base period expenditure weights. Furthermore, the method employed in converting to the 1981 = 100 time base does not affect the continuity or statistical comparability of the index series.

It should be noted, however, that although the percentage changes in an index series will be the same, except for small differences due to rounding, regardless of whether they are computed from the 1971 or 1981 time base series, the same is not true for changes measured in terms of index points.

Current Annual Rate of Change

A rate of change representative of an annual movement in prices may be derived in several ways, none of which is free of shortcomings and interpretational problems. Statistics Canada presently calculates three measures of annual change, the percentage change between any given month and the same month a year ago, the percentage change between annual averages based on a calendar year and the current annual rate of change.

Grâce à cet enchaînement, des séries équivalentes sur le plan conceptuel sont continues dans le temps. On notera que cette méthode d'enchaînement ne permet pas de considérer les indices composés comme des moyennes directes de leur composante respective. Dans des cas exceptionnels, le niveau et les variations en pourcentage d'un indice agrégé peuvent ainsi dépasser légèrement l'étendue des indices composantes.

Période de base

L'indice d'ensemble des prix à la consommation du Canada et les indices de chaque ville sont exprimés sur la base de 1981 = 100, sauf pour certains articles, qui sont signalés et dont l'enquête sur les prix n'a été introduite qu'après cette année là. La base temporelle de 1981 = 100 est devenue effective à partir de la diffusion de l'indice de janvier 1983. La période de base pour l'indice des prix à la consommation, et pour d'autres séries d'indices de Statistique Canada, fait l'objet d'une révision à tous les 10 ans environ.

Pour recalculer la base de l'IPC, il suffit d'effectuer une opération arithmétique simple qui ne modifie pas le tableau des événements économiques. Les variations en pourcentage calculées sur la base 1971 = 100 et 1981 = 100 sont équivalentes, les petites différences étant attribuables à l'arrondissement. Le calcul de la nouvelle base de l'IPC ne change pas les pondérations des dépenses de la période de base. De plus, la méthode de conversion selon la base 1981 = 100 ne compromet pas la continuité ou la comparabilité statistique des séries d'indices.

Toutefois, même si les variations en pourcentage d'une série d'indices seront identiques, à quelques différences d'arrondissement près, quelle que soit la base (1971 ou 1981) utilisée pour les calculer, tel ne sera pas le cas de ses mouvements exprimés en points.

Taux de variation annuel courant

Plusieurs méthodes permettent de dériver un taux de variation pour représenter le mouvement annuel des prix, mais toutes comportent des points faibles et des problèmes d'interprétation. Statistique Canada calcule actuellement trois mesures de la variation annuelle, soit le changement en pourcentage pour un mois donné par rapport à un autre et au mois correspondant de l'année précédente, le changement en pourcentage entre des moyennes annuelles basées sur l'année civile et le taux de variation annuel courant.

The method selected for calculating the current seasonally adjusted annual rate of change in the CPI in Table 1 involves compounding the growth rate over the latest three-month period on the seasonally adjusted level (see Appendix 3). For more information on CPI growth rates, see "A Note on the Current Annual Rate of Change of the Consumer Price Index", Retail Prices and Living Costs - Service Bulletin (Catalogue 62-005), Vol. 4, No. 4, April 1975.

Reconstructed Indexes

With the release of the January 1985 Consumer Price Index, certain series were reconstructed historically to reflect the introduction of the Consumer Classification System of Statistics Canada which was introduced with the 1982 Updating. For further details see The Consumer Price Index Reference Paper, Updating Based on 1982 Expenditures, Catalogue 62-553 (Occasional).

Revised City Indexes

With the release of the October 1978 Consumer Price Index, certain city indexes were reconstructed historically to correct for methodological differences which previously existed in the construction of these indexes at the Canada and city levels. As a result of these revisions, city indexes published prior to October 1978 are not compatible with the present official series which starts in January 1971.

Continuous time series can, however, be derived through the application of various conversion factors. For further details, consult the Consumer Prices Section at the address below.

The latest updating of expenditure weights is applicable strictly to the present revised official series.

Whitehorse and Yellowknife

In keeping with its commitment to publish consumer price indexes for at least one urban centre in each province and territory, Statistics Canada, as part of the 1978 Updating, began to develop consumer price indexes for the urban centres of Whitehorse and Yellowknife. As no Family Expenditure Survey was conducted in these centres in 1978, 1972 expenditure patterns for these two centres were extrapolated to 1978 using the change in expenditure patterns between

La méthode retenue pour calculer le taux de variation annuel courant après désaisonnalisation de l'IPC au tableau 1 consiste à prendre un taux de croissance composé sur le niveau désaisonnalisé des trois derniers mois (voir appendice 3). Pour plus de renseignements sur le taux de croissance de l'IPC, se reporter à "Note sur le taux annuel courant de l'indice des prix à la consommation", **Prix de détail et coût de la vie** Bulletin de service (n° 62-005 au catalogue), vol. 4, n° 4, avril 1975.

Indices reconstruits

À compter de l'émission de l'indice des prix à la consommation de janvier 1985, certaines séries historiques ont été reconstruites de façon à ce qu'elles représentent l'introduction du système de classification de la consommation de Statistique Canada qui fut introduit avec la mise à jour de 1982. Pour plus de renseignements, voir le "Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, nº 62-553 au catalogue (hors-série).

Révision des indices des villes

Avec la diffusion de l'indice des prix à la consommation d'octobre 1978, certains indices historiques des villes ont été reconstruits pour supprimer les différences méthodologiques qui existaient au niveau de la construction de ces indices pour le Canada et les villes. Par suite de ces révisions, les indices des villes publiés avant octobre 1978 sont incompatibles avec la série officielle actuelle qui commence en janvier 1971.

Toutefois, une série chronologique continue peut être calculée à l'aide de différents facteurs de conversion. Pour plus de renseignements, consulter la Section des prix à la consommation à l'adresse donnée plus loin.

La dernière mise à jour des pondérations des dépenses s'applique uniquement à l'actuelle série officielle révisée.

Whitehorse et Yellowknife

Statistique Canada, conformément à son engagement de publier des indices des prix à la consommation pour au moins un centre urbain dans chaque province et territoire, a commencé à élaborer des indices de prix à la consommation pour les centres urbains de Whitehorse et Yellowknife dans le cadre de la mise à jour de 1978. Puisqu'il n'y a pas eu dans ces centres d'enquête sur les dépenses des familles en 1978, les données sur la composition des dépenses de 1972 pour ces deux villes ont été extrapolées pour l'année 1978 en

1972 and 1978 in other urban centres. As the 1978 expenditure patterns were incorporated into the official CPI, commencing with the release of the April 1982 index, consumer price indexes for Whitehorse and Yellowknife were developed on a March 1982=100 time reference base. Since the expenditure patterns for Whitehorse and Yellowknife were derived and not directly observed, the indexes for these two urban centres were not included in the calculation of the official CPI for Canada. With the introduction of the 1982 Updating, these two centres are included in the calculation of the official CPI for Canada.

It was not possible, at this time, to develop an owned accommodation index for these two centres comparable to that in concept of the national CPI. The nature and the relatively small size of the housing market in these two centres is such that Statistics Canada was unable to construct reliable price indexes for new houses. It was decided that as an interim and only available alternative measure, the price movement of rental accommodation would be used to represent that of owned accommodation. As a consequence, the All-items indexes published for these centres are not comparable to those for Canada or for any of the sixteen urban centres for which a CPI is produced. The rent data used are collected on a quarterly basis by the respective territorial governments. For rents, the data are incorporated into the consumer price indexes for these two centres with a two-month lag.

Additional Information and Related Publications

Detailed information on the methodology and concepts of the CPI is contained in The Consumer Price Index, Reference Paper, Updating Based on 1982 Expenditures, (Occasional), Catalogue 62-553. Information regarding the Family Expenditure Surveys is contained in two volumes: Family Food Expenditure, 1982, Catalogue 62-554; and Family Expenditure in Canada, 1982, Catalogue 62-555.

The latest information on the Consumer Price Index for Canada and 18 cities is also available in the **Consumer Price Index**, Catalogue 62-001 monthly. In addition, selected educational and promotional material are available. For these and further information contact the Consumer Prices Section, Prices Division, Statistics Canada, Ottawa, Ontario K1A OT6 (613-951-9606 or 613-951-9607).

se fondant sur l'évolution de la composition des dépenses entre 1972 et 1978 dans d'autres centres urbains. Étant donné que la composition des dépenses de 1978 a été incorporée dans l'IPC officiel à la consommation avec l'indice d'avril 1982, les indices des prix à la consommation pour Whitehorse et Yellowknife ont été élaborés sur la base mars 1982=100. La composition des dépenses pour Whitehorse et Yellowknife ayant été dérivée plutôt qu'observée directement, les indices pour ces deux centres urbains n'étaient pas compris dans le calcul de l'IPC officiel pour le Canada. Avec l'introduction de la mise à jour de 1982, ces deux centres sont maintenant pris en compte lors du calcul de l'IPC officiel pour le Canada.

Il n'a pas été possible d'élaborer, pour ces deux centres, un indice du logement en propriété qui soit conceptuellement comparable à celui incorporé à l'IPC national. La nature et la petitesse relative du marché de l'habitation dans ces deux centres ont empêché Statistique Canada de construire des indices de prix fiables pour les maisons neuves. Comme c'est la seule mesure disponible, il a été décidé d'utiliser, pour le moment, le mouvement des prix du logement en location pour représenter celui du logement en propriété. En conséquence, les indices d'ensemble publiés pour ces centres ne sont pas comparables à ceux du Canada ou d'aucun des seize autres centres urbains pour lesquels un IPC est calculé. Les données sur les loyers utilisées sont recueillies trimestriellement par les deux administrations publiques territoriales. S'agissant des loyers, les données pour ces deux centres sont incorporées aux indices de prix à la consommation avec deux mois de retard.

Renseignements supplémentaires et publications connexes

Le Document de référence de l'indice des prix à la consommation, mise à jour fondée sur les dépenses de 1982, (hors-série), nº 62-553 au catalogue, décrit en détail les méthodes et les concepts de l'IPC. Des renseignements au sujet des enquêtes sur les dépenses des familles se retrouvent dans deux volumes distincts: Dépenses alimentaires des familles au Canada, 1982, nº 62-554 au catalogue; et Dépenses des familles au Canada, 1982, nº 62-555 au catalogue.

De plus, les derniers renseignements sur l'indice des prix à la consommation du Canada et de 18 villes sont publiés dans le bulletin mensuel **L'indice des prix à la consommation**, n^o 62-001 au catalogue. De plus, certains documents éducatifs et publicitaires sont disponibles. Pour plus de renseignements, communiquer avec la Section des prix à la consommation, Division des prix, Statistique Canada, Ottawa (Ontario) K1A 0T6 (613-951-9606 ou 613-951-9607).

THE PURCHASING POWER OF THE CONSUMER DOLLAR

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

Changes in the purchasing power of the consumer dollar, put simply, are inversely related to movements in the Consumer Price Index. For example, between 1981 and February 1983, consumer prices as measured by the CPI rose 14.6% such that, goods and services which could have been purchased for \$100.00 in 1981 would cost \$114.60 in February 1983. Each consumer dollar in February 1983 therefore buys less than in 1981. The extent to which the purchasing power of the dollar has declined is matched precisely by the increase in the consumer price index. Thus the purchasing power of a dollar in February 1983 compared to the 1981 dollar was 87.3 (100 cents X $\frac{100.0}{114.6}$ = 87.3 cents). This process may be interpreted as the deflation of money, that is, adjusting values expressed in monetary terms in order to eliminate price effects.

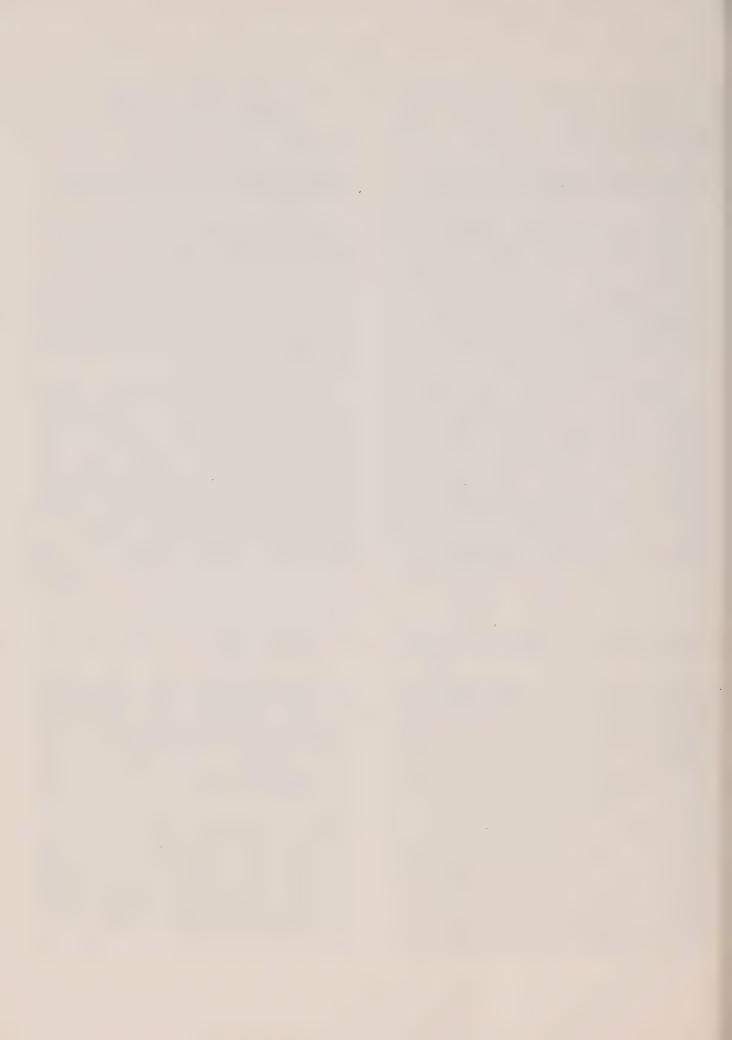

Users of the tabulation which shows the purchasing power of the consumer dollar compared to the 1981 dollar at different points in time (Table 2) should note that, as in the case of the Consumer Price Index from which the numbers are derived, the data may not measure closely the experiences of any one specific family within the large urban group to which the CPI relates. At the same time changes in the purchasing power of the dollar are not expected to match the experience of other population groups whose expenditure behaviour is significantly different from those associated with the CPI target population. It should also be noted that like the CPI, changes in the purchasing power of the dollar are not directly affected by changes in income taxes, unemployment insurance premiums, other types of security payments and all other goods and services that are not included in the CPI basket.

LE POUVOIR D'ACHAT DU DOLLAR DE CONSOMMATION

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent, la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie et la baisse des prix est liée à la hausse du pouvoir d'achat.

En somme, le pouvoir d'achat du dollar de consommation varie en relation inverse avec les mouvements de l'indice des prix à la consommation. Par exemple, entre 1981 et février 1983, les prix à la consommation mesurés par l'IPC ont grimpé de 14.6% de sorte que les biens et services qu'on pouvait acheter en 1981 avec \$100.00 coûtaient \$114.60 en février 1983. Chaque dollar de consommation en février 1983 achète donc moins qu'en 1981. Le pouvoir d'achat du dollar a baissé exactement dans la même proportion que l'indice des prix à la consommation a augmenté. Par conséquent, le pouvoir d'achat d'un dollar en février 1983, par rapport au dollar de 1981, s'établissait à 87.3 cents (100 cents X $\frac{100.0}{114.6}$ = 87.3 cents). Ce processus peut être assimilé à la déflation de l'argent, c'est-à-dire à la correction des valeurs monétaires afin d'éliminer l'influence des prix.

Les utilisateurs des totalisations qui indiquent le pouvoir d'achat du dollar de consommation à différentes périodes par rapport à 1981 (tableau 2) doivent noter que ces chiffres sont tirés de l'indice des prix à la consommation et qu'ils peuvent, tout comme ce dernier, ne pas mesurer fidèlement la situation particulière d'une famille faisant partie du grand groupe urbain auquel se rapporte l'IPC. Par ailleurs, les variations du pouvoir d'achat du dollar ne reflètent pas les changements touchant les autres groupes de population dont les habitudes de dépenses diffèrent sensiblement de celles du groupe cible pour l'IPC. Il faut également noter que, tout comme l'IPC, les variations du pouvoir d'achat du dollar ne sont pas touchées directement par les changements de l'impôt sur le revenu, des primes d'assurance-chômage, d'autres paiements de sécurité sociale et des prix de tous les autres biens et services ne faisant pas partie du panier de l'IPC.

Appendice 3

SEASONAL ADJUSTMENT OF THE CONSUMER PRICE INDEX

Economic time series, measuring changes through time in economic activities, reflect the combined effects of the underlying seasonal, cyclical, trend and irregular factors which influence them. Such series can be decomposed into distinct movements representing the separate effects of the seasonal, cyclical and trend factors and a residual movement representing factors causing irregular non-repetitive movements.

Seasonal fluctuations in a series are those that can be identified with a particular season or time of year. These fluctuations tend to occur at about the same time each year with roughly the same magnitude and are the composite result of climatic influences and social and commercial customs (e.q., harvests, end of season sales).

Cyclical movements consist of sequences of change over periods longer than a year, during which the series rises to a peak and then falls back, subsequently to rise again. For many series this type of movement is associated with expansion and contraction of the economy over the "business cycle".

The trend is a steady underlying movement which reflects continuing or slowly changing economic forces.

Finally, the fluctuations that remain unaccounted for by the seasonal, cyclical and trend movements of a series are termed irregular. The factors causing irregular movements in a series are of a non-repetitive, ad-hoc nature. The irregular component tends to have a stable random appearance, but may include some extreme movements having identifiable causes (e.g., strikes or severe weather). They therefore can be distinguished from the much smaller random irregular variations.

The methodologies used for removing as much of the seasonal fluctuations as possible from a series have been described in detail in numerous articles and texts on the

LA DÉSAISONNALISATION DE L'INDICE DES PRIX À LA CONSOMMATION

Les séries chronologiques économiques mesurent l'évolution dans le temps de l'activitié économique. Ces séries reflètent les effets combinés de la saisonnalité, du cycle, de la tendance générale et d'autres facteurs accidentels qui leur sont propres et qui agissent sur elles. Il est possible de décomposer de telles séries ou mouvements distincts représentant séparément les effets de tel ou tel facteur (saisonnalité, cycle, tendance) et en un mouvement résiduel représentant les facteurs de mouvements accidentels (non répétitifs).

Les fluctuations saisonnières d'une série sont celles que l'on peut relier à une saison ou une période donnée de l'année; elles ont tendance à se produire généralement à peu près à la même époque de l'année et avec la même ampleur. Elles sont le résultat à la fois de conditions climatiques et d'habitudes sociales et commerciales (telle les récoltes, les ventes de fin de saison).

Les mouvements cycliques se définissent comme une suite de variations sur des périodes supérieures à un an, au cours desquelles la série atteint un sommet, descend puis remonte à nouveau. Ce type de mouvement est associé, pour de nombreuses séries, à l'expansion et à la récession économique au cours du "cycle économique".

La tendance générale est un mouvement fondamental stable qui reflète la continuité ou un changement lent de l'économie.

Enfin, les fluctuations qui ne se classent ni dans la saisonnalité, ni dans le cycle, ni dans la tendance générale sont désignées comme mouvements accidentels. Les facteurs expliquant ce type de mouvement dans une série sont de nature spéciale et non répétitive. L'élément accidentel tend à présenter une apparence aléatoire stable mais il peut comprendre certains mouvements extrêmes, dont on peut identifier les causes (comme des grèves ou de fortes intempéries). Ils peuvent donc être distingués des variations irrégulières aléatoires beaucoup moins prononcées.

Les méthodes utilisées pour éliminer le plus possible de saisonnalité d'une série ont fait l'objet de descriptions détaillées dans de nombreux articles et ouvrages sur la quessubject.(1) Rather than reiterating those texts, an outline of the methodologies employed in the derivation of seasonally adjusted consumer price indexes for Canada is provided below.

With the introduction of the 1982 basket. the seasonal adjustment methodology was changed. Direct seasonal adjustment is now performed at the level of the seven major components with the seasonally adjusted All-items and All-items excluding Food indexes being the weighted average of their components. This indirect seasonal adjustment of the two aggregate series ensures (except for possible rounding differences) that the aggregate movements will be within the range of their components' movements. Since each basket has its own weights, the move to indirect seasonal adjustment of the aggregates dictated the use of unlinked series as the basis for the seasonal adjustment. Estimating a separate seasonal pattern for each basket has some conceptual advantages since it means that the classification and weight changes introduced with each updating of the basket will not distort the estimates. However, there is an operational difficulty which arises due to the desirability of having seven years of data for estimation of the seasonal pattern and the current rapidity with which CPI baskets are updated. The difficulty arises with the most recent (1982) basket as we only have three years of data based on this basket. The length of this series is due to the accelerated introduction of the 1982 basket. To create a longer time series, we have chained backwards from 1982 to 1978 unlinked data from the 1978 basket. This reintroduces some of the distortions present in estimating seasonal patterns from linked data.

The above distortion will be minimized through the use of concurrent seasonal adjustment rather than forecast seasonal factors. With the concurrent methodology, the seasonal pattern is estimated each month using all available data. However, to minimize revisions we will revise past indexes only at the end of each calendar year.

The seasonally adjusted price movements published in our publications are based on the series using the 1982 basket chained back to 1978. These data are based on indexes with a time base of 1982 = 100 and are not consistent with the published raw data prior to January 1985.

tion(1). Au lieu d'en reprendre ici le contenu, nous présentons ci-dessous les grandes lignes des méthodes utilisées pour dériver les indices des prix à la consommation désaisonnalisés pour le Canada.

Avec l'introduction du panier 1982, la méthode de désaisonnalisation fût changée. La désaisonnalisation directe est maintenant effectuée à l'échelle des sept composantes principales; les versions désaisonnalisées de l'indice des aliments et de l'indice d'ensemble sans les aliments correspondent à la moyenne pondérée de leurs composantes. Cette désaisonnalisation indirecte des deux séries agrégées garantit que les mouvements agrégés se situeront dans les limites des mouvements de leurs composantes (exception faite des différences attribuables à l'arrondissement). Puisque chaque panier a ses propres coefficients de pondération, le passage à la méthode indirecte de désaisonnalisation des séries agrégées a entraîné l'utilisation, à titre de base de la désaisonnalisation, des séries non enchaînées. L'estimation de tendances saisonnières distinctes pour chacun des paniers représente certains avan-tages au point de vue conceptuel, puisqu'elle signifie que les changements apportés à la classification et aux coefficients de pondération au moment de la mise à jour du panier n'entraîneront aucune distortion. Toutefois, une difficulté opérationnelle existe étant donné, d'une part, qu'il est souhaitable d'avoir sept années de données pour estimer la tendance saisonnière et, d'autre part, en raison de la rapidité avec la-quelle on met maintenant à jour le panier de l'IPC. Cette difficulté se pose à l'égard du dernier panier (1982), car nous ne disposons que de trois années de données s'y rapportant. durée de cette série s'explique par l'introduction accélérée du panier de 1982. Dans le but de créer une série plus longue, nous avons enchaîné rétrospectivement, de 1982 à 1978, les données non enchaînées du panier de 1978. Cette mesure ramène certaines distorsions que l'on retrouvait dans l'estimation des tendances saisonnières des données enchaînées.

Ces distortions seront toutefois minimisées par l'utilisation de désaisonnalisations concomitantes plutôt que de coefficients saisonniers projetés. Dans la méthodologie concomitante, la tendance saisonnière est estimée chaque mois au moyen de toutes les données accessibles. Nous ne recalculerons toutefois les indices antérieurs qu'à la fin de chaque année civile, et ce pour réduire au minimum le nombre de révisions.

Les mouvements désaisonnalisés des prix qui paraissent dans nos publications se fondent sur les séries qui utilisent le panier de 1982 enchaîné rétrospectivement jusqu'à 1978. Ces données s'appuient sur les indices dont la période de base est 1982 = 100, et elles ne sont pas conformes aux données brutes publiées avant janvier 1985.

CITY AVERAGE RETAIL PRICES

Introduction

The Average Retail Price Survey is undertaken to produce an accurate measure of average prices at one point in time which will permit comparison between cities. In order not to generate artificial price differentials it is essential that the qualities, brands and sizes selected are sufficiently similar. Prices of approximately 60 items, consisting mainly of food and some personal care items and household supply items are collected in representative outlets in 26 cities. These cities are: St. John's. Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria and Whitehorse. This survey is normally undertaken during the first week of January, April, July and October.

In order that the average prices generated for one city will be comparable with those for another city, price collection is generally limited to widely available manufacturers' brands. For meat and produce, care is taken to narrowly define cuts and qualities. The appropriate provincial retail sales tax is included in the retail price averages for those items subject to provincial retail sales tax.

Calculation Methodology

City Prices. Prices are collected in both chain and independent stores. (A chain stores organization is defined as one operating four or more stores under the same legal ownership.) A city average price is calculated for each item by weighting the average prices obtained for chain and independent stores according to their overall market sales share in that city. For branded items sold under brand labels, an average price for each brand is first calculated in the manner described above; the brand averages are then weighted together to form the item average. The weight assigned each brand in this process is proportionate to the number of price quotes obtained for each of the brands in that city.

Appendice 4

PRIX DE DÉTAIL MOYENS PAR VILLE

Introduction

L'enquête sur les prix moyens de détail est effectuée afin d'obtenir une mesure adéquate des prix moyens, à une période donnée, qui permette une comparaison entre les villes. Il est essentiel que les qualités, les marques et les tailles choisies soient suffisamment équivalentes afin de ne pas introduire des différences de prix artificielles. Les prix de quelques 60 articles, principalement des produits alimentaires, certains articles de soins personnels et des fournitures de ménage, sont relevés dans de nombreux points de vente dans 26 villes: St. John's, Halifax, Sydney, Charlottetown, Moncton, Saint John, Chicoutimi, Québec, Trois-Rivières, Sherbrooke, Montréal, Hull, Ottawa, Toronto, Hamilton, London, Sudbury, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Vancouver, Victoria et Whitehorse. Cette enquête est normalement effectuée durant la première semaine de janvier, d'avril, de juillet et d'octobre.

Afin que les prix moyens calculés pour une ville puissent être comparables à ceux d'une autre ville, l'observation des prix se limite généralement aux marques des fabricants largement distribuées. Dans le cas de la viande, des fruits et des légumes, on prend soin de définir avec précision les morceaux et les qualités. La taxe de vente au détail est ajoutée au prix de détail moyen des articles qui sont frappés par une taxe provinciale de vente au détail.

Méthode de calcul

Prix urbains. Les prix sont recueillis dans les magasins à succursales multiples et les magasins indépendants. (Une entreprise à succursales multiples est définie comme celle qui exploite quatre magasins ou plus sous la même raison sociale.) On calcule un prix moyen par ville pour chaque article en pondérant les prix moyens recueillis dans les magasins à succursales multiples et dans les magasins indépendants selon la part de leurs ventes sur le marché général dans leur ville. Dans le cas ces articles vendus sous marque déposée, on calcule d'abord un prix moyen pour chaque marque déposée de la façon décrite plus haut: ensuite on pondère ensemble les moyennes des marques déposées afin d'en arriver à la moyenne pour l'article. Le poids assigné à chaque marque déposée lors de ce processus est proportionnel au nombre de prix observés dans la ville en question pour cette marque déposée.

Weighted city averages. A weighted city average price for each item is derived by weighting the relevant city averages. The importance of each city in calculating the weighted city average is determined by the volume of retail sales in that city.

Item Specifications

A description of the approximately 60 items covered in the Average Prices Survey can be acquired by contacting Prices Division.

Average Retail Prices for Gasoline

Tables 15 through 20 present average retail prices for three types of gasoline retailed in two types of filling stations. The information is collected on a monthly basis as part of the Consumer Price Index survey. Gasoline prices are collected at the pump from a sample of full service and self-serve filling stations in major urban centres across Canada. The prices collected included all applicable Federal and Provincial taxes. They are presented as average prices per litre of gasoline. The series presented in these tables are confined to the 16 urban centres for which Consumer Price Indexes are produced and cover the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to January 1979, are, however, based on the average prices per imperial gallon.

Average Retail Prices for Fuel Oil

Table 21 presents average retail prices for fuel oil. The information is collected nine times yearly as part of the Consumer Price Index Survey. Fuel oil prices are collected from a sample of distributors in major urban centres across Canada. The prices collected include all applicable Federal and Provincial taxes. They are presented as average prices per litre. The series presented in Table 21 are confined to 16 urban centres and for the time period January 1986 to the latest available. Data for previous time periods (for some urban centres going back to January 1957) and for an expanded number of urban centres are available upon request. The prices available for the time series prior to October 1980 are, however, based on the average prices per imperial gallon.

Moyennes pondérées des villes. Une moyenne pondérée du prix de chaque article pour l'ensemble des villes est calculée en pondérant les moyennes appropriées des villes. L'importance de chaque ville dans le calcul de la moyenne pondérée des villes est déterminée par le volume des ventes au détail dans cette ville.

Spécification des articles

Une description des quelques 60 articles contenus dans l'enquête des prix moyens peut être obtenu en communiquant avec la Division des prix.

Prix de détail moyens de l'essence

Les tableaux 15 à 20 présentent les prix de détail moyens de trois types d'essence vendus dans deux genres de stations. Cette information est relevée à chaque mois dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix de l'essence sont relevés, sur place, auprès d'un échantillon de stations offrant un service complet et de stations libre service dans les principaux centres urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ces tableaux sont ceux d'un litre d'essence. Les séries présentées se limitent aux 16 centres urbains pour lesquels on produit un IPC pour la période allant de janvier 1986 jusqu'au dernier mois disponible. Les données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant janvier 1979 sont, toutefois, sur la base d'un gallon impérial.

Prix de détail moyens du mazout

Le tableau 21 présente les prix de détail moyens du mazout. Cette information est relevée neuf fois par année dans le cadre de l'enquête de l'indice des prix à la consommation. Les prix du mazout sont relevés auprès d'un échantillon de distributeurs dans les principaux centre urbains du Canada. Les prix comprennent toutes les taxes fédérales et provinciales. Les prix moyens contenus dans ce tableau sont ceux d'un litre. Les séries présentées au tableau 21 se limitent à 16 centres urbains, pour la période allant de janvier 1986 jusqu'au dernier mois disponible. données se rapportant aux périodes précédentes (remontant jusqu'à janvier 1957 pour certains centres urbains) et pour un plus grand nombre de centres urbains sont disponibles sur demande. Les séries avant octobre 1980 sont, toutefois, sur la base d'un gallon impérial.

INTERNATIONAL RETAIL PRICE COMPARISONS

Those concerned with a need for some comparative measure of the retail prices that a Canadian-based employee may encounter while serving outside Canada, will be interested to know that the Government Allowance Indexes Section, Statistics Canada, produces indexes relating retail prices in foreign countries to those prevailing in Ottawa. The "post indexes" as they are called have been developed primarily to regulate the allowance levels of expatriate Canadian Government civilian and military personnel and because of this, they are very specialized in purpose, and specific to the use for which they were designed. Nonetheless, organizations faced with compensating employees for foreign retail price conditions might well find them to be a useful building-block on which to develop and administer a viable foreign service allowance system.

A post index is, at any given point in time, the expression of the current spatial (or place-to-place) retail price relationship of a range of goods and services at a foreign location, with those prices prevailing in Ottawa, rounded to the nearest five points. Ottawa price levels are always expressed as 100. Thus, a post index of 110 for example, means that prices at the foreign location are estimated to be 10% above those in Ottawa, and specifically, that they have been calculated to fall within the index range 107.5 to 112.4, i.e., 7.5% to 12.4% above Ottawa. For reasons discussed later, the highest degree of accuracy claimed for post indexes, is inherent in their being rounded as described.

The post index encompasses price comparisons for such family expenditure categories as food consumed in the home, meals taken in restaurants, household maintenance, household supplies, communications, domestic help, clothing, transporation, health and personal care, reading and recreation, the prices of some 230 items being considered, as indicated in the table hereunder. Several important elements of expenditure are excluded. Since Canadian public servants pay Canadian income taxes regardless of their place of duty, income tax differentials are not considered. Shelter and fuel and utilities expenditures are excluded from the comparison because the federal government compensates for excess costs of these

COMPARAISONS INTERNATIONALES DES PRIX DE DÉTAIL

Les personnes qui sont conscientes du besoin d'une mesure comparative des prix de détail auxquels peut faire face un employé canadien en poste à l'étranger seront intéressées d'apprendre que la Section des indices des indemnités de l'état de Statistique Canada produit des indices qui établissent le rapport entre les prix de détail dans les pays étrangers et ceux d'Ottawa. Les "indices de poste" ont été créés à l'origine afin de fixer le niveau des indemnités aux fonctionnaires et aux militaires canadiens postés à l'étranger: en conséquence, ils ont un but très spécialisé et ne s'appliquent qu'à l'utilisation pour laquelle ils ont été créé. Toutefois, les organismes qui doivent verser des indemnités à des employés en vertu des prix de détail à l'étranger pourraient trouver les indices comme une base utile pour élaborer et administrer un système viable d'indemnités pour service à l'étranger.

Un indice de poste est, à une période donnée, l'expression de la relation spatiale actuelle (ou d'un endroit à un autre) entre le prix de détail d'une variété de biens et services à un endroit à l'étranger et les prix à Ottawa, arrondis au plus proche multiple de cinq. Le niveau des prix à Ottawa est toujours 100. Ainsi, un indice de poste de 110 signifie que l'on évalue les prix à un endroit situé à l'étranger à 10% au-dessus de ceux d'Ottawa et plus précisément que l'on a calculé qu'ils tombaient dans la classe d'indice 107.5 à 112.4; c'est donc dire qu'ils sont de 7.5% à 12.4% supérieurs à ceux d'Ottawa. Pour les raisons ci-après, le plus haut degré de précision dont on puisse se prévaloir pour les indices de poste est fonction de ce qu'ils ont été arrondis comme il est dit ci-dessus.

L'indice de poste renferme des comparaisons de prix pour les catégories de dépenses des familles comme les aliments consommés à la maison, les repas pris au restaurant, l'entretien du ménage, les fournitures ménagères, les communications, le personnel domestique, les vêtements, le transport, les soins personnels et de santé, la lecture et les loisirs; on compare les prix de 230 articles environ, tels que présentés ci-dessous. Plusieurs éléments importants de dépenses sont exclus. Les fonctionnaires canadiens paient leur impôt sur le revenu au Canada, quel que soit le lieu de leur travail; les différences concernant l'impôt sur le revenu ne sont donc pas prises en considération. Les dépenses de logement, de chauffage et de services ne font pas partie de la comparaison parce que l'administration publique items by means of benefits separate from those regulated by statistical means. Finally, government employees serving abroad may be entitled to purchase liquor, cigarettes, gasoline, etc., at tax-free prices or they may have access to special purchasing facilities not available to the public at large. To the extent that these conditions prevail, they are reflected in post index calculations.

Accordingly, post indexes should not be automatically applied to general uses without regard to their possible limitations. Potential users of these indexes are advised to discuss the specifics of their needs with the Government Allowance Indexes Section, and they may also wish to familiarize themselves with the total foreign service benefit package provided by the Federal Government, details of which may be obtained from the Personnel Policy Branch, Treasury Board, Government of Canada.

The primary sources of data used in post index construction are periodic retail price and living cost surveys conducted at foreign locations by the foreign service personnel stationed there. The survey data is analyzed by Statistics Canada. In addition to a variety of price information gathered from retail outlets patronized by Canadian personnel at the post, data are also obtained regarding their spending patterns, along with information on the availability of any special local purchasing facilities, and the extent to which staffs make direct importation of consumer goods from other countries.

The general aim is for full-scale surveys to be carried out at about three-year intervals. However, specific studies may be undertaken more or less frequently than this, depending on the volatility of retail price conditions in each particular country, the instability of exchange rates and the extent to which close monitoring of changes in the local retail price situation being faced by Canadian personnel can be achieved through reference to other statistical indicators.

Once established, every post index is subjected to a monthly review, the object being to assess its continuing validity in the light of exchange rate movements, as well as on the basis of price and other economic intelligence obtained from various sources. Statistics Canada is in monthly receipt of an extensive range of price data from foreign governments, international agencies, and world-wide commercial enterprises. The purpose of the data collection is to assess and apply the most accurate possible measurement of price movements at each foreign post since the time of the last survey. In parallel, Ottawa price movements

fédérale compense les dépenses excessives à cet égard à l'aide de prestations déterminées par des moyens autres que statistiques. Enfin, les fonctionnaires en poste à l'étranger ont parfois le droit d'acheter en franchise des boissons alcoliques, des cigarettes, de l'essence, etc., ou ils ont accès à des magasins spéciaux fermés au grand public. Ces conditions réapparaissent plus ou moins fortement lors du calcul des indices de poste.

Les indices de poste ne doivent donc pas être généralisés automatiquement sans tenir compte de leurs limites éventuelles. Nous conseillons à tous ceux qui utiliseraient cet indice de discuter leurs besoins spécifiques avec la section des indices des indemnités de l'état; ceux-ci peuvent également désirer se familiariser avec l'ensemble complet des bénéfices accordés par le gouvernement fédéral pour le service à l'étranger; ils pourront obtenir cette information en s'adressant à la Direction de la politique du personnel, Conseil du Trésor, gouvernement du Canada.

Les principales sources des données qui servent à la création de l'indice de poste sont des enquêtes périodiques sur les prix de détail et le coût de la vie menées dans les divers postes par le personnel du service extérieur. Les résultats de ces enquêtes sont analysés et compilés par Statistique Canada. Non seulement on recueille divers renseignements sur les prix auprès des points de vente au détail où le personnel canadien en poste à l'étranger s'approvisionne, mais encore on se procure des données sur les habitudes de dépenses, des renseignements relatifs à l'existence de points d'achat spéciaux sur place et au volume des importations directes de biens à la consommation effectuées par le personnel dans d'autres pays.

On se propose généralement de mener une enquête exhaustive une fois tous les trois ans environ. Toutefois, des études spécifiques peuvent être menées à intervalles plus ou moins rapprochés en fonction, du degré d'instabilité des conditions des prix de détail dans chaque pays et des taux de change compte tenu de ce qu'une surveillance étroite des changements de la situation locale des prix de détail peut être exercée au moyen d'autres indicateurs statistiques.

Une fois établi, chaque indice de poste est révisé tous les mois afin de s'assurer qu'il est encore valable compte tenu des variations des cours de change, des prix et d'autres renseignements d'ordre économique obtenus de diverses sources. Statistique Canada reçoit chaque mois une grande variété de données sur les prix provenant des gouvernements étrangers, des organismes internationaux et des entreprises commerciales du monde entier. La collecte de ces données doit permettre de calculer avec le plus de précision possible l'évolution des prix à chaque poste étranger depuis la dernière enquête. Parallèlement, on tient compte de l'évolution des prix à Ottawa pour la même période. De plus, comme les

for the same period are also taken into account. Furthermore, since post indexes relate to personnel whose emoluments are expressed in Canadian dollars, shifts in the Canada foreign country currency exchange rate are an integral part, and in some cases the major element, in the review. If the comparative retail price relationship expressed by an existing post index should appear to have changed by five index points, a new post index level may be brought into effect without necessarily undertaking another complete survey.

In developing any place-to-place statistics of retail price differentials, very difficult problems arise from geographic variations in consumers' buying habits and differences in the quality and availability of goods and services. These problems are magnified in international comparisons. By and large, however, conventions and techniques have been developed which attempt to overcome these problems in the context of the specific uses that these indexes are meant to serve. As measures designed to meet a particular administrative need, post indexes achieve their goal if they fairly reflect, in a general way, the price differentials between locations being encountered by those to whom they are applicable.

Table 7 shows a selection of the approximately 250 post indexes currently being maintained, the effective date of their validity for government allowance purposes, and the exchange rates upon which they are predicated.

Readers should bear in mind that these indexes are shown as examples only, and that any one of them may have changed by the time it could be published.

Further information regarding post indexes is available on request from the Government Allowance Indexes Section, Prices Division, Statistics Canada, telephone: (613) 951-0120.

indices de poste concernent un personnel dont le traitement est exprimé en dollars canadiens, les variations du cours du change canadien dans le pays étranger en question font partie intégrante de la revision et en sont, dans certains cas, l'élément le plus important. Lorsqu'il apparaît que la relation comparative des prix de détail, exprimée par l'indice actuel du poste a changé de cinq points d'indice, un nouvel indice de poste peut être adopté sans que l'on décide nécessairement de mener une nouvelle enquête complète.

Lors de l'élaboration de statistiques comparatives des prix de détail en divers endroits, des problèmes très difficiles surgissent en raison des variations géographiques dans les habitudes d'achat à la consommation et dans les différences de qualité et de disponibilité des biens et services. Les problèmes se compliquent encore lorsqu'il s'aqit de comparaisons internationales. Dans une très large mesure cependant, des conventions et des techniques ont été mises au point en vue de résoudre ces problèmes dans le contexte même de l'usage spécifique auquel ces indices sont destinés. En tant que mesures destinées à satisfaire un besoin administratif particulier, les indices de poste joueront leur rôle s'ils rendent généralement bien compte des différences de prix entre différents endroits auxquelles font face des personnes à qui ces indices s'appliquent.

Le tableau 7 présente un sélection des quelques 250 indices de poste, leur date d'entrée en vigueur dans le cadre du programme des indemnités de l'état, et les taux de change sur lesquels ils ont été établis.

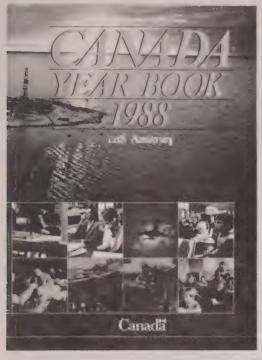

Le lecteur devra noter que ces indices ne sont fournis qu'à titre d'exemple seulement, et que chacun d'entre eux a pu changer au temps où on a pu le publier.

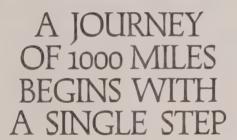

On peut obtenir d'autres renseignements au sujet des indices de poste en s'adressant à la section des indices des indemnités de l'état, division des prix, Statistique Canada, téléphone: (613) 951-0120.
